Package ‘cummeRbund’

March 26, 2013

Title  Analysis, exploration, manipulation, and visualization of Cufflinks high-throughput sequencing data.

Version  2.0.0

Date  2012-05-04

Author  L. Goff, C. Trapnell, D. Kelley

Description  Allows for persistent storage, access, exploration, and manipulation of Cufflinks high-throughput sequencing data. In addition, provides numerous plotting functions for commonly used visualizations.

Imports  methods, plyr, BiocGenerics

Depends  
R (>= 2.7.0), BiocGenerics (>= 0.3.2), RSQLite, ggplot2, reshape2, fastcluster, rtracklayer, Gviz

Suggests  cluster, plyr

Maintainer  Loyal A. Goff <lgoff@csail.mit.edu>

License  Artistic-2.0

LazyLoad  yes

biocViews  HighThroughputSequencing, HighThroughputSequencingData, RNAseq, RNAseq-Data, GeneExpression, DifferentialExpression, Infrastructure, DataImport, DataRepresentation, Visualization, Bioinformatics, Clustering, MultipleComparisons, QualityControl

Further information is available in the following vignettes:
**addFeatures**

An R package for visualization and analysis of Cufflinks high-throughput sequencing data (source, pdf)

~~ An overview of how to use the package, including the most important ~~ ~~ functions ~~

**Author(s)**

L. Goff, C. Trapnell
Maintainer: Loyal A. Goff <lgoff@csail.mit.edu>

**References**

~~ Literature or other references for background information ~~

---

**Description**

Adds a data.frame of features to a the SQLite backend database.

**Usage**

```r
## S4 method for signature 'CuffSet'
addFeatures(object, features, level="genes", ...)
```

**Arguments**

- `object`: An object of class ('CuffSet' or 'CuffData')
- `features`: A data.frame of features to add. 1st column MUST contain ids (ie. gene_id for 'gene' features, isoform_id for 'isoform' features, etc)
- `level`: One of c('genes','isoforms','TSS','CDS') to indicate which type of features you are being added, and to what data-level.
- `...`: Additional arguments.

**Details**

Examples

#None yet.

count-methods

Retrieve count values (raw and normalized)

Description
Returns a data.frame from @count slot

Details
Returns a data.frame of count values.

Value
A data.frame of count-level values for a set of features.

Methods
signature(object = "CuffData")
signature(object = "CuffFeature")
signature(object = "CuffFeatureSet")

Note
None

Author(s)
Loyal A. Goff

References
None

Examples
data(sampleData)
count(PINK1)
**countMatrix**

| countMatrix | countMatrix |

**Description**

Retrieve count values as gene by condition matrix

**Usage**

```r
## S4 method for signature 'CuffData'
countMatrix(object, fullnames = FALSE, sampleIdList)
## S4 method for signature 'CuffData'
repCountMatrix(object, fullnames = FALSE, repIdList)
```

**Arguments**

- `object` : An object of class (`'CuffData'`, `'CuffFeatureSet'`, `'CuffGeneSet'`, `'CuffGene'`, or `'CuffFeature'`)
- `fullnames` : A logical value whether or not to concatenate `gene_short_name` and `tracking_id` values (easier to read labels)
- `sampleIdList` : A vector of sample names to subset the resulting matrix.
- `repIdList` : A vector of replicate names to subset the resulting replicate matrix.

**Details**

None.

**Value**

A feature x condition matrix of count values.

**Note**

None

**Author(s)**

Loyal A. Goff

**References**

None.

**Examples**

```r
data(sampleData)
countMatrix(sampleGeneSet)
repCountMatrix(sampleGeneSet)
```
Description

Creates a ggplot2 plot object with a geom_box layer displaying summary statistics for FPKM values across samples (x).

Usage

```r
## S4 method for signature 'CuffData'
csBoxplot(object, logMode=TRUE, pseudocount=0.0001, replicates=FALSE,...)
```

Arguments

- `object`  
  An object of class CuffData.
- `logMode`  
  A logical argument to log10-transform FPKM values.
- `pseudocount`  
  Value added to FPKM to avoid log-transform issues.
- `replicates`  
  A logical value whether or not to plot individual replicates or aggregate condition values.
- `...`  
  Additional arguments to csBoxplot

Details

None

Value

A ggplot2 plot object with a geom_box layer.

Note

None

Author(s)

Loyal A. Goff

References

None

Examples

```r
a <- readCufflinks(system.file("extdata", package="cummeRbund")) # Read cufflinks data and create CuffSet object
genesis <- a@genes # CuffData object for all genes
csBoxplot(genes)
```
Description

Returns a ggplot2 plot object with geom_line layer plotting FPKM values over conditions faceted by k-means clustering clusters. (Euclidean). This is very crude at this point. This does not return any of the clustering information directly, but if you want it, you can retrieve it from the ggplot object returned.

Usage

```r
## S4 method for signature 'CuffFeatureSet'
csCluster(object,k,logMode=T,pseudocount=1,...)
```

Arguments

- **object**: An object of class CuffFeatureSet.
- **k**: Number of pre-defined clusters to attempt to find.
- **logMode**: A logical value whether or not to log-transform the FPKM values prior to clustering.
- **pseudocount**: Value added to FPKM to avoid log-transform issues.
- **...**: Additional arguments to pam.

Details

Uses `kmeans` function.

Author(s)

Loyal A. Goff

Source

None

References

None.

Examples

```r
data(sampleData)
csCluster(sampleGeneSet,4)
```
Description

Replaces the default plotting behavior of the old csCluster. Takes as an argument the output of csCluster and plots expression profiles of features facet by cluster.

Usage

csClusterPlot(clustering, pseudocount=1.0, drawSummary=TRUE, sumFun=mean_cl_boot)

Arguments

- **clustering**: The output of csCluster. (Must be the output of csCluster. Only this data format contains the necessary information for csClusterPlot.)
- **pseudocount**: Value added to FPKM to avoid log transformation issues.
- **drawSummary**: Logical value whether or not to draw a summary line for each cluster (by default this is the cluster mean)
- **sumFun**: Summary function used to by drawSummary (default: mean_cl_boot)

Details

This replaces the default plotting behavior of the old csCluster() method. This was necessary so as to preserve the cluster information obtained by csCluster in a stable format. The output of csClusterPlot is a ggplot2 object of expressionProfiles faceted by cluster ID.

Value

A ggplot2 object of expressionProfiles faceted by cluster ID.

Note

None.

Author(s)

Loyal A. Goff

None.

Examples

data(sampleData)
myClustering <- csCluster(sampleGeneSet, k = 4)
csClusterPlot(myClustering)
csDendro

Description

Creates a grid graphics plot of a dendrogram of Jensen-Shannon distances between conditions of a CuffFeatureSet or CuffGeneSet object.

Usage

## S4 method for signature 'CuffFeatureSet'
csDendro(object, logMode = T, pseudocount = 1, replicates = FALSE)
## S4 method for signature 'CuffData'
csDendro(object, logMode = T, pseudocount = 1, replicates = FALSE, ...)

Arguments

object An object of class 'CuffFeatureSet' or 'CuffGeneSet'
logMode A logical argument to log10-transform FPKM values prior to plotting.
pseudocount Value to be added to FPKM for appropriate log transformation and clustering. (Avoids zero-based errors)
replicates A logical value whether or not to plot individual replicates or aggregate condition values.
... Additional arguments to csHeatmap

Details

None

Value

Returns a dendrogram object and plots that object by default.

Note

None

Author(s)

Loyal A. Goff and Cole Trapnell

References

None.

Examples

data(sampleData)
csDendro(sampleGeneSet)
Description

Creates a smoothed density plot, by sample, for log10 FPKM values from a cuffdiff run.

Usage

```r
## S4 method for signature 'CuffData'
csDensity(object, logMode=TRUE, pseudocount=0, labels, features=FALSE, replicates=FALSE,...)
## S4 method for signature 'CuffFeatureSet'
csDensity(object, logMode=TRUE, pseudocount=0, labels, features=FALSE, replicates=FALSE,...)
```

Arguments

- `object`: An object of class CuffData.
- `logMode`: A logical value of whether or not to log10-transform FPKM values. By default this is TRUE.
- `pseudocount`: Pseudocount value added to FPKM to avoid errors in log-transformation of true zero values.
- `labels`: A list of tracking_id values or gene_short_name values used for ‘callout’ points on the density plot for reference. (Not implemented yet).
- `features`: Will include all fields from ‘features’ slot in returned ggplot object. Useful for further manipulations of plot object using feature-level attributes (e.g. gene_type, class_code, etc)
- `replicates`: A logical value whether or not to plot individual replicates or aggregate condition values.
- `...`: Additional arguments

Details

Creates a density plot, by sample, for log10-transformed FPKM values from a cuffdiff run.

Value

A ggplot2 plot object

Note

None

Author(s)

Loyal A. Goff

References

None
Examples

```r
a <- readCufflinks(system.file("extdata", package="cummeRbund"))  # Create CuffSet object from sample data
genes <- a@genes  # Create CuffData object for all 'genes'
d <- csDensity(genes)  # Create csDensity plot
d  # Render plot
```

## Description

Creates a ggplot plot object with a geom_tile layer of JS Distance values between samples or genes.

## Usage

```r
## S4 method for signature 'CuffFeatureSet'
csDistHeat(object, replicates=F, samples.not.genes=T,
            logMode=T, pseudocount=1.0,
            heatscale=c(low='lightyellow',mid='orange',high='darkred'),
            heatMidpoint=NULL, ...)
```

## Arguments

- `object`: An object of class 'CuffFeatureSet' or 'CuffGeneSet'
- `replicates`: A logical argument whether or not to use individual replicate FPKM values as opposed to condition FPKM estimates. (default: FALSE)
- `samples.not.genes`: Compute distances between samples rather than genes. If False, compute distances between genes.
- `logMode`: A logical argument to log10-transform FPKM values prior to plotting.
- `pseudocount`: Value to be added to FPKM for appropriate log transformation and clustering. (Avoids zero-based errors)
- `heatscale`: A list with min length=2, max length=3 that describe the the color scale.
- `heatMidpoint`: Value for midpoint of color scale.
- `...`: Additional arguments to csHeatmap

## Details

None

## Value

A ggplot2 plot object with a geom_tile layer to display distance between samples or genes.

## Note

None
csHeatmap

Author(s)
Loyal A. Goff, Cole Trapnell, and David Kelley

References
None

Examples
data(sampleData)
csDistHeat(sampleGeneSet)

csHeatmap | csHeatmap

Description
Creates a ggplot plot object with a geom_tile layer of FPKM values per feature and sample.

Usage
```r
## S4 method for signature 'CuffFeatureSet'
csHeatmap(object, rescaling='none', clustering='none', labCol=T, labRow=T, logMode=T, pseudocount=1.0, border=FALSE, heatscale=c(low='lightyellow', mid='orange', high='darkred'), heatMidpoint=NULL, fullnames=T, replicates=FALSE, method='none', ...)
```

Arguments
- **object**: An object of class 'CuffFeatureSet' or 'CuffGeneSet'
- **rescaling**: Rescaling can either be 'row' or 'column' OR you can pass rescale a function that operates on a matrix to do your own rescaling. Default is 'none'.
- **clustering**: Clustering can either be 'row', 'column', 'none', or 'both', in which case the appropriate indices are re-ordered based on the pairwise Jensen-Shannon distance of FPKM values.
- **labCol**: A logical argument to display column labels.
- **labRow**: A logical argument to display row labels.
- **logMode**: A logical argument to log10-transform FPKM values prior to plotting.
- **pseudocount**: Value to be added to FPKM for appropriate log transformation and clustering. (Avoids zero-based errors)
- **border**: A logical argument to draw border around plot.
- **heatscale**: A list with min length=2, max length=3 that detail the low,mid,and high colors to build the color scale.
- **heatMidpoint**: Value for midpoint of color scale.
- **fullnames**: A logical value whether to use 'fullnames' (concatenated gene_short_name and gene_id) for rows in heatmap. Default [ TRUE ].
- **replicates**: A logical value whether or not to plot individual replicates or aggregate condition values.
- **method**: Function to be used for clustering. Default is JS-distance. You can pass your own function to this argument as long as the output is an instance of the 'dist' class and is applied to the rows of the input matrix.
- **...**: Additional arguments to csHeatmap
**csScatter**

**Details**

None

**Value**

A ggplot2 plot object with a geom_tile layer to display FPKM values by sample (x) and feature (y)

**Note**

None

**Author(s)**

Loyal A. Goff and Cole Trapnell

**References**

None.

**Examples**

data(sampleData)
csHeatmap(sampleGeneSet)

csScatter

---

**Description**

A scatter plot comparing the FPKM values from two samples in a cuffdiff run.

**Usage**

```r
## S4 method for signature 'CuffData'
csScatter(object, x, y, logMode=TRUE, pseudocount=1.0, labels, smooth=FALSE, colorByStatus = FALSE, drawRug=TRUE, ...)
## S4 method for signature 'CuffData'
csScatterMatrix(object, replicates=FALSE, logMode=TRUE, pseudocount=1.0, hexbin=FALSE, useCounts=FALSE, ...)
```

**Arguments**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>object</td>
<td>An object of class ('CuffData','CuffFeatureSet')</td>
</tr>
<tr>
<td>x</td>
<td>Sample name for x axis</td>
</tr>
<tr>
<td>y</td>
<td>Sample name for y axis</td>
</tr>
<tr>
<td>logMode</td>
<td>Logical argument to log2-transform data (default: T )</td>
</tr>
<tr>
<td>replicates</td>
<td>Logical argument whether or not to draw individual replicate values instead of condition values. (default: T )</td>
</tr>
<tr>
<td>pseudocount</td>
<td>Value to add to zero FPKM values for log transformation (default: 0.0001)</td>
</tr>
<tr>
<td>smooth</td>
<td>Logical argument to add a smooth-fit regression line</td>
</tr>
</tbody>
</table>
### labels
A list of tracking_ids or gene_short_names that will be 'callout' points in the plot for reference. Useful for finding genes of interest in the field. Not implemented yet.

### colorByStatus
A logical argument whether or not to color the points by 'significant' Y or N. [Default = FALSE]

### drawRug
A logical argument whether or not to draw the rug for x and y axes [Default = TRUE]

### hexbin
Logical value whether or not to visualize overplotting with hexbin.

### useCounts
Uses normalized counts instead of FPKM.

Additional arguments to csScatter

#### Description
Returns a matrix of 'Specificity scores' (S) defined as 1-JSD(p_g,q_i) where p_g is the Log10+1 expression profile of a gene g across all conditions j, collapsed into a probability distribution, and q_i is the unit vector of 'perfect expression' in a given condition i.
csVolcano

Usage

```r
## S4 method for signature 'CuffFeatureSet'
csSpecificity(object, logMode = TRUE, pseudocount = 1, relative = FALSE, ...)
## S4 method for signature 'CuffData'
csSpecificity(object, logMode = TRUE, pseudocount = 1, relative = FALSE, ...)
```

Arguments

- `object`: An object of class CuffFeatureSet, CuffGeneSet, or CuffData.
- `logMode`: A logical argument to log10-transform FPKM values prior to plotting.
- `pseudocount`: Value to be added to FPKM for appropriate log transformation and clustering. (Avoids zero-based errors)
- `relative`: A logical argument that when TRUE, will scale the S values from 0-1 by dividing by max(S)
- `...`: Additional arguments to fpkmMatrix.

Details

None.

Author(s)

Loyal A. Goff

Source

None.

References

None.

Examples

```r
data(sampleData)
csSpecificity(sampleGeneSet)
```

---

**csVolcano**

Volcano Plot

Description

Creates a volcano plot of log fold change in expression vs -log(pval) for a pair of samples (x,y)

Usage

```r
## S4 method for signature 'CuffData'
csVolcano(object, x, y, alpha = 0.05, showSignificant = TRUE, features = FALSE, xlimits = c(-20, 20), ...)
## S4 method for signature 'CuffData'
csVolcanoMatrix(object, alpha = 0.05, xlimits = c(-20, 20), mapping = aes(), ...)
```
Arguments

- **object**: An object of class CuffData, CuffFeatureSet, or CuffGeneSet
- **x**: Sample name from 'samples' table for comparison
- **y**: Sample name from 'samples' table for comparison
- **alpha**: Provide an alpha cutoff for visualizing significant genes
- **showSignificant**: A logical value whether or not to distinguish between significant features or not (by color).
- **features**: Will include all fields from 'features' slot in returned ggplot object. Useful for further manipulations of plot object using feature-level attributes (e.g. gene_type, class_code, etc)
- **xlims**: Set boundaries for x limits to avoid infinity plotting errors. [Default c(-20,20)]
- **mapping**: Passthrough argument for ggplot aesthetics. Can be ignored completely.
- **...**: Additional arguments

Details

This creates a 'volcano' plot of fold change vs. significance for a pairwise comparison of genes or features across two different samples.

Value

A ggplot2 plot object

Note

None

Author(s)

Loyal A. Goff

References

None.

Examples

```r
a<-readCufflinks(system.file("extdata", package="cummeRbund")) #Create CuffSet object
genes<a@genes #Create cuffData object for all genes
v<-csVolcano(genes,"hESC","Fibroblasts") # Volcano plot of all genes for conditions x='hESC' and y='Fibroblast'
v #print plot
```
**Description**

A 'pointer' class for all information (FPKM, annotation, differential expression) for a given feature type (genes, isoforms, TSS, CDS). The methods for this function communicate directly with the SQL backend to present data to the user.

**Objects from the Class**

Objects can be created by calls of the form `new("CuffData", DB, tables, filters, type, idField, ...)`. 

**Slots**

- **DB**: Object of class "SQLiteConnection"
- **tables**: Object of class "list"
- **filters**: Object of class "list"
- **type**: Object of class "character"
- **idField**: Object of class "character"

**Methods**

- **dim** signature(x = "CuffData"): ...
- **getFeatures** signature(object = "CuffData"): ...
- **DB** signature(object = "CuffData"): Accessor for @DB slot
- **diffTable** signature(object = "CuffData"): Create a Full table (wide format) of differential expression information for all pairwise comparisons
- **makeRnk** signature(object = "CuffData"): Internal method to create .rnk file. Should not be called directly
- **annotation** signature(object = "CuffData"): Access annotation data

**Note**

None

**Author(s)**

Loyal A. Goff

**References**

None

**See Also**

None

**Examples**

`showClass("CuffData")`
Class "CuffDist"

Description
A 'pointer' class to information relative to the distribution-level tests (promoters, splicing, and relative CDS usage)

Objects from the Class
Objects can be created by calls of the form new("CuffDist", DB, table, type, idField, ...).

Slots
- DB: Object of class "SQLiteConnection"
- table: Object of class "character"
- type: Object of class "character"
- idField: Object of class "character"

Methods
- dim signature(x = "CuffDist"): ...
- samples signature(x = "CuffDist"): ...
- DB signature(object = "CuffDist"): Accessor for @DB slot

Note
None

Author(s)
Loyal A. Goff

References
None

See Also
None

Examples
showClass("CuffDist")
Description

A 'data' container class for all FPKM, annotation, and differential expression data for a single feature (gene, isoform, TSS, or CDS).

Objects from the Class

Objects can be created by calls of the form `new("CuffFeature", annotation, fpkm, diff, ...)`.

Slots

- `annotation`: Object of class "data.frame"
- `fpkm`: Object of class "data.frame"
- `diff`: Object of class "data.frame"
- `repFpkm`: Object of class "data.frame"
- `count`: Object of class "data.frame"
- `genome`: Object of class "character"

Methods

- `fpkmMatrix` signature(`object="CuffFeature"`): ...
- `length` signature(`x = "CuffFeature"`): ...

Accessors

- `annotation` signature(`object="CuffFeature"`): Access @annotation slot
- `diffData` signature(`object="CuffFeature"`): Access @diff slot
- `samples` signature(`object="CuffFeature"`): Get vector of samples

Note

'CuffGene' is a superclass of 'CuffFeature' that links gene information for a given gene with all isoform-, TSS-, and CDS-level data for the given gene.

CuffGene

Examples

`showClass("CuffFeature")`
Class "CuffFeatureSet"

Description

A 'data' container class for all FPKM, annotation, and differential expression data for a set of features (genes, isoforms, TSS, CDS).

Objects from the Class

Objects can be created by calls of the form `new("CuffFeatureSet", annotation, fpkm, diff, ...)`. 

Slots

- `annotation`: Object of class "data.frame" ~
- `fpkm`: Object of class "data.frame" ~
- `diff`: Object of class "data.frame" ~
- `repFpkm`: Object of class "data.frame" ~
- `count`: Object of class "data.frame" ~
- `genome`: Object of class "character" ~

Methods

- `diffData` signature(object = "CuffFeatureSet"): ...
- `featureNames` signature(object = "CuffFeatureSet"): ...
- `features` signature(object = "CuffFeatureSet"): ...
- `fpkmMatrix` signature(object = "CuffFeatureSet"): ...
- `repFpkmMatrix` signature(object = "CuffFeatureSet"): ...
- `countMatrix` signature(object = "CuffFeatureSet"): ...
- `samples` signature(object = "CuffFeatureSet"): ...
- `length` signature(object = "CuffFeatureSet"): ...

Accessors

- `annotation` signature(object="CuffFeatureSet"): Access @annotation slot

CuffFeature

Examples

showClass("CuffGene")

Description

A 'data' container class for all FPKM, annotation, and differential expression data (an associated features) for a given set of genes.

Objects from the Class

Objects can be created by calls of the form new("CuffGeneSet", annotation, fpkm, diff, ...).
Slots

ids: Object of class "character" ~~
isoforms: Object of class "CuffFeatureSet" ~~
TSS: Object of class "CuffFeatureSet" ~~
CDS: Object of class "CuffFeatureSet" ~~
promoters: Object of class "CuffFeatureSet" ~~
relCDS: Object of class "CuffFeatureSet" ~~
splicing: Object of class "CuffFeatureSet" ~~
annotation: Object of class "data.frame" ~~
fpkm: Object of class "data.frame" ~~
diff: Object of class "data.frame" ~~

Extends

Class "CuffFeatureSet", directly.

Methods

No methods defined with class "CuffGeneSet" in the signature.

Accessors

genes signature(object = "CuffGeneSet"): Access @genes slot
isoforms signature(object = "CuffGeneSet"): Access @isoforms slot
TSS signature(object = "CuffGeneSet"): Access @TSS slot
CDS signature(object = "CuffGeneSet"): Access @CDS slot
promoters signature(object = "CuffGeneSet"): Access @promoters slot
relCDS signature(object = "CuffGeneSet"): Access @relCDS slot
splicing signature(object = "CuffGeneSet"): Access @splicing slot

CuffFeatureSet

Examples

showClass("CuffGeneSet")
Description
A 'pointer' class to connect to, and retrieve data from the SQLite backend database.

Objects from the Class
Objects can be created by calls of the form new("CuffSet", DB, conditions, genes, isoforms, TSS, CDS, promoters, splicing, relCDS, ...).
Available methods are primary accessors to retrieve CuffGeneSet or CuffGene objects for manipulation.

Slots
DB: Object of class "SQLiteConnection" ~
conditions: Object of class "data.frame" ~
genes: Object of class "CuffData" ~
isoforms: Object of class "CuffData" ~
phenoData: Object of class "data.frame" ~
TSS: Object of class "CuffData" ~
CDS: Object of class "CuffData" ~
runInfo: Object of class "data.frame" ~
splicing: Object of class "CuffDist" ~
relCDS: Object of class "CuffDist" ~

Methods
[ signature(x = "CuffSet"): ... ]

Accessors
DB signature(object = "CuffSet"): Access @DB slot
genes signature(object = "CuffSet"): Access @genes slot
isoforms signature(object = "CuffSet"): Access @isoforms slot
TSS signature(object = "CuffSet"): Access @TSS slot
CDS signature(object = "CuffSet"): Access @CDS slot
promoters signature(object = "CuffSet"): Access @promoters slot
splicing signature(object = "CuffSet"): Access @splicing slot
relCDS signature(object = "CuffSet"): Access @relCDS slot

Note
None.

Examples

showClass("CuffSet")

diffData (Differential comparison data)

Description
An accessor method to retrieve differential expression data from a 'CuffData', 'CuffFeatureSet', or 'CuffFeature' object

Usage

## S4 method for signature 'CuffData'
diffData(object, x, y, features=FALSE)

Arguments

object An object of class ('CuffData' or 'CuffFeatureSet')
x Optional, if x and y are both missing, data for all pairwise differential comparisons are returned, otherwise if x and y are sample names from the 'samples' table, than only differential data pertaining to those two samples are returned.
y See 'x'
features A logical value that returns all feature-level data as part of data.frame when true. object must be of class 'CuffData'.
...
Additional arguments.

Details
None

Value
A data.frame object

Note
None
Dimensionality Reduction

Author(s)

Loyal A. Goff

References

Examples

data(sampleData)
diff<-diffData(sampleGeneSet) #returns a dataframe of differential expression data from sample CuffGeneSet object.

---

Dimensionality Reduction

Dimensionality reduction utilities

Description

Dimensionality reduction plots for feature selection and extraction for cummeRbund

Usage

```r
## S4 method for signature 'CuffData'
MDSplot(object,replicates=FALSE,logMode=TRUE,pseudocount=1.0)
## S4 method for signature 'CuffData'
PCAplot(object,x="PC1",y="PC2",replicates=FALSE,pseudocount=1.0,scale=TRUE,...)
```

Arguments

- `object`: The output of class CuffData from which to draw expression estimates. (e.g. genes(cuff))
- `x`: For PCAplot, indicates which principal component is to be presented on the x-axis (e.g. "PC1","PC2","PC3", etc)
- `y`: See `x`.
- `pseudocount`: Value added to FPKM to avoid log transformation issues.
- `logMode`: Logical value whether or not to use log-transformed expression estimates (default: TRUE)
- `replicates`: A logical value to indicate whether or not individual replicate expression estimates will be used.
- `scale`: For PCAplot, a logical value passed directly to prcomp.
- `...`: Additional passthrough arguments (may not be fully implemented yet).

Details

These methods attempt to project a matrix of expression estimates across conditions and/or replicates onto a smaller number of dimensions for feature selection, feature extraction, and can also be useful for outlier detection.
dispersionPlot

Value
A ggplot2 object.

Note
None.

Author(s)
Loyal A. Goff

References
None.

Examples
cuff <- readCufflinks(system.file("extdata", package="cummeRbund")) # Create CuffSet object from sample data
p <- PCAplot(genes(cuff), x="PC2", y="PC3", replicates=TRUE)
m <- MDSplot(genes(cuff), replicates=TRUE)
p # Render PCA plot
m # Render MDS plot

dispersionPlot | Mean count vs dispersion plot

Description
A scatter plot comparing the mean counts against the estimated dispersion for a given level of features from a cuffdiff run.

Usage
### S4 method for signature `CuffData`
dispersionPlot(object)

Arguments

  object | An object of class (`CuffData`) |

Details
None

Value
ggplot object with geom_point layer

Note
None
distValues

Author(s)
Loyal A. Goff

References
None

Examples
a <- readCufflinks(system.file("extdata", package="cummeRbund")) # Create CuffSet object from sample data
genes <- genes(a) # Create CuffData object for all genes
d <- dispersionPlot(genes) # Create plot object
d # render plot object

Description
Returns a data.frame of distribution-level test values from a CuffDist object (@promoters, @splicing, @relCDS)

Usage
## S4 method for signature 'CuffDist'
distValues(object)

Arguments

object
An object of class 'CuffDist'

...
Additional arguments to distValues

Details
None

Value
Returns a data.frame of distribution-level test values.

Note
None

Author(s)
Loyal A. Goff

References
None
expressionBarplot

See Also
None

Examples
a <- readCufflinks(system.file("extdata", package="cummeRbund")) # Read cufflinks data and create CuffSet object
distValues(a@promoters) # returns data.frame of values from CuffDist object in slot 'promoters'

expressionBarplot Barplot

Description
A barplot of FPKM values with confidence intervals for a given gene, set of genes, or features of a
gene (e.g. isoforms, TSS, CDS, etc).

Usage
## S4 method for signature 'CuffFeatureSet'
expressionBarplot(object, logMode = TRUE, pseudocount = 1.0, showErrorbars = TRUE, showStatus = TRUE, replicates = FALSE, ...)

Arguments
object An object of class ('CuffFeatureSet', 'CuffGeneSet', 'CuffFeature', 'CuffGene')
logMode A logical value whether or not to draw y-axis on log10 scale. Default = FALSE.
pseudocount Numerical value added to each FPKM during log-transformation to avoid errors.
showErrorbars A logical value whether or not to draw error bars. Default = TRUE
showStatus A logical value whether or not to draw visual queues for quantification status of
a given gene:condition. Default = TRUE
replicates A logical value whether or not to plot individual replicates or aggregate condi-
tion values.
... Additional arguments.

Details
None

Value
A ggplot2 plot object

Note
Need to implement logMode and features for this plotting method.

Author(s)
Loyal A. Goff
expressionPlot

References
None

Examples

data(sampleData)
PINK1 # sample CuffFeature object
eexpressionBarplot(PINK1) # Barplot of PINK1 FPKM values
expressionBarplot(PINK1@isoforms) # Barplot of PINK1 FPKM values faceted by isoforms

expressionPlot

Expression Plot

Description
A line plot (optionally with confidence intervals) detailing FPKM expression levels across conditions for a given gene(s) or feature(s)

Usage

```r
## S4 method for signature 'CuffFeature'
expressionPlot(object, logMode=FALSE, pseudocount=1.0, drawSummary=FALSE, sumFun=mean_cl_boot, showErrorbars=TRUE, showStatus=TRUE, replicates=FALSE, ...)
```

Arguments

- **object**: An object of class ('CuffFeature' or 'CuffGene')
- **logMode**: A logical value to draw y-axis (FPKM) on log-10 scale. Default = FALSE.
- **pseudocount**: A numeric value added to FPKM to avoid errors on log-10 transformation.
- **drawSummary**: A logical value. Draws a 'summary' line with mean FPKM values for each condition.
- **sumFun**: Function used to determine values for summary line. Default = mean_cl_boot
- **showErrorbars**: A logical value whether or not to draw error bars.
- **showStatus**: A logical value whether or not to draw visual queues for quantification status of a given gene:condition. Default = TRUE
- **replicates**: A logical value whether or not to plot individual replicates or aggregate condition values.
- **...**: Additional arguments

Details
None

Value
A ggplot2 plot object

Note
None
featureNames

expressionPlot(PINK1@isoforms) # Line plot of PINK1 FPKM values faceted by isoforms

---

Description

Retrieve a vector of feature names from a ‘CuffData’ or ‘CuffFeatureSet’ object

Usage

## S4 method for signature 'CuffData'
featureNames(object)

Arguments

object An object of class (‘CuffData’ or ‘CuffFeatureSet’)'

Details

None

Value

A list of feature names

Note

None

Author(s)

Loyal A. Goff

References

None

Examples

data(sampleData)
featureNames(sampleGeneSet)
Description

Returns a data frame of features from a CuffGene object

Usage

```r
## S4 method for signature 'CuffGene'
features(object)
```

Arguments

- `object` An object of class ('CuffGene')

Details

None

Value

A data.frame of feature-level information

Note

None

Author(s)

Loyal A. Goff

References

None

Examples

```r
data(sampleData)
features(PINK1)
```
findGene

Description
A helper function to retrieve the gene_ids given a 'lookup' value (e.g. gene_short_name, iso-form_id, etc). Utility to search for gene_id and gene_short_name given a single 'query' string (e.g. query='pink1' will return all genes with 'pink1' (case-insensitive) in the gene_short_name field.

Usage
## S4 method for signature 'CuffSet'
findGene(object, query)

Arguments
  object  An object of class 'CuffSet' (Primary 'pointer' object for Cufflinks data).
  query   A character string for which you would like to retrieve corresponding gene_id values.

Details
None.

Value
Returns a data.frame of gene_id and gene_short_name values corresponding to genes from which 'query' matches

Note
Right now, this does not return an error if it cannot find a gene. (this is probably a bad thing...)

Author(s)
Loyal A. Goff

References
None.

Examples
cuff<-readCufflinks(system.file("extdata", package="cummeRbund")) # Read cufflinks data and create master CuffSet object
myQuery<-'pink1'
findGene(cuff,myQuery) # Retrieve gene_id values for any genes matching 'pink1'
Description

Returns a CuffGeneSet containing n genes with the most similar expression profiles to gene/profile x.

Usage

```r
## S4 method for signature 'CuffSet'
findSimilar(object, x, n, distThresh, returnGeneSet = TRUE, ...)
```

Arguments

- `object` A object of class 'CuffSet'
- `x` A 'gene_id' or 'gene_short_name' from which to look up an expression profile OR a vector of expression values to compare all genes (vector must have same length and order of 'samples')
- `n` Number of similar genes to return
- `distThresh` A thresholding value on which to filter results based on JS-distance (e.g. A distThresh of 1.0 will return all genes, 0.0 will return those genes with 'perfect identity' to the gene of interest.)
- `returnGeneSet` A logical value whether to return a CuffGeneSet object [default] or a distance-ranked data frame of similar genes. The latter is useful if you want to explore the returned list based on distances.
- `...` Additional arguments to fpkmMatrix call within findSimilar (e.g. fullnames=T)

Details

By default, returns a CuffGeneSet object with n similar genes. This may change in the future.

Value

A CuffGeneSet object of n most similar genes to x.

Note

None

Author(s)

Loyal A. Goff

References

None

Examples

```r
a <- readCufflinks(system.file("extdata", package = "cummeRbund"))
mySimilarGenes <- findSimilar(a, "PINK1", 10)
```
fpkm-methods

---

**fpkm-methods**

*Retrieve FPKM values*

---

**Description**

Returns a data.frame from @FPKM slot

**Details**

Returns a data.frame of FPKM values.

**Value**

A data.frame of FPKM-level values for a set of features.

**Methods**

`signature(object = "CuffData")`

`signature(object = "CuffFeature")`

`signature(object = "CuffFeatureSet")`

**Note**

None

**Author(s)**

Loyal A. Goff

**References**

None

**Examples**

```r
data(sampleData)
fpkm(PINK1)
```

---

**fpkmMatrix**

*fpkmMatrix*

---

**Description**

Retrieve FPKM values as gene by condition (fpkmMatrix) or gene by replicate (repFpkmMatrix) matrix
getFeatures

Usage

```r
## S4 method for signature 'CuffData'
fpkmMatrix(object, fullnames = FALSE, sampleIdList)
## S4 method for signature 'CuffData'
repFpkmMatrix(object, fullnames = FALSE, repIdList)
```

Arguments

- `object`: An object of class (`'CuffData'`, `'CuffFeatureSet'`, `'CuffGeneSet'`, `'CuffGene'`, or `'CuffFeature'`)
- `fullnames`: A logical value whether or not to concatenate gene_short_name and tracking_id values (easier to read labels)
- `sampleIdList`: A vector of sample names to subset the resulting matrix.
- `repIdList`: A vector of sample names to subset the resulting matrix.

Details

None.

Value

A feature x condition matrix of FPKM values.

Note

None

Author(s)

Loyal A. Goff

References

None

Examples

data(sampleData)
fpkmMatrix(sampleGeneSet)
repFpkmMatrix(sampleGeneSet)

Description

Primary accessor from a CuffSet object to retrieve all related information for >1 (MANY) given FEATURES, indexed by tracking id.
getGene

Usage

### S4 method for signature 'CuffSet'

getFeatures(object, featureIdList, sampleIdList=NULL, level='isoforms')

Arguments

- **object**: An object of class 'CuffSet' (Primary 'pointer' object for Cufflinks data).
- **featureIdList**: A vector of 'isoform_id', 'TSS_group_id', or 'CDS_id' to identify which features for which you would like to retrieve all information.
- **sampleIdList**: A vector of sample names used to subset or re-order samples in returned object
- **level**: Feature level to be queried for significance (must be one of c('isoforms', 'TSS', 'CDS')

Details

None.

Value

Returns a CuffFeatureSet object containing all related information for a given set of tracking_id values

Note

Right now, this does not return an error if it cannot find a gene. (this is probably a bad thing...)

Author(s)

Loyal A. Goff

References

None.

Examples

```r
cuff<-readCufflinks(system.file("extdata", package="cummeRbund")) #Read cufflinks data and create master CuffSet object
sample.isoform.ids<-sample(featureNames(isoforms(cuff)),10)
myGene<-getFeatures(cuff,sample.isoform.ids) # Retrieve all information for a set of 10 sampled features.
```

---

getGene

Description

Primary accessor from a CuffSet object to retrieve all related information for 1 (one) given gene, indexed by gene_id or gene_short_name.

Usage

### S4 method for signature 'CuffSet'

geneId, sampleIdList=NULL)
getGeneId

Arguments

object An object of class 'CuffSet' (Primary 'pointer' object for Cufflinks data).
geneId A character string to identify which gene for which you would like to retrieve all information.
sampleIdList A vector of sample names used to subset or re-order samples in returned object

Details

None.

Value

Returns a CuffGene object containing all related information for a given gene_id or gene_short_name.

Note

Right now, this does not return an error if it cannot find a gene. (this is probably a bad thing...)

Author(s)

Loyal A. Goff

References

None.

Examples

a <- readCufflinks(system.file("extdata", package="cummeRbund")) # Read cufflinks data and create master CuffSet object
myGene <- getGene(a, "PINK1") # Retrieve all information for gene "PINK1"

Description

A helper function to retrieve the gene_ids for a given list of feature ids (e.g. isoform_ids, tss_group_ids, or CDS_ids). This should not be called directly by the user.

Usage

## S4 method for signature 'CuffSet'
getGeneId(object, idList)

Arguments

object An object of class 'CuffSet' (Primary 'pointer' object for Cufflinks data).
idList A character string to identify the identifiers for which you would like to retrieve corresponding gene_id values.
getGenes

Details
None.

Value
Returns a vector of gene_id values corresponding to genes from which idList are sub-features.

Note
Right now, this does not return an error if it cannot find a gene. (this is probably a bad thing...)

Author(s)
Loyal A. Goff

References
None.

Examples
cuff<-readCufflinks(system.file("extdata", package="cummeRbund"))  # Read cufflinks data and create master CuffSet object
sampleFeatureIds<-sample(featureNames(isoforms(cuff)),10)
correspondingGeneIds<-getGeneId(cuff,sampleFeatureIds)  # Retrieve gene_id values for parent genes of sampleFeatureIds.

genes <- getGenes(cuff, sampleFeatureIds)

description
Primary accessor from a CuffSet object to retrieve all related information for >1 (MANY) given genes, indexed by gene_id or gene_short_name.

Usage
## S4 method for signature 'CuffSet'
getGenes(object, geneIdList, sampleIdList=NULL)

Arguments
- object: An object of class `CuffSet` (Primary `pointer` object for Cufflinks data).
- geneIdList: A vector of gene_ids or gene_short_name to identify which genes for which you would like to retrieve all information.
- sampleIdList: A vector of sample names used to subset or re-order samples in returned object.

Details
None.
getLevels

Value

Returns a CuffGeneSet object containing all related information for a given set of gene_id or gene_short_name values.

Note

Right now, this does not return an error if it cannot find a gene. (this is probably a bad thing...)

Author(s)

Loyal A. Goff

References

None.

Examples

```r
a <- readCufflinks(system.file("extdata", package="cummeRbund")) # Read cufflinks data and create master CuffSet object.
data(sampleData)
sampleIDs
myGene <- getGenes(a, sampleIDs) # Retrieve all information for a set of 20 'sample' genes.
```

getLevels

Description

Returns a list of samples as levels. This should not be called directly by user.

Usage

```r
## S4 method for signature 'CuffData'
gergetLevels(object)
```

Arguments

- `object`: An object of class `CuffData` or `CuffFeatureSet` or `CuffFeature`.

Details

For internal usage only.

Value

A vector of sample names as factors.

Note

None.
Description

Returns a list of replicate samples as levels. This should not be called directly by user.

Usage

```r
## S4 method for signature 'CuffData'
getRepLevels(object)
```

Arguments

- `object`: An object of class `CuffSet` or `CuffData`

Details

For internal usage only.

Value

A vector of replicate names as factors.

Note

None.

Author(s)

Loyal A. Goff

References

None.
getSig

Description

Returns the identifiers of significant genes in a vector format.

Usage

```r
## S4 method for signature ‘CuffSet’
getSig(object, x, y, alpha = 0.05, level = ‘genes’)```

Arguments

- `object`: A CuffSet object (e.g. cuff)
- `x`: Optional argument to restrict significance results to one pairwise comparison. Must be used with a `y` argument to specify the other half of the pair.
- `y`: See `x`.
- `alpha`: An alpha value by which to filter multiple-testing corrected q-values to determine significance
- `level`: Feature level to be queried for significance (must be one of `c(‘genes’, ‘isoforms’, ‘TSS’, ‘CDS’)```

Details

This is a convenience function to quickly retrieve vectors of identifiers for genes or features that were determined to be significantly regulated between conditions by cuffdiff. This function only returns tracking IDs that correspond to tests with an `OK` status from cuffdiff, NOTEST values are ignored. By default `getSig` returns a vector of IDs for all pairwise comparisons together. If you specify an `x` AND `y` values as sample names, then only the features that are significant in that particular pairwise comparison are reported, after appropriate multiple testing correction of output p-values.

Value

A vector of feature IDs.

Note

None.

Author(s)

Loyal A. Goff

References

None.
getSigTable

Examples

```r
a <- readCufflinks(system.file("extdata", package="cummeRbund")) # Read cufflinks data in sample directory and create a CuffSet object
mySig <- getSig(a, x = "hiESC", y = "Fibroblasts", alpha = 0.05, level = "genes")
head(mySig)
```

### Description

Returns the identifiers of significant genes in a test table - like format.

### Usage

```r
## S4 method for signature 'CuffSet'
getSigTable(object, alpha = 0.05, level = "genes")
```

### Arguments

- **object**: A CuffSet object (e.g. cuff)
- **alpha**: An alpha value by which to filter multiple-testing corrected q-values to determine significance
- **level**: Feature level to be queried for significance (must be one of c("genes", "isoforms", "TSS", "CDS")

### Details

This is a convenience function to quickly retrieve lists of identifiers for genes or features that were determined to be significantly regulated between conditions by cuffdiff. This function only returns tracking IDs that correspond to tests with an "OK" status from cuffdiff. NOTEST values are ignored or reported as NA. By default getSig returns a table of genes x conditions, where the column names represent the pairwise comparisons from the cuffdiff analysis. The values in the table are 1 for features that are significant for this comparison and 0 for genes that are not, any failed tests are reported as <NA>. Only includes the features that are significant in at least one comparison.

### Value

A data.frame of pairwise test results.

### Note

None.

### Author(s)

Loyal A. Goff

### References

None.
Examples

```r
a <- readCufflinks(system.file("extdata", package="cummeRbund")) # Read cufflinks data in sample directory and create a
mySigTable <- getSigTable(a, alpha = 0.05, level = "genes")
head(mySigTable)
```

---

**JSdist**

**Jensen-Shannon distance on columns**

**Description**

JSdist takes a matrix of expression probabilities (calculated directly or output from makeprobs()) and returns a dist object of the pairwise Jensen-Shannon distances between columns.

**Usage**

```r
JSdist(mat)
```

**Arguments**

- `mat`: A matrix of expression probabilities (e.g. from makeprobs())

**Details**

Returns pairwise Jensen-Shannon distance (in the form of a dist object) for a matrix of probabilities (by column).

**Value**

A dist object of pairwise J-S distances between columns.

**Note**

None

**Author(s)**

Loyal A. Goff

**References**

None

**Examples**

```r
mat <- matrix(sample(1:50, 50), 10)
probs <- makeprobs(mat)
js.distance <- JSdist(probs)
```
**JSdistFromP**

**Jensen-Shannon distance on rows from a pre-defined vector of probabilities**

---

**Description**

JSdist takes a matrix of expression probabilities (calculated directly or output from makeprobs()) and returns a matrix of Jensen-Shannon distances between individual rows and a specific vector of probabilities (q)

**Usage**

```r
JSdistFromP(mat, q)
```

**Arguments**

- **mat**: A matrix of expression probabilities (e.g. from makeprobs())
- **q**: A vector of expression probabilities.

**Details**

Returns Jensen-Shannon distance for each row of a matrix of probabilities against a provided probability distribution (q)

**Value**

A vector of JS distances

**Note**

None

**Author(s)**

Loyal A. Goff

**References**

None

**Examples**

```r
mat <- matrix(sample(1:50, 50), 10)
q <- c(100, 4, 72, 8, 19)
q <- q/sum(q)
js.distance <- JSdistFromP(mat, q)
```
Description

Returns the Jensen-Shannon Distance (square root of JS divergence) between two probability vectors.

Usage

JSdistVec(p, q)

Arguments

- p: A vector of probabilities
- q: A vector of probabilities

Details

Should not be called directly by user.

Value

Returns the JS distance as a numeric

Note

None

Author(s)

Loyal A. Goff

References

None

Examples

p<-sample(1:5000,20)  # Generate a sample vector
q<-sample(1:5000,20)  # Generate another sample vector
p<-makeprobsvec(p)    # Convert to probability vector
q<-makeprobsvec(q)    # Convert to probability vector
JSdistVec(p,q)        # Calculate JS distance
Transformation of a matrix into probabilities by columns

Description

This function takes a matrix of expression values (must be greater than 0) and returns a matrix of probabilities by column. This is a required transformation for the Jensen-Shannon distance which is a metric that operates on probabilities.

Usage

makeprobs(a)

Arguments

a A matrix of expression values (values must be greater than 0).

Details

To make a matrix of probabilities by row, use t() to transpose prior to calling makeprobs.

Value

A matrix of expression probabilities by column.

Note

None

Author(s)

Loyal A. Goff

References

None

Examples

myMat<-matrix(sample(1:50,50),10)
probs<-makeprobs(myMat)
Description

Sums a vector of numerics and divides by the sum

Usage

makeprobsvec(p)

Arguments

p A vector of numerics

Details

None

Value

A vector of probabilities

Note

Should not be called directly by user.

Author(s)

Loyal A. Goff

References

None

Examples

p<-sample(1:5000,20)
makeprobsvec(p)
Description

Creates an M vs A plot (Avg intensity vs log ratio) for a given pair of conditions across all fpkms.

Usage

```r
## S4 method for signature 'CuffData'
MAplot(object, x, y, logMode = T, pseudocount = 1, smooth = FALSE, useCount = FALSE)
```

Arguments

- **object**: An object of class 'CuffData'.
- **x**: Sample name from 'samples' table for comparison.
- **y**: Sample name from 'samples' table for comparison.
- **logMode**: A logical argument to log10-transform FPKM values prior to plotting.
- **pseudocount**: Value to be added to FPKM for appropriate log transformation and clustering. (Avoids zero-based errors)
- **smooth**: Logical argument whether or not to draw a smoothed line fit through data.
- **useCount**: Logical argument whether or not to use mean counts instead of FPKM values.

Details

None

Value

Returns a ggplot MvsA plot object.

Note

None

Author(s)

Loyal A. Goff and Cole Trapnell

References

None.

Examples

```r
a <- readCufflinks(system.file("extdata", package = "cummeRbund")) # Create CuffSet object from sample data
genes <- a@genes # Create CuffData object for all 'genes'
d <- MAplot(genes, 'hESC', 'Fibroblasts') # Create csDensity plot
d # Render plot
```
**PINK1**

**Description**

A sample 'CuffGene' dataset

**Usage**

data(sampleData)

**Format**

PINK1 is a CuffGene object (extends CuffFeature) with all sample gene-, isoform-, TSS-, and CDS-level data for the gene 'PINK1'.

**Details**

Sample CuffGene data for gene ‘PINK1’

**Source**

None

**References**

None

**Examples**

data(sampleData)
PINK1

---

**QCplots**

**Quality Control visualizations**

**Description**

A collection of ggplot2 visualizations for quality control assessment of cuffdiff output.

- fpkmSCVPlot: A measure of cross-replicate variability, the squared coefficient of variation is a normalized measure of variance between empirical repicate FPKM values per condition, across the range of FPKM estimates.

**Usage**

```r
## S4 method for signature 'CuffData'
fpkmSCVPlot(object,FPKMLowerBound=1)
```
**Arguments**

- **object**: An object of class CuffData.
- **FPKMLowerBound**: A lower limit cutoff for FPKM values from which a fit of squared Coefficient of variation (default: 1)

**Details**

None

**Value**

A ggplot2 plot object with a geom_box layer.

**Note**

None

**Author(s)**

Loyal A. Goff

**References**

None

**Examples**

```r
a <- readCufflinks(system.file("extdata", package="cummeRbund"))  # Read cufflinks data and create CuffSet object
genes <- a@genes  # CuffData object for all genes
csBoxplot(genes)
```

---

**Description**

This initializes the backend SQLite table and provides a DB connection for all downstream data analysis.

**Usage**

```r
readCufflinks(dir = getwd(), dbFile = "cuffData.db", gtfFile = NULL,
runInfoFile = "run.info", repTableFile = "read_groups.info",
isoformFPKM = "isoforms.fpkm_tracking", isoformDiff = "isoform_exp.diff", isoformCount = "isoforms.count_tracking",
TSSFPKM = "tss_groups.fpkm_tracking", TSSDiff = "tss_group_exp.diff", TSSCount = "tss_groups.count_tracking",
CDSFPKM = "cds.fpkm_tracking", CDSExpDiff = "cds_exp.diff", CDSCount = "cds.count_tracking", CDSRep = 
CDSDiff = "cds.diff",
promoterFile = "promoters.diff",
splicingFile = "splicing.diff",
driver = "SQLite",
```

---
genome = NULL,
rebuild = FALSE, verbose = FALSE, ...)

Arguments

dir Directory in which all CuffDiff output files can be located. Defaults to current
working directory.
dbFile Name of backend database. Default is ‘cuffData.db’
gtfFile Path to .gtf file used in cuffdiff analysis. This file will be parsed to retrieve
transcript model information.
runInfoFile run.info file
repTableFile read_groups.info file
geneFPKM genes.fpkm_tracking file
geneDiff gene_exp.diff file
geneCount genes.count_tracking file
geneRep genes.read_group_tracking file
isoformFPKM isoforms.fpkm_tracking file
isoformDiff isoform_exp.diff file
isoformCount isoforms.count_tracking file
isoformRep isoform.read_group_tracking file
TSSFPKM tss_groups.fpkm_tracking file
TSSDiff tss_group_exp.diff file
TSSCount tss_groups.count_tracking file
TSSRep tss_groups.read_group_tracking file
CDSFPKM cds.fpkm_tracking file
CDSExpDiff cds.exp.diff file
CDSCount cds.count_tracking file
CDSRep cds.read_group_tracking file
CDSdiff cds.diff file (distribution tests on CDS)
promoterFile promoters.diff file (distribution tests on promoters)
splicingFile splicing.diff (distribution tests on isoforms)
driver Driver for backend database. (Currently only “SQLite” is supported).
genome A character string indicating to which genome build the .gtf annotations belong
(e.g. ‘hg19’ or ‘mm9’)
rebuild A logical argument to rebuild database backend.
verbose A logical argument for super verbose reporting (As if it wasn’t enough already!)
...
Additional arguments to readCufflinks

Details

This is the initialization function for the cummeRbund package. It creates the SQLite backend
database, populates the data, and provides a connection object for all future interactions with the
dataset. Once the initial build is complete, this function will default to using the database for all
future sessions. IMPORTANT: - Each R session should begin with a call to readCufflinks to re-open
the connection to the database. - Should any connectivity issues to the database arise, another call
to readCufflinks should create a new connection object and repair any issue. - The database can
always be rebuild (using rebuild=TRUE) from the original CuffDiff output files.
Value

A CuffSet object. A ‘pointer’ class that allows interaction with cufflinks/cuffdiff data via a SQLite database backend.

Note

None.

Author(s)

Loyal A. Goff

References

None.

Examples

```
a <- readCufflinks(system.file("extdata", package="cummeRbund"))  # Read cufflinks data in sample directory and create a CuffSet object
```

### repFpkm-methods

**Retrieve FPKM values**

**Description**

Returns a data.frame from @repFpkm slot

**Details**

Returns a data.frame of replicate FPKM values and associated statistics.

**Value**

A data.frame of replicate-level FPKM values and associated statistics for a set of features.

**Methods**

signature(object = "CuffData")
signature(object = "CuffFeature")
signature(object = "CuffFeatureSet")

**Note**

None

**Author(s)**

Loyal A. Goff
replicates

References
None

Examples
data(sampleData)
repFpkm(PINK1)

replicates Get replicate sample list from CuffData object

Description
Returns a list of replicate names from a CuffData or CuffFeatureSet object

Usage

```r
## S4 method for signature 'CuffData'
replicates(object)
```

Arguments

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>object</td>
<td>An object of class (<code>CuffSet</code>,<code>CuffData</code>)</td>
</tr>
</tbody>
</table>

Details
None

Value
A list of replicate sample names

Note

Author(s)
Loyal A. Goff

References
None

See Also
None

Examples

```r
a <- readCufflinks(system.file("extdata", package="cummeRbund")) # Create CuffSet object
replicates(a@genes)
```
runInfo

Retrieve run parameters and information from a CuffSet object

Description

Returns a data.frame of cuffdiff run parameters and information

Usage

```r
## S4 method for signature 'CuffSet'
runInfo(object)
```

Arguments

- `object`: An object of class ('CuffSet')

Details

None

Value

A data.frame of run parameters

Note

None

Examples

```r
a <- readCufflinks(system.file("extdata", package="cummeRbund"))  # Create CuffSet object
runInfo(a)
```
sampleGeneSet

Description
A sample CuffGeneSet data set for 20 genes.

Usage
data(sampleData)

Format
sampleGeneSet is a CuffGeneSet (extends CuffFeatureSet) object containing all sample gene-,
isoform-, TSS-, and CDS-level data for 20 different genes. These data were derived from a toy
set of hESC-vs-iPSC-vs-Fibroblast RNA-Seq expression data.

Details
None

Source
None

References
None

Examples
data(sampleData)

sampleIDs

Description
A vector of gene_ids used to create 'sampleGeneSet' example

Usage
data(sampleData)

Format
The format is: chr "sampleIDs"
samples

Details

None

Examples
data(sampleData)

| samples | Get sample list from CuffData object |

Description

Returns a list of sample names from a CuffData or CuffFeatureSet object

Usage

```r
## S4 method for signature 'CuffData'
samples(object)
```

Arguments

- `object` An object of class (`CuffData`, `CuffFeatureSet`, `CuffFeature`)

Details
None

Value

A list of sample names

Note
None

Author(s)
Loyal A. Goff

References

Examples

a <- readCufflinks(system.file("extdata", package="cummeRbund")) # Create CuffSet object
samples(a@genes)

shannon.entropy(p)

Arguments

p A vector of probabilities (must sum to ~1)

Details
None

Value

Returns a numeric value for the Shannon entropy of the supplied probability distribution

Note
None

Author(s)
Loyal A. Goff

References
None

Examples

x <- sample(1:500, 50)
p <- x/sum(x)
shannon.entropy(p)
Description

Returns a ggplot2 plot object representing a matrix of significant features. This is a useful synopsis of all significant pairwise comparisons within the dataset.

Usage

```r
## S4 method for signature 'CuffSet'
sigMatrix(object, alpha=0.05, level='genes', orderByDist=FALSE)
```

Arguments

- `object`: An object of class CuffSet.
- `alpha`: An alpha value by which to filter multiple-testing corrected q-values to determine significance.
- `level`: Feature level to be queried for significance (must be one of `c('genes', 'isoforms', 'TSS', 'CDS')`).
- `orderByDist`: Logical. If TRUE then samples are re-ordered based on JS-distance from one another (fairly useless unless you have a specific need for this).

Details

Creates a matrix plot to illustrate the number of significant features of type `level` at a given alpha from a cuffdiff run.

Value

A ggplot2 plot object
