Package ‘metagenomeSeq’

August 5, 2022

Title Statistical analysis for sparse high-throughput sequencing
Version 1.39.0
Date 2019-07-12
Author Joseph Nathaniel Paulson, Nathan D. Olson, Domenick J. Braccia, Justin Wagner, Hisham Talukder, Mihai Pop, Hector Corrada Bravo
Maintainer Joseph N. Paulson <jpaulson@jimmy.harvard.edu>
Description metagenomeSeq is designed to determine features (be it Operational Taxonomic Unit (OTU), species, etc.) that are differentially abundant between two or more groups of multiple samples. metagenomeSeq is designed to address the effects of both normalization and under-sampling of microbial communities on disease association detection and the testing of feature correlations.

**metagenomeSeq-package**  
*Statistical analysis for sparse high-throughput sequencing*

---

**Description**

metagenomeSeq is designed to determine features (be it Operational Taxonomic Unit (OTU), species, etc.) that are differentially abundant between two or more groups of multiple samples. metagenomeSeq is designed to address the effects of both normalization and under-sampling of microbial communities on disease association detection and the testing of feature correlations.

A user's guide is available, and can be opened by typing `vignette("metagenomeSeq")`

The metagenomeSeq package implements novel normalization and statistical methodology in the following papers.

**Author(s)**

Paulson, JN <jpaulson@umiacs.umd.edu>; Pop, M; Corrada Bravo, H

**References**

---

**aggregateBySample**  
*Aggregates a MRexperiment object or counts matrix to be a factor.*

---

**Description**

Using the phenoData information in the MRexperiment, calling aggregateBySample on a MRexperiment and a particular phenoData column (i.e. 'diet') will aggregate counts using the aggfun function (default rowMeans). Possible aggfun alternatives include rowMeans and rowMedians.

**Usage**

```r
aggregateBySample(obj, fct, aggfun = rowMeans, out = "MRexperiment")
aggSamp(obj, fct, aggfun = rowMeans, out = "MRexperiment")
```

**Arguments**

- `obj`: A MRexperiment object or count matrix.
- `fct`: phenoData column name from the MRexperiment object or a vector of labels.
- `aggfun`: Aggregation function.
- `out`: Either 'MRexperiment' or 'matrix'
aggregateByTaxonomy

Value
An aggregated count matrix or MRexperiment object where the new pData is a vector of 'fct' levels.

Examples

data(mouseData)
aggregateBySample(mouseData[1:100,],fct="diet",aggfun=rowSums)
# not run
# aggregateBySample(mouseData,fct="diet",aggfun=matrixStats::rowMedians)
# aggSamp(mouseData,fct='diet',aggfun=rowMaxs)

aggregateByTaxonomy  Aggregates a MRexperiment object or counts matrix to a particular level.

Description
Using the featureData information in the MRexperiment, calling aggregateByTaxonomy on a MRexperiment and a particular featureData column (i.e. 'genus') will aggregate counts to the desired level using the aggfun function (default colSums). Possible aggfun alternatives include colMeans and colMedians.

Usage
aggregateByTaxonomy(
  obj,
  lvl,
  alternate = FALSE,
  norm = FALSE,
  log = FALSE,
  aggfun = colSums,
  sl = 1000,
  featureOrder = NULL,
  returnFullHierarchy = TRUE,
  out = "MRexperiment"
)

aggTax(
  obj,
  lvl,
  alternate = FALSE,
  norm = FALSE,
  log = FALSE,
  aggfun = colSums,
  sl = 1000,
  featureOrder = NULL,
Arguments

obj  A MRexperiment object or count matrix.
lvl  featureData column name from the MRexperiment object or if count matrix object a vector of labels.
alternate  Use the rowname for undefined OTUs instead of aggregating to "no_match".
norm  Whether to aggregate normalized counts or not.
log  Whether or not to log2 transform the counts - if MRexperiment object.
aggfun  Aggregation function.
sl  scaling value, default is 1000.
featureOrder  Hierarchy of levels in taxonomy as fData colnames
returnFullHierarchy  Boolean value to indicate return single column of fData or all columns of hierarchy
out  Either 'MRexperiment' or 'matrix'

Value

An aggregated count matrix.

Examples

data(mouseData)
aggregateByTaxonomy(mouseData[1:100,],lvl="class",norm=TRUE,aggfun=colSums)
# not run
# aggregateByTaxonomy(mouseData,lvl="class",norm=TRUE,aggfun=colMedians)
# aggTax(mouseData,lvl='phylum',norm=FALSE,aggfun=colSums)

biom2MRexperiment  Biom to MRexperiment objects

Description

Wrapper to convert biom files to MRexperiment objects.

Usage

biom2MRexperiment(obj)
calcNormFactors

Arguments

obj The biom object file.

Value

A MRexperiment object.

See Also

loadMeta loadPhenoData newMRexperiment loadBiom

Examples

library(biomformat)
rich_dense_file = system.file("extdata", "rich_dense_otu_table.biom", package = "biomformat")
x = biomformat::read_biom(rich_dense_file)
biom2MRexperiment(x)

calcNormFactors Cumulative sum scaling (css) normalization factors

Description

Return a vector of the the sum up to and including a quantile.

Usage

calcNormFactors(obj, p = cumNormStatFast(obj))

Arguments

obj An MRexperiment object or matrix.

p The pth quantile.

Value

Vector of the sum up to and including a sample’s pth quantile.

See Also

fitZig cumNormStatFast cumNorm

Examples

data(mouseData)
head(calcNormFactors(mouseData))
**calcPosComponent**  
*Positive component*

**Description**
Fit the positive (log-normal) component

**Usage**
calcPosComponent(mat, mod, weights)

**Arguments**
- **mat**: A matrix of normalized counts
- **mod**: A model matrix
- **weights**: Weight matrix for samples and counts

**See Also**
fitZeroLogNormal fitFeatureModel

---

**calcShrinkParameters**  
*Calculate shrinkage parameters*

**Description**
Calculate the shrunken variances and variance of parameters of interest across features.

**Usage**
calcShrinkParameters(fit, coef, mins2, exclude = NULL)

**Arguments**
- **fit**: A matrix of fits as outputted by calcZeroComponent or calcPosComponent
- **coef**: Coefficient of interest
- **mins2**: Minimum variance estimate
- **exclude**: Vector of features to exclude when shrinking

**See Also**
fitZeroLogNormal fitFeatureModel
**calcStandardError**

*Calculate the zero-inflated log-normal statistic’s standard error*

**Description**

Calculate the se for the model. Code modified from "Adjusting for covariates in zero-inflated gamma and zero-inflated log-normal models for semicontinuous data", ED Mills

**Usage**

`calcStandardError(mod, fitln, fitzero, coef = 2, exclude = NULL)`

**Arguments**

- `mod`: The zero component model matrix
- `fitln`: A matrix with parameters from the log-normal fit
- `fitzero`: A matrix with parameters from the logistic fit
- `coef`: Coefficient of interest
- `exclude`: List of features to exclude

**See Also**

- `fitZeroLogNormal`
- `fitFeatureModel`

**calculateEffectiveSamples**

*Estimated effective samples per feature*

**Description**

Calculates the number of estimated effective samples per feature from the output of a fitZig run. The estimated effective samples per feature is calculated as the sum_1^n (n = number of samples) 1-z_i where z_i is the posterior probability a feature belongs to the technical distribution.

**Usage**

`calculateEffectiveSamples(obj)`

**Arguments**

- `obj`: The output of fitZig run on a MResperiment object.

**Value**

A list of the estimated effective samples per feature.
calcZeroComponent

See Also

fitZig MRcoefs MRfulltable

calcZeroAdjustment  Calculate the zero-inflated component's adjustment factor

Description

Calculate the log ratio of average marginal probabilities for each sample having a positive count. This becomes the adjustment factor for the log fold change.

Usage

calcZeroAdjustment(fitln, fitzero, mod, coef, exclude = NULL)

Arguments

fitln  A matrix with parameters from the log-normal fit
fitzero  A matrix with parameters from the logistic fit
mod  The zero component model matrix
coef  Coefficient of interest
exclude  List of features to exclude

See Also

fitZeroLogNormal fitFeatureModel

calcZeroComponent  Zero component

Description

Fit the zero (logisitic) component

Usage

calcZeroComponent(mat, mod, weights)

Arguments

mat  A matrix of normalized counts
mod  A model matrix
weights  Weight matrix for samples and counts

See Also

fitZeroLogNormal fitFeatureModel
correctIndices

*Calculate the correct indices for the output of correlationTest*

### Description

Consider the upper triangular portion of a matrix of size nxn. Results from the `correlationTest` are output as the combination of two vectors, correlation statistic and p-values. The order of the output is 1vs2, 1vs3, 1vs4, etc. The `correctIndices` returns the correct indices to fill a correlation matrix or correlation-pvalue matrix.

### Usage

```r
correctIndices(n)
```

### Arguments

- `n` The number of features compared by `correlationTest` (nrow(mat)).

### Value

A vector of the indices for an upper triangular matrix.

### See Also

`correlationTest`

### Examples

```r
data(mouseData)
mat = MRcounts(mouseData)[55:60,]
cors = correlationTest(mat)
ind = correctIndices(nrow(mat))

cormat = as.matrix(dist(mat))
cormat[cormat>0] = 0
cormat[upper.tri(cormat)][ind] = cors[,1]
table(cormat[1,-1] - cors[1:5,1])
```
correlationTest

Correlation of each row of a matrix or MExperiment object

Description

Calculates the (pairwise) correlation statistics and associated p-values of a matrix or the correlation of each row with a vector.

Usage

correlationTest(
  obj,
  y = NULL,
  method = "pearson",
  alternative = "two.sided",
  norm = TRUE,
  log = TRUE,
  cores = 1,
  override = FALSE,
  ...
)

Arguments

obj A MExperiment object or count matrix.
y Vector of length ncol(obj) to compare to.
method One of 'pearson','spearman', or 'kendall'.
alternative Indicates the alternative hypothesis and must be one of 'two.sided', 'greater' (positive) or 'less'(negative). You can specify just the initial letter.
norm Whether to aggregate normalized counts or not - if MExperiment object.
log Whether or not to log2 transform the counts - if MExperiment object.
cores Number of cores to use.
override If the number of rows to test is over a thousand the test will not commence (unless override==TRUE).
... Extra parameters for mclapply.

Value

A matrix of size choose(number of rows, 2) by 2. The first column corresponds to the correlation value. The second column the p-value.

See Also

correctIndices
**Examples**

```r
# Pairwise correlation of raw counts
data(mouseData)
cors = correlationTest(mouseData[1:10,], norm=FALSE, log=FALSE)
head(cors)

mat = MRcounts(mouseData)[1:10,]
cormat = as.matrix(dist(mat))  # Creating a matrix
cormat[cormat>0] = 0  # Creating an empty matrix
ind = correctIndices(nrow(mat))
cormat[upper.tri(cormat)][ind] = cors[,1]
table(cormat[1,-1] - cors[1:9,1])

# Correlation of raw counts with a vector (library size in this case)
data(mouseData)
cors = correlationTest(mouseData[1:10,], libSize(mouseData), norm=FALSE, log=FALSE)
head(cors)
```

**cumNorm**

*Cumulative sum scaling normalization*

**Description**

Calculates each column’s quantile and calculates the sum up to and including that quantile.

**Usage**

```r
cumNorm(obj, p = cumNormStatFast(obj))
```

**Arguments**

- `obj`: An MRexperiment object.
- `p`: The pth quantile.

**Value**

Object with the normalization factors stored as a vector of the sum up to and including a sample’s pth quantile.

**See Also**

`fitZig`, `cumNormStat`

**Examples**

```r
data(mouseData)
mouseData <- cumNorm(mouseData)
head(normFactors(mouseData))
```
cumNormMat

Cumulative sum scaling factors.

Description
Calculates each column’s quantile and calculates the sum up to and including that quantile.

Usage
```
cumNormMat(obj, p = cumNormStatFast(obj), sl = 1000)
```

Arguments
- `obj`: A matrix or MReperiment object.
- `p`: The pth quantile.
- `sl`: The value to scale by (default=1000).

Value
Returns a matrix normalized by scaling counts up to and including the pth quantile.

See Also
- `fitZig`
- `cumNorm`

Examples
```
data(mouseData)
head(cumNormMat(mouseData))
```

cumNormStat

Cumulative sum scaling percentile selection

Description
Calculates the percentile for which to sum counts up to and scale by. cumNormStat might be deprecated one day. Deviates from methods in Nature Methods paper by making use row means for generating reference.

Usage
```
cumNormStat(obj, qFlag = TRUE, pFlag = FALSE, rel = 0.1, ...)
```
**cumNormStatFast**

**Arguments**

- `obj`: A matrix or MRexperiment object.
- `qFlag`: Flag to either calculate the proper percentile using R’s step-wise quantile function or approximate function.
- `pFlag`: Plot the relative difference of the median deviance from the reference.
- `rel`: Cutoff for the relative difference from one median difference from the reference to the next.
- `...`: Applicable if `pFlag` == `TRUE`. Additional plotting parameters.

**Value**

Percentile for which to scale data

**See Also**

`fitZig` `cumNorm` `cumNormStatFast`

**Examples**

```r
data(mouseData)
p = round(cumNormStat(mouseData,pFlag=FALSE),digits=2)
```

---

**cumNormStatFast**

*Cumulative sum scaling percentile selection*

**Description**

Calculates the percentile for which to sum counts up to and scale by. Faster version than available in `cumNormStat`. Deviates from methods described in Nature Methods by making use of ro means for reference.

**Usage**

`cumNormStatFast(obj, pFlag = FALSE, rel = 0.1, ...)`

**Arguments**

- `obj`: A matrix or MRexperiment object.
- `pFlag`: Plot the median difference quantiles.
- `rel`: Cutoff for the relative difference from one median difference from the reference to the next.
- `...`: Applicable if `pFlag` == `TRUE`. Additional plotting parameters.
doCountMStep

Value

Percentile for which to scale data

See Also

fitZig cumNorm cumNormStat

Examples

data(mouseData)
p = round(cumNormStatFast(mouseData,pFlag=FALSE),digits=2)

doCountMStep

Compute the Maximization step calculation for features still active.

Description

Maximization step is solved by weighted least squares. The function also computes counts residuals.

Usage

doCountMStep(z, y, mmCount, stillActive, fit2 = NULL, dfMethod = "modified")

Arguments

z
  Matrix (m x n) of estimate responsibilities (probabilities that a count comes from a spike distribution at 0).

y
  Matrix (m x n) of count observations.

mmCount
  Model matrix for the count distribution.

stillActive
  Boolean vector of size M, indicating whether a feature converged or not.

fit2
  Previous fit of the count model.

dfMethod
  Either 'default' or 'modified' (by responsibilities)

Details

Maximum-likelihood estimates are approximated using the EM algorithm where we treat mixture membership $\delta_{ij} = 1$ if $y_{ij}$ is generated from the zero point mass as latent indicator variables. The density is defined as $f_{\text{zig}}(y_{ij} = \pi_j(S_j) f_0(y_{ij}) + (1-\pi_j(S_j)) f_{\text{count}}(y_{ij}; \mu_i, \sigma_i^2)$. The log-likelihood in this extended model is $(1-\delta_{ij}) \log f_{\text{count}}(y_{ij}; \mu_i, \sigma_i^2) + \delta_{ij} \log \pi_j(S_j) + (1-\delta_{ij}) \log (1-\pi_j(S_j))$. The responsibilities are defined as $z_{ij} = \text{pr}(\delta_{ij}=1 | \text{data})$. 
doEStep

Value

Update matrix (m x n) of estimate responsibilities (probabilities that a count comes from a spike distribution at 0).

See Also

fitZig

doEStep

Compute the Expectation step.

Description

Estimates the responsibilities $z_{ij} = \frac{\pi_j}{\sum_j I_0(y_{ij}) I_0(y_{ij} + (1-\pi_j) f_{\text{count}}(y_{ij})}$.

Usage

doEStep(countResiduals, zeroResiduals, zeroIndices)

Arguments

- countResiduals: Residuals from the count model.
- zeroResiduals: Residuals from the zero model.
- zeroIndices: Index (matrix m x n) of counts that are zero/non-zero.

Details

Maximum-likelihood estimates are approximated using the EM algorithm where we treat mixture membership $\delta_{ij} = 1$ if $y_{ij}$ is generated from the zero point mass as latent indicator variables. The density is defined as $f_{\text{zig}}(y_{ij} = \pi_j(S_j) f_0(y_{ij}) + (1-\pi_j (S_j)) f_{\text{count}}(y_{ij}; \mu_i, \sigma_i^2)$. The log-likelihood in this extended model is $\log f_{\text{count}}(y_{ij}; \mu_i, \sigma_i^2) + \delta_{ij} \log \pi_j(s_j) + (1-\delta_{ij}) \log (1-\pi_j(s_j))$. The responsibilities are defined as $z_{ij} = p(\delta_{ij} = 1 | \text{data})$.

Value

Updated matrix (m x n) of estimate responsibilities (probabilities that a count comes from a spike distribution at 0).

See Also

fitZig
doZeroMStep  

Compute the zero Maximization step.

Description

Performs Maximization step calculation for the mixture components. Uses least squares to fit the parameters of the mean of the logistic distribution. $\pi_j = \sum_i^M \frac{1}{M} z_{ij}$ Maximum-likelihood estimates are approximated using the EM algorithm where we treat mixture membership $\delta_{ij} = 1$ if $y_{ij}$ is generated from the zero point mass as latent indicator variables. The density is defined as $f_{\text{zig}}(y_{ij} = \pi_j(S_j) \cdot f_0(y_{ij}) + (1 - \pi_j(S_j)) \cdot f_{\text{count}}(y_{ij}; \mu_i, \sigma_i^2)$. The log-likelihood in this extended model is $(1 - \delta_{ij}) \log f_{\text{count}}(y; \mu_i, \sigma_i^2) + \delta_{ij} \log \pi_j(S_j) + (1 - \delta_{ij}) \log (1 - \pi_j(S_j))$. The responsibilities are defined as $z_{ij} = \Pr(\delta_{ij}=1 | data)$.

Usage

doZeroMStep(z, zeroIndices, mmZero)

Arguments

- **z**: Matrix (m x n) of estimate responsibilities (probabilities that a count comes from a spike distribution at 0).
- **zeroIndices**: Index (matrix m x n) of counts that are zero/non-zero.
- **mmZero**: The zero model, the model matrix to account for the change in the number of OTUs observed as a linear effect of the depth of coverage.

Value

List of the zero fit (zero mean model) coefficients, variance - scale parameter (scalar), and normalized residuals of length sum(zeroIndices).

See Also

- fitZig

exportMat  

Export the normalized MRexperiment dataset as a matrix.

Description

This function allows the user to take a dataset of counts and output the dataset to the user’s workspace as a tab-delimited file, etc.
Usage

```r
exportMat(
  obj,
  log = TRUE,
  norm = TRUE,
  sep = "\t",
  file = "~/Desktop/matrix.tsv"
)
```

Arguments

- **obj** A MRexperiment object or count matrix.
- **log** Whether or not to log transform the counts - if MRexperiment object.
- **norm** Whether or not to normalize the counts - if MRexperiment object.
- **sep** Separator for writing out the count matrix.
- **file** Output file name.

Value

NA

See Also

cumNorm

Examples

```r
data(lungData)
dataDirectory <- system.file("extdata", package="metagenomeSeq")
exportMat(lungData[,1:5],file=file.path(dataDirectory,"tmp.tsv"))
head(read.csv(file=file.path(dataDirectory,"tmp.tsv"),sep="\t"))
```

---

**exportStats** Various statistics of the count data.

Description

A matrix of values for each sample. The matrix consists of sample ids, the sample scaling factor, quantile value, the number identified features, and library size (depth of coverage).

Usage

```r
exportStats(obj, p = cumNormStat(obj), file = "~/Desktop/res.stats.tsv")
```
expSummary

Arguments

obj  A MRexperiment object with count data.
p  Quantile value to calculate the scaling factor and quantiles for the various samples.
file  Output file name.

Value

None.

See Also

cumNorm quantile

Examples

data(lungData)
dataDirectory <- system.file("extdata", package="metagenomeSeq")
exportStats(lungData[,1:5],file=file.path(dataDirectory,"tmp.tsv"),p=0.8)
head(read.csv(file=file.path(dataDirectory,"tmp.tsv"),sep="\t"))

expSummary  Access MRexperiment object experiment data

Description

The expSummary vectors represent the column (sample specific) sums of features, i.e. the total number of reads for a sample, libSize and also the normalization factors, normFactor.

Usage

expSummary(obj)

Arguments

obj  a MRexperiment object.

Value

Experiment summary table

Author(s)

Joseph N. Paulson, jpaulson@umiacs.umd.edu
extractMR

**Examples**

```r
data(mouseData)
expSummary(mouseData)
```

---

**extractMR**

*Extract the essentials of an MRexperiment.*

**Description**

Extract the essentials of an MRexperiment.

**Usage**

```r
extractMR(obj)
```

**Arguments**

- `obj` MRexperiment-class object.

**Value**

A list containing:

- `counts` : Count data
- `librarySize` : The column sums / library size / sequencing depth
- `normFactors` : The normalization scaling factors
- `pheno` : phenotype table
- `feat` : feature table

**Examples**

```r
data(mouseData)
head(metagenomeSeq::extractMR(mouseData))
```
filterData

*Filter datasets according to no. features present in features with at least a certain depth.*

**Description**

Filter the data based on the number of present features after filtering samples by depth of coverage. There are many ways to filter the object, this is just one way.

**Usage**

```r
filterData(obj, present = 1, depth = 1000)
```

**Arguments**

- `obj`: A MRexperiment object or count matrix.
- `present`: Features with at least 'present' positive samples.
- `depth`: Samples with at least this much depth of coverage.

**Value**

A MRexperiment object.

**Examples**

```r
data(mouseData)
filterData(mouseData)
```

---

fitDO

*Wrapper to calculate Discovery Odds Ratios on feature values.*

**Description**

This function returns a data frame of p-values, odds ratios, lower and upper confidence limits for every row of a matrix. The discovery odds ratio is calculated as using Fisher’s exact test on actual counts. The test’s hypothesis is whether or not the discovery of counts for a feature (of all counts) is found in greater proportion in a particular group.

**Usage**

```r
fitDO(obj, cl, norm = TRUE, log = TRUE, adjust.method = "fdr", cores = 1, ...)
```
fitFeatureModel

Computes differential abundance analysis using a zero-inflated log-normal model

Description

Wrapper to actually run zero-inflated log-normal model given a MRexperiment object and model matrix. User can decide to shrink parameter estimates.

Usage

fitFeatureModel(obj, mod, coef = 2, B = 1, szero = FALSE, spos = TRUE)
Arguments

obj A MRexperiment object with count data.
mod The model for the count distribution.
coef Coefficient of interest to grab log fold-changes.
B Number of bootstraps to perform if >1. If >1 performs permutation test.
szero TRUE/FALSE, shrink zero component parameters.
spos TRUE/FALSE, shrink positive component parameters.

Value

A list of objects including:
- call - the call made to fitFeatureModel
- fitZeroLogNormal - list of parameter estimates for the zero-inflated log normal model
- design - model matrix
- taxa - taxa names
- counts - count matrix
- pvalues - calculated p-values
- permuttedfits - permutted z-score estimates under the null

See Also
cumNorm

Examples

data(lungData)
lungData = lungData[,!is.na(pData(lungData)$SmokingStatus)]
lungData=filterData(lungData,present=30,depth=1)
lungData <- cumNorm(lungData, p=.5)
s <- normFactors(lungData)
pd <- pData(lungData)
mod <- model.matrix(~1+SmokingStatus, data=pd)
lungres1 = fitFeatureModel(lungData,mod)
**fitLogNormal**

Slots

- **call** the call made to fitFeatureModel
- **fitZeroLogNormal** list of parameter estimates for the zero-inflated log normal model
- **design** model matrix
- **taxa** taxa names
- **counts** count matrix
- **pvalues** calculated p-values
- **permuttedFits** permutted z-score estimates under the null

---

**fitLogNormal**  
*Computes a log-normal linear model and permutation based p-values.*

---

**Description**

Wrapper to perform the permutation test on the t-statistic. This is the original method employed by metastats (for non-sparse large samples). We include CSS normalization though (optional) and log2 transform the data. In this method the null distribution is not assumed to be a t-dist.

**Usage**

```r
fitLogNormal(obj, mod, useCSSoffset = TRUE, B = 1000, coef = 2, sl = 1000)
```

**Arguments**

- **obj**  
  A MRexperiment object with count data.

- **mod**  
  The model for the count distribution.

- **useCSSoffset**  
  Boolean, whether to include the default scaling parameters in the model or not.

- **B**  
  Number of permutations.

- **coef**  
  The coefficient of interest.

- **sl**  
  The value to scale by (default=1000).

**Value**

Call made, fit object from lmFit, t-statistics and p-values for each feature.

**Examples**

```r
# This is a simple demonstration
data(lungData)
k = grep("Extraction.Control",pData(lungData)$SampleType)
lungTrim = lungData[-k]
k = which(rowSums(MRcounts(lungTrim)>0)<30)
lungTrim = cumNorm(lungTrim)
lungTrim = lungTrim[-k,]
```
smokingStatus = pData(lungTrim)$SmokingStatus
mod = model.matrix(~smokingStatus)
fit = fitLogNormal(obj = lungTrim, mod=mod, B=1)

fitMultipleTimeSeries

Discover differentially abundant time intervals for all bacteria

Description

Calculate time intervals of significant differential abundance over all bacteria of a particularly specified level (lvl). If not lvl is specified, all OTUs are analyzed. Warning, function can take a while

Usage

fitMultipleTimeSeries(obj, lvl = NULL, B = 1, featureOrder = NULL, ...)

Arguments

obj metagenomeSeq MRexperiment-class object.
lvl Vector or name of column in featureData of MRexperiment-class object for aggregating counts (if not OTU level).
B Number of permutations to perform.
featureOrder Hierarchy of levels in taxonomy as fData colnames
... Options for fitTimeSeries, except feature.

Value

List of lists of matrices of time point intervals of interest, Difference in abundance area and p-value, fit, area permutations.

A list of lists for which each includes:

- timeIntervals - Matrix of time point intervals of interest, area of differential abundance, and pvalue.
- data - Data frame of abundance, class indicator, time, and id input.
- fit - Data frame of fitted values of the difference in abundance, standard error estimates and timepoints interpolated over.
- perm - Differential abundance area estimates for each permutation.
- call - Function call.

See Also

cumNorm fitSSTimeSeries fitTimeSeries
**Examples**

```r
data(mouseData)
res = fitMultipleTimeSeries(obj=mouseData, lvl='phylum', class='status',
                           id='mouseID', time='relativeTime', B=1)
```

**Description**

This function returns a data frame of p-values, odds ratios, lower and upper confidence limits for every row of a matrix.

**Usage**

```r
fitPA(obj, cl, thres = 0, adjust.method = "fdr", cores = 1, ...)
```

**Arguments**

- `obj` A MRexperiment object with a count matrix, or a simple count matrix.
- `cl` Group comparison
- `thres` Threshold for defining presence/absence.
- `adjust.method` Method to adjust p-values by. Default is "FDR". Options include "holm", "hochberg", "hommel", "bonferroni", "BH", "BY", "fdr", "none". See `p.adjust` for more details.
- `cores` Number of cores to use.
- `...` Extra parameters for makeCluster

**Value**

Matrix of odds ratios, p-values, lower and upper confidence intervals

**See Also**

`cumNorm`  `fitZig`  `fitDO`  `fitMeta`

**Examples**

```r
data(lungData)
k = grep("Extraction.Control", pData(lungData)$SampleType)
lungTrim = lungData[-,k]
lungTrim = lungTrim[-which(rowSums(MRcounts(lungTrim)>0)<20),]
res = fitPA(lungTrim, pData(lungTrim)$SmokingStatus);
head(res)
```
Discover differentially abundant time intervals using SS-Anova

**Description**

Calculate time intervals of interest using SS-Anova fitted models. Fitting is performed uses Smoothing Spline ANOVA (SS-Anova) to find interesting intervals of time. Given observations at different time points for two groups, fitSSTimeSeries calculates a function that models the difference in abundance between two groups across all time. Using permutations we estimate a null distribution of areas for the time intervals of interest and report significant intervals of time. Use of the function for analyses should cite: "Finding regions of interest in high throughput genomics data using smoothing splines" Talukder H, Paulson JN, Bravo HC. (In preparation)

**Usage**

```r
fitSSTimeSeries(
  obj, 
  formula, 
  feature, 
  class, 
  time, 
  id, 
  lvl = NULL, 
  include = c("class", "time:class"), 
  C = 0, 
  B = 1000, 
  norm = TRUE, 
  log = TRUE, 
  sl = 1000, 
  featureOrder = NULL, 
  ...
)
```

**Arguments**

- **obj**: metagenomeSeq MRexperiment-class object.
- **formula**: Formula for ssanova. Of the form: abundance ~ ... where ... includes any pData slot value.
- **feature**: Name or row of feature of interest.
- **class**: Name of column in phenoData of MRexperiment-class object for class membership.
- **time**: Name of column in phenoData of MRexperiment-class object for relative time.
- **id**: Name of column in phenoData of MRexperiment-class object for sample id.
- **lvl**: Vector or name of column in featureData of MRexperiment-class object for aggregating counts (if not OTU level).
fitTimeSeries

Description

Discover differentially abundant time intervals

Calculate time intervals of significant differential abundance. Currently only one method is implemented (ssanova). fitSSTimeSeries is called with method="ssanova".

Value

List of matrix of time point intervals of interest, Difference in abundance area and p-value, fit, area permutations, and call.

A list of objects including:

- timeIntervals - Matrix of time point intervals of interest, area of differential abundance, and pvalue.
- data - Data frame of abundance, class indicator, time, and id input.
- fit - Data frame of fitted values of the difference in abundance, standard error estimates and timepoints interpolated over.
- perm - Differential abundance area estimates for each permutation.
- call - Function call.

See Also
cumNorm ssFit ssIntervalCandidate ssPerm ssPermAnalysis plotTimeSeries

Examples

data(mouseData)
res = fitSSTimeSeries(obj=mouseData,feature="Actinobacteria",
                  class="status",id="mouseID",time="relativeTime",lvl='class',B=2)
Usage

```r
fitTimeSeries(
  obj,
  formula,
  feature,
  class,
  time,
  id,
  method = c("ssanova"),
  lvl = NULL,
  include = c("class", "time:class"),
  C = 0,
  B = 1000,
  norm = TRUE,
  log = TRUE,
  sl = 1000,
  featureOrder = NULL,
  ...
)
```

Arguments

- **obj**: `metagenomeSeq MRexperiment-class` object.
- **formula**: Formula for ssanova. Of the form: abundance ~ ... where ... includes any pData slot value.
- **feature**: Name or row of feature of interest.
- **class**: Name of column in phenoData of MRexperiment-class object for class membership.
- **time**: Name of column in phenoData of MRexperiment-class object for relative time.
- **id**: Name of column in phenoData of MRexperiment-class object for sample id.
- **method**: Method to estimate time intervals of differentially abundant bacteria (only ssanova method implemented currently).
- **lvl**: Vector or name of column in featureData of MRexperiment-class object for aggregating counts (if not OTU level).
- **include**: Parameters to include in prediction.
- **C**: Value for which difference function has to be larger or smaller than (default 0).
- **B**: Number of permutations to perform.
- **norm**: When aggregating counts to normalize or not.
- **log**: Log2 transform.
- **sl**: Scaling value.
- **featureOrder**: Hierarchy of levels in taxonomy as fData colnames
- **...**: Options for ssanova
fitZeroLogNormal

Value

List of matrix of time point intervals of interest, Difference in abundance area and p-value, fit, area permutations, and call.

A list of objects including:

- `timeIntervals` - Matrix of time point intervals of interest, area of differential abundance, and p-value.
- `data` - Data frame of abundance, class indicator, time, and id input.
- `fit` - Data frame of fitted values of the difference in abundance, standard error estimates and timepoints interpolated over.
- `perm` - Differential abundance area estimates for each permutation.
- `call` - Function call.

cumNorm fitSSTimeSeries plotTimeSeries

Examples

data(mouseData)
res = fitTimeSeries(obj=mouseData, feature="Actinobacteria", class="status", id="mouseID", time="relativeTime", lvl='class', B=2)

Description

Run the zero-inflated log-normal model given a MRexperiment object and model matrix. Not for the average user, assumes structure of the model matrix.

Usage

fitZeroLogNormal(obj, mod, coef = 2, szero = TRUE, spos = TRUE)

Arguments

- `obj` A MRexperiment object with count data.
- `mod` The model for the count distribution.
- `coef` Coefficient of interest to grab log fold-changes.
- `szero` TRUE/FALSE, shrink zero component parameters.
- `spos` TRUE/FALSE, shrink positive component parameters.
Value

A list of objects including:

- logFC - the log fold-change estimates
- adjFactor - the adjustment factor based on the zero component
- se - standard error estimates
- fitln - parameters from the log-normal fit
- fitzero - parameters from the logistic fit
- zeroRidge - output from the ridge regression
- posRidge - output from the ridge regression
- tauPos - estimated tau^2 for positive component
- tauZero - estimated tau^2 for zero component
- exclude - features to exclude for various reasons, e.g. all zeros
- zeroExclude - features to exclude for various reasons, e.g. all zeros

See Also

cumNorm fitFeatureModel

---

**fitZig**  
Computes the weighted fold-change estimates and t-statistics.

---

**Description**

Wrapper to actually run the Expectation-maximization algorithm and estimate $f_{count}$ fits. Maximum-likelihood estimates are approximated using the EM algorithm where we treat mixture membership $\delta_{ij} = 1$ if $y_{ij}$ is generated from the zero point mass as latent indicator variables. The density is defined as $f_{zig}(y_{ij} = \pi_j(S_j)*f_0(y_{ij}) +(1-\pi_j (S_j)) * f_{count}(y_{ij}; \mu_i, \sigma_i^2)$. The log-likelihood in this extended model is: $(1-\delta_{ij}) log f_{count}(y;\mu_i,\sigma_i^2) + \delta_{ij} log \pi_j(s_j) + (1-\delta_{ij}) log (1-\pi_j (s_j))$. The responsibilities are defined as $z_{ij} = pr(\delta_{ij}=1 | data)$.

**Usage**

```r
fitZig(
  obj,
  mod,
  zeroMod = NULL,
  useCSSoffset = TRUE,
  control = zigControl(),
  useMixedModel = FALSE,
  ...)
```

Arguments

- obj: A MRexperiment object with count data.
- mod: The model for the count distribution.
- zeroMod: The zero model, the model to account for the change in the number of OTUs observed as a linear effect of the depth of coverage.
- useCSSoffset: Boolean, whether to include the default scaling parameters in the model or not.
- control: The settings for fitZig.
- useMixedModel: Estimate the correlation between duplicate features or replicates using duplicateCorrelation.
- ...: Additional parameters for duplicateCorrelation.

Value

A list of objects including:

- call: the call made to fitZig
- fit: 'MLArrayLM' Limma object of the weighted fit
- countResiduals: standardized residuals of the fit
- z: matrix of the posterior probabilities
- eb: output of eBayes, moderated t-statistics, moderated F-statistics, etc
- taxa: vector of the taxa names
- counts: the original count matrix input
- zeroMod: the zero model matrix
- zeroCoef: the zero model fitted results
- stillActive: convergence
- stillActiveNLL: nll at convergence
- dupcor: correlation of duplicates

See Also

Examples

# This is a simple demonstration
data(lungData)
k = grep("Extraction.Control",pData(lungData)$SampleType)
lungTrim = lungData[-k]
k = which(rowSums(MRcounts(lungTrim)>0)<30)
lungTrim = cumNorm(lungTrim)
lungTrim = lungTrim[-k,]
smokingStatus = pData(lungTrim)$SmokingStatus
mod = model.matrix(~smokingStatus)
# The maxit is not meant to be 1 - this is for demonstration/speed
settings = zigControl(maxit=1,verbose=FALSE)
fit = fitZig(obj = lungTrim,mod=mod,control=settings)
Class `fitZigResults` – a formal class for storing results from a fitZig call

**Description**

This class contains all of the same information expected from a fitZig call, but it is defined in the S4 style as opposed to being stored as a list.

**Slots**

- `call` the call made to fitZig
- `fit` 'MLArrayLM' Limma object of the weighted fit
- `countResiduals` standardized residuals of the fit
- `z` matrix of the posterior probabilities. It is defined as $z_{ij} = pr(delta_{ij}=1 | data)$
- `zUsed` used in getZ
- `eb` output of eBayes, moderated t-statistics, moderated F-statistics, etc
- `taxa` vector of the taxa names
- `counts` the original count matrix input
- `zeroMod` the zero model matrix
- `zeroCoef` the zero model fitted results
- `stillActive` convergence
- `stillActiveNLL` nll at convergence
- `dupcor` correlation of duplicates

---

**getCountDensity**

*Compute the value of the count density function from the count model residuals.*

**Description**

Calculate density values from a normal: $f(x) = \frac{1}{\sqrt{2 \pi \sigma}} e^{-\frac{(x - \mu)^2}{2 \sigma^2}}$. Maximum-likelihood estimates are approximated using the EM algorithm where we treat mixture membership $deta_{ij} = 1$ if $y_{ij}$ is generated from the zero point mass as latent indicator variables. The density is defined as $f_{zig}(y_{ij} = \pi_j(S_j) \cdot f_0(y_{ij}) + (1-\pi_j(S_j)) \cdot f_{count}(y_{ij};\mu_i,\sigma_i^2)$. The log-likelihood in this extended model is $(1-delta_{ij}) \log f_{count}(y;\mu_i,\sigma_i^2) + delta_{ij} \log \pi_j(S_j) + (1-delta_{ij}) \log (1-\pi_j(S_j))$. The responsibilities are defined as $z_{ij} = pr(delta_{ij}=1 | data)$.

**Usage**

`getCountDensity(residuals, log = FALSE)`
**getEpsilon**

**Arguments**

- residuals: Residuals from the count model.
- log: Whether or not we are calculating from a log-normal distribution.

**Value**

Density values from the count model residuals.

**See Also**

- fitZig

---

**Description**

Maximum-likelihood estimates are approximated using the EM algorithm where we treat mixture membership $\delta_{ij} = 1$ if $y_{ij}$ is generated from the zero point mass as latent indicator variables. The log-likelihood in this extended model is $(1-\delta_{ij}) \log f_{\text{count}}(y_i; \mu_i, \sigma_i^2) + \delta_{ij} \log \pi_j(s_j) + (1-\delta_{ij}) \log (1-\pi_j(s_j))$. The responsibilities are defined as $z_{ij} = \Pr(\delta_{ij}=1 | data)$.

**Usage**

getEpsilon(nll, nll0ld)

**Arguments**

- nll: Vector of size $M$ with the current negative log-likelihoods.
- nll0ld: Vector of size $M$ with the previous iterations negative log-likelihoods.

**Value**

Vector of size $M$ of the relative differences between the previous and current iteration nll.

**See Also**

- fitZig
getNegativeLogLikelihoods

Calculate the negative log-likelihoods for the various features given the residuals.

Description

Maximum-likelihood estimates are approximated using the EM algorithm where we treat mixture membership $\delta_{ij} = 1$ if $y_{ij}$ is generated from the zero point mass as latent indicator variables. The log-likelihood in this extended model is $(1 - \delta_{ij}) \log f_{count}(y; \mu_i, \sigma_i^2) + \delta_{ij} \log \pi_j(s_j) + (1 - \delta_{ij}) \log (1 - \pi_j(s_j))$. The responsibilities are defined as $z_{ij} = \text{pr}(\delta_{ij}=1 | \text{data and current values})$.

Usage

getNegativeLogLikelihoods(z, countResiduals, zeroResiduals)

Arguments

- `z` Matrix (m x n) of estimate responsibilities (probabilities that a count comes from a spike distribution at 0).
- `countResiduals` Residuals from the count model.
- `zeroResiduals` Residuals from the zero model.

Value

Vector of size M of the negative log-likelihoods for the various features.

See Also

fitZig

geti

Calculate the mixture proportions from the zero model / spike mass model residuals.

Description

$F(x) = 1 / (1 + \exp(-(x-m)/s))$ (the CDF of the logistic distribution). Provides the probability that a real-valued random variable X with a given probability distribution will be found at a value less than or equal to x. The output are the mixture proportions for the samples given the residuals from the zero model.

Usage

geti(residuals)
getZ

Arguments

residuals Residuals from the zero model.

Value

Mixture proportions for each sample.

See Also

fitZig

getz

Calculate the current Z estimate responsibilities (posterior probabilities)

Description

Calculate the current Z estimate responsibilities (posterior probabilities)

Usage

getz(z, zUsed, stillActive, nll, nllUSED)

Arguments

z Matrix (m x n) of estimate responsibilities (probabilities that a count comes from a spike distribution at 0).
zUsed Matrix (m x n) of estimate responsibilities (probabilities that a count comes from a spike distribution at 0) that are actually used (following convergence).
stillActive A vector of size M booleans saying if a feature is still active or not.
nll Vector of size M with the current negative log-likelihoods.
nllUSED Vector of size M with the converged negative log-likelihoods.

Value

A list of updated zUsed and nllUSED.

See Also

fitZig
isItStillActive

Function to determine if a feature is still active.

Description

In the Expectation Maximization routine features posterior probabilities routinely converge based on a tolerance threshold. This function checks whether or not the feature’s negative log-likelihood (measure of the fit) has changed or not.

Usage

isItStillActive(eps, tol, stillActive, stillActiveNLL, nll)

Arguments

eps Vector of size M (features) representing the relative difference between the new nll and old nll.
tol The threshold tolerance for the difference
stillActive A vector of size M booleans saying if a feature is still active or not.
stillActiveNLL A vector of size M recording the negative log-likelihoods of the various features, updated for those still active.
nll Vector of size M with the current negative log-likelihoods.

Value

None.

See Also

fitZig

libSize

Access sample depth of coverage from MRexperiment object

Description

Access the libSize vector represents the column (sample specific) sums of features, i.e. the total number of reads for a sample or depth of coverage. It is used by fitZig.

Usage

libSize(object)
Arguments

object a MRexperiment object

Value

Library sizes

Author(s)

Joseph N. Paulson

Examples

data(lungData)
head(libSize(lungData))

**libSize<-**

*Replace the library sizes in a MRexperiment object*

Description

Function to replace the scaling factors, aka the library sizes, of samples in a MRexperiment object.

Usage

```r
## S4 replacement method for signature 'MRexperiment,numeric'
libSize(object) <- value
```

Arguments

object a MRexperiment object

value vector of library sizes

Value

vector library sizes

Author(s)

Joseph N. Paulson

Examples

data(lungData)
head(libSize(lungData) <- rnorm(1))

loadBiom

Load objects organized in the Biom format.

Description

Wrapper to load Biom formatted object.

Usage

```r
loadBiom(file)
```

Arguments

- `file` The biom object filepath.

Value

A MRexperiment object.

See Also

loadMeta loadPhenoData newMRexperiment biom2MRexperiment

Examples

```r
#library(biomformat)
rich_dense_file = system.file("extdata", "rich_dense_otu_table.biom", package = "biomformat")
x = loadBiom(rich_dense_file)
x
```

loadMeta

Load a count dataset associated with a study.

Description

Load a matrix of OTUs in a tab delimited format.

Usage

```r
loadMeta(file, sep = "\t")
```

Arguments

- `file` Path and filename of the actual data file.
- `sep` File delimiter.
**loadMetaQ**

Value

A list with objects 'counts' and 'taxa'.

See Also

loadPhenoData

Examples

```r
dataDirectory <- system.file("extdata", package="metagenomeSeq")
lung = loadMeta(file.path(dataDirectory,"CHK_NAME.otus.count.csv"))
```

---

**loadMetaQ**  
*Load a count dataset associated with a study set up in a Qiime format.*

Description

Load a matrix of OTUs in Qiime's format

Usage

`loadMetaQ(file)`

Arguments

- `file` Path and filename of the actual data file.

Value

An list with 'counts' containing the count data, 'taxa' containing the otu annotation, and 'otus'.

See Also

loadMeta loadPhenoData

Examples

```r
# see vignette
```
loadPhenoData  Load a clinical/phenotypic dataset associated with a study.

Description

Load a matrix of metadata associated with a study.

Usage

loadPhenoData(file, tran = TRUE, sep = "\t")

Arguments

file Path and filename of the actual clinical file.
tran Boolean. If the covariates are along the columns and samples along the rows, then tran should equal TRUE.
sep The separator for the file.

Value

The metadata as a dataframe.

See Also

loadMeta

Examples

dataDirectory <- system.file("extdata", package="metagenomeSeq")
clin = loadPhenoData(file.path(dataDirectory,"CHK_clinical.csv"),tran=TRUE)

lungData  OTU abundance matrix of samples from a smoker/non-smoker study

Description

This is a list with a matrix of OTU counts, OTU names, taxa annotations for each OTU, and phenotypic data. Samples along the columns and OTUs along the rows.

Format

A list of OTU matrix, taxa, otus, and phenotypes
**makeLabels**

**Value**

MRexperiment-class object of 16S lung samples.

**References**

---

**makeLabels**  
*Function to make labels simpler*

**Description**

Beginning to transition to better axes for plots

**Usage**

```r
makeLabels(x = "samples", y = "abundance", norm, log)
```

**Arguments**

- `x`  
  string for the x-axis
- `y`  
  string for the y-axis
- `norm`  
  is the data normalized?
- `log`  
  is the data logged?

**Value**

vector of x,y labels

**Examples**

```r
metagenomeSeq::makeLabels(norm=TRUE, log=TRUE)
```
mergeMRexperiments  \hspace{1cm} \textit{Merge two MRexperiment objects together}

**Description**

This function will take two MRexperiment objects and merge them together finding common OTUs. If there are OTUs not found in one of the two MRexperiments then a message will announce this and values will be coerced to zero for the second table.

**Usage**

\[
\text{mergeMRexperiments}(x, y)
\]

**Arguments**

- **x**: MRexperiment-class object 1.
- **y**: MRexperiment-class object 2.

**Value**

Merged MRexperiment-class object.

**Examples**

```r
data(mouseData)
newobj = mergeMRexperiments(mouseData,mouseData)
newobj

# let me know if people are interested in an option to merge by keys instead of row names.
data(lungData)
newobj = mergeMRexperiments(mouseData,lungData)
newobj
```

mergeTable \hspace{1cm} \textit{Merge two tables}

**Description**

Merge two tables

**Usage**

\[
\text{mergeTable}(x, y)
\]
Arguments

x Table 1.
y Table 2.

Value

Merged table

---

**metagenomeSeq-deprecated**

Deprecation functions in the metagenomeSeq package.

---

**Description**

These functions may be removed completely in the next release.

**Usage**

`deprecated_metagenomeSeq_function(x, value, ...)`

**Arguments**

- **x** For assignment operators, the object that will undergo a replacement (object inside parenthesis).
- **value** For assignment operators, the value to replace with (the right side of the assignment).
- **...** For functions other than assignment operators, parameters to be passed to the modern version of the function (see table).

---

**mouseData**

OTU abundance matrix of mice samples from a diet longitudinal study

---

**Description**

This is a list with a matrix of OTU counts, taxa annotations for each OTU, otu names, and vector of phenotypic data. Samples along the columns and OTUs along the rows.

**Format**

- A list of OTU matrix, taxa, otus, and phenotypes

**Value**

MRexperiment-class object of 16S mouse samples.
MRcoefs

Table of top-ranked features from fitZig or fitFeatureModel

Description

Extract a table of the top-ranked features from a linear model fit. This function will be updated soon to provide better flexibility similar to limma’s topTable.

Usage

MRcoefs(
  obj,
  by = 2,
  coef = NULL,
  number = 10,
  taxa = obj@taxa,
  uniqueNames = FALSE,
  adjustMethod = "fdr",
  alpha = 0.1,
  group = 0,
  eff = 0,
  numberEff = FALSE,
  counts = 0,
  file = NULL
)

Arguments

obj       Output of fitFeatureModel or fitZig.
by        Column number or column name specifying which coefficient or contrast of the linear model is of interest.
coef      Column number(s) or column name(s) specifying which coefficient or contrast of the linear model to display.
number    The number of bacterial features to pick out.
taxa      Taxa list.
uniqueNames Number the various taxa.
adjustMethod Method to adjust p-values by. Default is "FDR". Options include "holm", "hochberg", "hommel", "bonferroni", "BH", "BY", "fdr", "none". See \texttt{p.adjust} for more details. Additionally, options using independent hypothesis weighting (IHW) are available. See \texttt{MRihw} for more details.
alpha     Value for p-value significance threshold when running IHW. The default is set to 0.1
group

One of five choices, 0,1,2,3,4. 0: the sort is ordered by a decreasing absolute value coefficient fit. 1: the sort is ordered by the raw coefficient fit in decreasing order. 2: the sort is ordered by the raw coefficient fit in increasing order. 3: the sort is ordered by the p-value of the coefficient fit in increasing order. 4: no sorting.

eff

Filter features to have at least a "eff" quantile or number of effective samples.

numberEff

Boolean, whether eff should represent quantile (default/FALSE) or number.

counts

Filter features to have at least 'counts' counts.

file

Name of output file, including location, to save the table.

Value

Table of the top-ranked features determined by the linear fit’s coefficient.

MRcounts

Accessor for the counts slot of a MRexperiment object

Description

The counts slot holds the raw count data representing (along the rows) the number of reads annotated for a particular feature and (along the columns) the sample.

Usage

MRcounts(obj, norm = FALSE, log = FALSE, sl = 1000)
**Arguments**

- **obj**
  - a MRexperiment object.
- **norm**
  - logical indicating whether or not to return normalized counts.
- **log**
  - TRUE/FALSE whether or not to log2 transform scale.
- **sl**
  - The value to scale by (default=1000).

**Value**

Normalized or raw counts

**Author(s)**

Joseph N. Paulson, jpaulson@umiacs.umd.edu

**Examples**

```r
data(lungData)
head(MRcounts(lungData))
```

---

**MRexperiment**

*Class "MRexperiment" – a modified eSet object for the data from high-throughput sequencing experiments*

**Description**

This is the main class for metagenomeSeq.

**Objects from the Class**

Objects should be created with calls to `newMRexperiment`.

**Extends**

Class `eSet` (package 'Biobase'), directly. Class `VersionedBiobase` (package 'Biobase'), by class "eSet", distance 2. Class `Versioned` (package 'Biobase'), by class "eSet", distance 3.

**Methods**

Class-specific methods.

- Subset operation, taking two arguments and indexing the sample and variable. Returns an MRexperiment object, including relevant metadata. Setting `drop=TRUE` generates an error. Subsetting the data, the experiment summary slot is repopulated and pData is repopulated after calling factor (removing levels not present).
Note

Note: This is a summary for reference. For an explanation of the actual usage, see the vignette.

MRexperiments are the main class in use by metagenomeSeq. The class extends eSet and provides additional slots which are populated during the analysis pipeline.

MRexperiment datasets are created with calls to `newMRexperiment`. MRexperiment datasets contain raw count matrices (integers) accessible through `MRcounts`. Similarly, normalized count matrices can be accessed (following normalization) through `MRcounts` by calling norm=TRUE. Following an analysis, a matrix of posterior probabilities for counts is accessible through `posteriorProbs`.

The normalization factors used in analysis can be recovered by `normFactors`, as can the library sizes of samples (depths of coverage), `libSize`.

Similarly to other RNASeq bioconductor packages available, the rows of the matrix correspond to a feature (be it OTU, species, gene, etc.) and each column an experimental sample. Pertinent clinical information and potential confounding factors are stored in the phenoData slot (accessed via `pData`).

To populate the various slots in an MRexperiment several functions are run. 1) `cumNormStat` calculates the proper percentile to calculate normalization factors. The `cumNormStat` slot is populated.

2) `cumNorm` calculates the actual normalization factors using `p = cumNormStat`.

Other functions will place subsequent matrices (normalized counts (`cumNormMat`), posterior probabilities (`posteriorProbs`))

As mentioned above, MRexperiment is derived from the virtual class, eSet and thereby has a phenoData slot which allows for sample annotation. In the phenoData data frame factors are stored. The normalization factors and library size information is stored in a slot called `expSummary` that is an annotated data frame and is repopulated for subsetted data.

Examples

# See vignette

```
MRexperiment2biom
```

Description

Wrapper to convert MRexperiment objects to biom objects.

Usage

```
MRexperiment2biom(
  obj,
  id = NULL,
  norm = FALSE,
  log = FALSE,
  sl = 1000,
  qiimeVersion = TRUE
)
```
Arguments

obj       The MRexperiment object.
id       Optional id for the biom matrix.
norm     normalize count table
log      log2 transform count table
sl       scaling factor for normalized counts.
qiimeVersion Format fData according to QIIME specifications (assumes only taxonomy in fData).

Value

A biom object.

Description

Extract a table of the top-ranked features from a linear model fit. This function will be updated soon to provide better flexibility similar to limma’s topTable. This function differs from link{MRcoefs} in that it provides other information about the presence or absence of features to help ensure significant features called are moderately present.

Usage

MRfulltable(
  obj,
  by = 2,
  coef = NULL,
  number = 10,
  taxa = obj@taxa,
  uniqueNames = FALSE,
  adjustMethod = "fdr",
  group = 0,
  eff = 0,
  numberEff = FALSE,
  ncounts = 0,
  file = NULL
)
Arguments

obj        Output of fitFeatureModel or fitZig.
by        Column number or column name specifying which coefficient or contrast of the
linear model is of interest.
coef       Column number(s) or column name(s) specifying which coefficient or contrast
of the linear model to display.
number     The number of bacterial features to pick out.
taxa       Taxa list.
uniqueNames Number the various taxa.
adjustMethod Method to adjust p-values by. Default is "FDR". Options include "holm",
"hochberg", "hommel", "bonferroni", "BH", "BY", "fdr", "none". See p.adjust
for more details.
group      One of five choices: 0,1,2,3,4. 0: the sort is ordered by a decreasing absolute
value coefficient fit. 1: the sort is ordered by the raw coefficient fit in decreasing
order. 2: the sort is ordered by the raw coefficient fit in increasing order. 3:
the sort is ordered by the p-value of the coefficient fit in increasing order. 4: no
sorting.
eff        Filter features to have at least a "eff" quantile or number of effective samples.
numberEff  Boolean, whether eff should represent quantile (default/FALSE) or number.
counts     Filter features to those with at least 'counts' counts.
file       Name of output file, including location, to save the table.

Value

Table of the top-ranked features determined by the linear fit's coefficient.

MRihw, fitFeatureModelResults-method

Description

Function used in MRcoefs() when "IHW" is set as the p value adjustment method

Usage

MRihw(obj, ...)

Arguments

obj Either a fitFeatureModelResults or fitZigResults object
...
other parameters

MRihw, fitFeatureModelResults-method

Description

Function used in MRcoefs() when "IHW" is set as the p value adjustment method

Usage

## S4 method for signature 'fitFeatureModelResults'
MRihw(obj, p, adjustMethod, alpha)

Arguments

obj Either a fitFeatureModelResults or fitZigResults object
p a vector of pvalues extracted from obj
adjustMethod Value specifying which adjustment method and which covariate to use for IHW pvalue adjustment. For obj of class fitFeatureModelResults-class, options are "ihw-abundance" (median feature count per row) and "ihw-ubiquity" (number of non-zero features per row). For obj of class fitZigResults-class, options are "ihw-abundance" (weighted mean per feature) and "ihw-ubiquity" (number of non-zero features per row).
alpha pvalue significance level specified for IHW call. Default is 0.1
MRihw, fitZigResults-method

MRihw runs IHW within a MRcoefs() call

Description

Function used in MRcoefs() when "IHW" is set as the p value adjustment method

Usage

## S4 method for signature 'fitZigResults'
MRihw(obj, p, adjustMethod, alpha)

Arguments

obj Either a fitFeatureModelResults or fitZigResults object
p a vector of pvalues extracted from obj
adjustMethod Value specifying which adjustment method and which covariate to use for IHW pvalue adjustment. For obj of class fitFeatureModelResults-class, options are "ihw-abundance" (median feature count per row) and "ihw-ubiquity" (number of non-zero features per row). For obj of class fitZigResults-class, options are "ihw-abundance" (weighted mean per feature) and "ihw-ubiquity" (number of non-zero features per row).
alpha pvalue significance level specified for IHW call. Default is 0.1

MRtable Table of top microbial marker gene from linear model fit including sequence information

Description

Extract a table of the top-ranked features from a linear model fit. This function will be updated soon to provide better flexibility similar to limma's topTable. This function differs from link{MRcoefs} in that it provides other information about the presence or absence of features to help ensure significant features called are moderately present.

Usage

description
Create a MRexperiment object

Description
This function creates a MRexperiment object from a matrix or data frame of count data.

Usage
newMRexperiment(
counts,
phenoData = NULL,
featureData = NULL,
libSize = NULL,
normFactors = NULL
)

Arguments
counts A matrix or data frame of count data. The count data is representative of the number of reads annotated for a feature (be it gene, OTU, species, etc). Rows should correspond to features and columns to samples.
phenoData An AnnotatedDataFrame with pertinent sample information.
featureData An AnnotatedDataFrame with pertinent feature information.
libSize libSize, library size, is the total number of reads for a particular sample.
normFactors normFactors, the normalization factors used in either the model or as scaling factors of sample counts for each particular sample.

Details
See MRexperiment-class and eSet (from the Biobase package) for the meaning of the various slots.

Value
an object of class MRexperiment
normFactors

Author(s)

Joseph N. Paulson

Examples

cnts = matrix(abs(rnorm(1000)),nc=10)
obj <- newMRexperiment(cnts)

| normFactors | Access the normalization factors in a MRexperiment object |

Description

Function to access the scaling factors, aka the normalization factors, of samples in a MRexperiment object.

Usage

normFactors(object)

Arguments

object a MRexperiment object

Value

Normalization scaling factors

Author(s)

Joseph N. Paulson

Examples

data(lungData)
head(normFactors(lungData))
Description

Function to replace the scaling factors, aka the normalization factors, of samples in a MRexperiment object.

Usage

```r
## S4 replacement method for signature 'MRexperiment,numeric'
normFactors(object) <- value
```

Arguments

- `object`: a MRexperiment object
- `value`: vector of normalization scaling factors

Value

Normalization scaling factors

Author(s)

Joseph N. Paulson

Examples

```r
data(lungData)
head(normFactors(lungData) <- rnorm(1))
```

Description

This function plots takes two vectors, calculates the contingency table and plots circles sized by the contingency table value. Optional significance vectors of the values significant will shade the circles by proportion of significance.
Usage

plotBubble(
    yvector,
    xvector,
    sigvector = NULL,
    nbreaks = 10,
    ybreak = quantile(yvector, p = seq(0, 1, length.out = nbreaks)),
    xbreak = quantile(xvector, p = seq(0, 1, length.out = nbreaks)),
    scale = 1,
    local = FALSE,
    ...
)

Arguments

yvector          A vector of values represented along y-axis.
xvector          A vector of values represented along x-axis.
sigvector        A vector of the names of significant features (names should match x/yvector).
nbreaks           Number of bins to break yvector and xvector into.
ybreak            The values to break the yvector at.
xbreak            The values to break the xvector at.
scale             Scaling of circle bin sizes.
local             Boolean to shade by significant bin numbers (TRUE) or overall proportion (FALSE).
...                Additional plot arguments.

Value

A matrix of features along rows, and the group membership along columns.

See Also

plotMRheatmap

Examples

data(mouseData)
mouseData = mouseData[which(rowSums(mouseData)>139),]
sparsity = rowMeans(MRcounts(mouseData)==0)
lor = log(fitPA(mouseData,cl=pData(mouseData)[,3]$oddsRatio)
plotBubble(lor,sparsity,main="lor ~ sparsity")
# Example 2
x = runif(100000)
y = runif(100000)
plotBubble(y,x)
plotClassTimeSeries  Plot abundances by class

Description

Plot the abundance of values for each class using a spline approach on the estimated full model.

Usage

plotClassTimeSeries(
  res,
  formula,
  xlab = "Time",
  ylab = "Abundance",
  color0 = "black",
  color1 = "red",
  include = c("1", "class", "time:class"),
  ...
)

Arguments

res  Output of fitTimeSeries function
formula  Formula for ssanova. Of the form: abundance ~ ... where ... includes any pData slot value.
xlab  X-label.
ylab  Y-label.
color0  Color of samples from first group.
color1  Color of samples from second group.
include  Parameters to include in prediction.
...  Extra plotting arguments.

Value

Plot for abundances of each class using a spline approach on estimated null model.

See Also

fitTimeSeries

Examples

data(mouseData)
res = fitTimeSeries(obj=mouseData,feature="Actinobacteria", class="status",id="mouseID",time="relativeTime",lvl='class',B=10)
plotClassTimeSeries(res,pch=21,bg=res$data$class,ylim=c(0,8))
### plotCorr

**Basic correlation plot function for normalized or unnormalized counts.**

### Description

This function plots a heatmap of the "n" features with greatest variance across rows.

### Usage

```r
plotCorr(obj, n, norm = TRUE, log = TRUE, fun = cor, ...)
```

### Arguments

- `obj`: A MRexperiment object with count data.
- `n`: The number of features to plot. This chooses the "n" features with greatest variance.
- `norm`: Whether or not to normalize the counts - if MRexperiment object.
- `log`: Whether or not to log2 transform the counts - if MRexperiment object.
- `fun`: Function to calculate pair-wise relationships. Default is pearson correlation
- `...`: Additional plot arguments.

### Value

`plotCorr` returns a plotted correlation matrix.

### See Also

- `cumNormMat`

### Examples

```r
data(mouseData)
plotCorr(obj=mouseData,n=200,cexRow = 0.4,cexCol = 0.4,trace="none",dendrogram="none",
        col = colorRampPalette(brewer.pal(9, "RdBu"))(50))
```
plotFeature

Basic plot function of the raw or normalized data.

Description

This function plots the abundance of a particular OTU by class. The function is the typical manhattan plot of the abundances.

Usage

plotFeature(
  obj, 
  otuIndex, 
  classIndex, 
  col = "black", 
  sort = TRUE, 
  sortby = NULL, 
  norm = TRUE, 
  log = TRUE, 
  sl = 1000, 
  ...
)

Arguments

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>obj</td>
<td>A MRexperiment object with count data.</td>
</tr>
<tr>
<td>otuIndex</td>
<td>The row to plot</td>

<td>Whether or not to log2 transform the counts - if MRexperiment object.</td>
</tr>
<tr>
<td>sl</td>
<td>Scaling factor - if MRexperiment and norm=TRUE.</td>
</tr>
<tr>
<td>...</td>
<td>Additional plot arguments.</td>
</tr>
</tbody>
</table>

Value

counts and classindex

See Also

cumNorm
Examples

data(mouseData)
classIndex=list(Western=which(pData(mouseData)$diet=="Western"))
classIndex$BK=which(pData(mouseData)$diet=="BK")

par(mfrow=c(2,1))
dates = pData(mouseData)$date
plotFeature(mouseData,norm=FALSE,log=FALSE,otuIndex,classIndex,
col=dates,sortby=dates,ylab="Raw reads")

plotGenus

Basic plot function of the raw or normalized data.

Description

This function plots the abundance of a particular OTU by class. The function uses the estimated posterior probabilities to make technical zeros transparent.

Usage

plotGenus(
  obj,
  otuIndex,
  classIndex,
  norm = TRUE,
  log = TRUE,
  no = 1:length(otuIndex),
  labs = TRUE,
  xlab = NULL,
  ylab = NULL,
  jitter = TRUE,
  jitter.factor = 1,
  pch = 21,
  ...
)

Arguments

obj An MRexperiment object with count data.

twuIndex A list of the otus with the same annotation.
classIndex A list of the samples in their respective groups.
norm Whether or not to normalize the counts - if MRexperiment object.
log Whether or not to log2 transform the counts - if MRexperiment object.
no Which of the otuIndex to plot.
### plotMRheatmap

**Description**

This function plots a heatmap of the 'n' features with greatest variance across rows (or other statistic).

**Usage**

```r
plotMRheatmap(obj, n, norm = TRUE, log = TRUE, fun = sd, ...)
```

**Arguments**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>obj</code></td>
<td>A MRexperiment object with count data.</td>
</tr>
<tr>
<td><code>n</code></td>
<td>The number of features to plot. This chooses the 'n' features of greatest positive statistic.</td>
</tr>
<tr>
<td><code>norm</code></td>
<td>Whether or not to normalize the counts - if MRexperiment object.</td>
</tr>
<tr>
<td><code>log</code></td>
<td>Whether or not to log2 transform the counts - if MRexperiment object.</td>
</tr>
<tr>
<td><code>fun</code></td>
<td>Function to select top 'n' features.</td>
</tr>
<tr>
<td><code>...</code></td>
<td>Additional plot arguments.</td>
</tr>
</tbody>
</table>
plotOrd

Plot of either PCA or MDS coordinates for the distances of normalized or unnormalized counts.

Description

This function plots the PCA / MDS coordinates for the "n" features of interest. Potentially uncovering batch effects or feature relationships.

Usage

plotOrd(
  obj,
  tran = TRUE,
  comp = 1:2,
  norm = TRUE,
  log = TRUE,
  usePCA = TRUE,
  useDist = FALSE,
  distfun = stats::dist,
  dist.method = "euclidian",
  n = NULL,
  ...
)

Examples

data(mouseData)
trials = pData(mouseData)$diet
heatmapColColors=brewer.pal(12,"Set3")[as.integer(factor(trials))];
heatmapCols = colorRampPalette(brewer.pal(9, "RdBu"))(50)
#### version using sd
plotMRheatmap(obj=mouseData,n=200,cexRow = 0.4,cexCol = 0.4,trace="none",
               col = heatmapCols,ColSideColors = heatmapColColors)
#### version using MAD
plotMRheatmap(obj=mouseData,n=50,fun=mad,cexRow = 0.4,cexCol = 0.4,trace="none",
               col = heatmapCols,ColSideColors = heatmapColColors)

Value

plotted matrix

See Also

cumNormMat
### Arguments

- **obj**
  - A MRexperiment object or count matrix.

- **tran**
  - Transpose the matrix.

- **comp**
  - Which components to display

- **norm**
  - Whether or not to normalize the counts - if MRexperiment object.

- **log**
  - Whether or not to log2 the counts - if MRexperiment object.

- **usePCA**
  - TRUE/FALSE whether to use PCA or MDS coordinates (TRUE is PCA).

- **useDist**
  - TRUE/FALSE whether to calculate distances.

- **distfun**
  - Distance function, default is stats::dist

- **dist.method**
  - If useDist==TRUE, what method to calculate distances.

- **n**
  - Number of features to make use of in calculating your distances.

- **...**
  - Additional plot arguments.

### Value

- coordinates

### See Also

- *cumNormMat*

### Examples

```r
data(mouseData)
c1 = pData(mouseData)[,3] plotOTU(mouseData, tran=TRUE, useDist=TRUE, pch=21, bg=factor(c1), usePCA=FALSE)
```

---

**plotOTU**  
*Basic plot function of the raw or normalized data.*

### Description

This function plots the abundance of a particular OTU by class. The function uses the estimated posterior probabilities to make technical zeros transparent.

### Usage

```r
plotOTU(
  obj,
  otu,
  classIndex,
  log = TRUE,
  norm = TRUE,
)```
plotOTU

jitter.factor = 1,
pch = 21,
labs = TRUE,
xlab = NULL,
ylab = NULL,
jitter = TRUE,
...
)

Arguments

obj A MRexperiment object with count data.

otu The row number/OTU to plot.

classIndex A list of the samples in their respective groups.

log Whether or not to log2 transform the counts - if MRexperiment object.

norm Whether or not to normalize the counts - if MRexperiment object.

jitter.factor Factor value for jitter.

pch Standard pch value for the plot command.

labs Whether to include group labels or not. (TRUE/FALSE)

xlab xlabel for the plot.

ylab ylabel for the plot.

jitter Boolean to jitter the count data or not.

Value

Plotted values

See Also

cumNorm

Examples

data(mouseData)
classIndex=list(controls=which(pData(mouseData)$diet=="BK"))
classIndex$cases=which(pData(mouseData)$diet=="Western")
# you can specify whether or not to normalize, and to what level
plotOTU(mouseData,otu=9083,classIndex,norm=FALSE,main="9083 feature abundances")
Description

This function plots the number of observed features vs. the depth of coverage.

Usage

plotRare(obj, cl = NULL, ...)

Arguments

obj A MRexperiment object with count data or matrix.
cl Vector of classes for various samples.
... Additional plot arguments.

Value

Library size and number of detected features

See Also

plotOrd, plotMRheatmap, plotCorr, plotOTU, plotGenus

Examples

data(mouseData)
c1 = factor(pData(mouseData)[,3])
res = plotRare(mouseData,cl=c1,pch=21,bg=c1)
tmp=lapply(levels(cl), function(lv) lm(res[,”ident”]-res[,”libSize”]-1, subset=cl==lv))
for(i in 1:length(levels(cl))){
  abline(tmp[[i]], col=i)
}
legend(“topleft”, c(“Diet 1”, “Diet 2”), text.col=c(1,2), box.col=NA)
plotTimeSeries

Plot difference function for particular bacteria

Description

Plot the difference in abundance for significant features.

Usage

plotTimeSeries(
  res,
  C = 0,
  xlab = "Time",
  ylab = "Difference in abundance",
  main = "SS difference function prediction",
  ...
)

Arguments

res Output of fitTimeSeries function
C Value for which difference function has to be larger or smaller than (default 0).

xlab X-label.
ylab Y-label.
main Main label.

... Extra plotting arguments.

Value

Plot of difference in abundance for significant features.

See Also

fitTimeSeries

Examples

data(mouseData)
res = fitTimeSeries(obj=mouseData,feature="Actinobacteria",
  class="status",id="mouseID",time="relativeTime",lvl='class',B=10)
plotTimeSeries(res)
posteriorProbs

Access the posterior probabilities that results from analysis

Description

Accessing the posterior probabilities following a run through `fitZig`

Usage

`posteriorProbs(obj)`

Arguments

`obj` a `MRexperiment` object.

Value

Matrix of posterior probabilities

Author(s)

Joseph N. Paulson

Examples

```r
# This is a simple demonstration
data(lungData)
k = grep("Extraction.Control",pData(lungData)$SampleType)
lungTrim = lungData[-k]
k = which(rowSums(MRcounts(lungTrim)>0)<30)
lungTrim = cumNorm(lungTrim)
lungTrim = lungTrim[-k,]
smokingStatus = pData(lungTrim)$SmokingStatus
mod = model.matrix(~smokingStatus)
# The maxit is not meant to be 1 -- this is for demonstration/speed
settings = zigControl(maxit=1,verbose=FALSE)
fit = fitZig(obj = lungTrim,mod=mod,control=settings)
head(posteriorProbs(lungTrim))
```
returnAppropriateObj  
*Check if MRexperiment or matrix and return matrix*

**Description**

Function to check if object is a MRexperiment class or matrix

**Usage**

```r
returnAppropriateObj(obj, norm, log, sl = 1000)
```

**Arguments**

- `obj`  a MRexperiment or matrix object
- `norm`  return a normalized MRexperiment matrix
- `log`  return a log transformed MRexperiment matrix
- `sl`  scaling value

**Value**

Matrix

**Examples**

```r
data(lungData)
head(returnAppropriateObj(lungData, norm=FALSE, log=FALSE))
```

---

**ssFit**  
*smoothing-splines anova fit*

**Description**

Sets up a data-frame with the feature abundance, class information, time points, sample ids and returns the fitted values for the fitted model.

**Usage**

```r
ssFit(
    formula,
    abundance,
    class,
    time,
    id,
    include = c("class", "time:class"),
    pd,
    ...
)
```
ssIntervalCandidate

Arguments

formula  Formula for ssanova. Of the form: abundance ~ ... where ... includes any pData slot value.
abundance Numeric vector of abundances.
class    Class membership (factor of group membership).
time     Time point vector of relative times (same length as abundance).
id       Sample / patient id.
include  Parameters to include in prediction.
pd       Extra variable.
...      Extra parameters for ssanova function (see ?ssanova).

Value

A list containing:

data : Inputed data
  • fit : The interpolated / fitted values for timePoints
  • se : The standard error for CI intervals
  • timePoints : The time points interpolated over

See Also

cumNorm fitTimeSeries ssPermAnalysis ssPerm ssIntervalCandidate

Examples

# Not run

ssIntervalCandidate  calculate interesting time intervals

Description

Calculates time intervals of interest using SS-Anova fitted confidence intervals.

Usage

ssIntervalCandidate(fit, standardError, timePoints, positive = TRUE, C = 0)
Arguments

- fit: SS-Anova fits.
- standardError: SS-Anova se estimates.
- timePoints: Time points interpolated over.
- positive: Positive region or negative region (difference in abundance is positive/negative).
- C: Value for which difference function has to be larger or smaller than (default 0).

Value

Matrix of time point intervals of interest

See Also

cumNorm, fitTimeSeries, ssFit, ssPerm, ssPermAnalysis

Examples

# Not run

ssPerm (class permutations for smoothing-spline time series analysis)

Description

Creates a list of permuted class memberships for the time series permutation tests.

Usage

ssPerm(df, B)

Arguments

- df: Data frame containing class membership and sample/patient id label.
- B: Number of permutations.

Value

A list of permuted class memberships

See Also

cumNorm, fitTimeSeries, ssFit, ssPermAnalysis, ssIntervalCandidate

Examples

# Not run
ssPermAnalysis

---

**smoothing-splines anova fits for each permutation**

**Description**

Calculates the fit for each permutation and estimates the area under the null (permuted) model for interesting time intervals of differential abundance.

**Usage**

```r
ssPermAnalysis(
  data, 
  formula, 
  permList, 
  intTimes, 
  timePoints, 
  include = c("class", "time:class"),
  ...
)
```

**Arguments**

- `data` Data used in estimation.
- `formula` Formula for ssanova. Of the form: `abundance ~ ...` where `...` includes any pData slot value.
- `permList` A list of permuted class memberships
- `intTimes` Interesting time intervals.
- `timePoints` Time points to interpolate over.
- `include` Parameters to include in prediction.
- `...` Options for ssanova

**Value**

A matrix of permuted area estimates for time intervals of interest.

**See Also**

- `cumNorm`
- `fitTimeSeries`
- `ssFit`
- `ssPerm`
- `ssIntervalCandidate`

**Examples**

```r
# Not run
```
Description

Compute the area of a function with values 'y' at the points 'x'. Function comes from the pracma package.

Usage

trapz(x, y)

Arguments

x  x-coordinates of points on the x-axis
y  y-coordinates of function values

Value

Approximated integral of the function from 'min(x)' to 'max(x)'. Or a matrix of the same size as 'y'.

Examples

# Calculate the area under the sine curve from 0 to pi:
  n <- 101
  x <- seq(0, pi, len = n)
  y <- sin(x)
  trapz(x, y)  #=> 1.999835504

# Use a correction term at the boundary: -h^2/12*(f'(b)-f'(a))
  h <- x[2] - x[1]
  ca <- (y[2]-y[1]) / h
  cb <- (y[n]-y[n-1]) / h
  trapz(x, y) - h^2/12 * (cb - ca)  #=> 1.999999969

---

---

With a list of fitTimeSeries results, generate an MRexperiment that can be plotted with metavizr

Description

With a list of fitTimeSeries results, generate an MRexperiment that can be plotted with metavizr
Usage

```
ts2MReperiment(
  obj,
  sampleNames = NULL,
  sampleDescription = "timepoints",
  taxonomyLevels = NULL,
  taxonomyHierarchyRoot = "bacteria",
  taxonomyDescription = "taxonomy",
  featuresOfInterest = NULL,
  featureDataOfInterest = NULL
)
```

Arguments

- **obj**: Output of `fitMultipleTimeSeries`
- **sampleNames**: Sample names for plot
- **sampleDescription**: Description of samples for plot axis label
- **taxonomyLevels**: Feature names for plot
- **taxonomyHierarchyRoot**: Root of feature hierarchy for MReperiment
- **taxonomyDescription**: Description of features for plot axis label
- **featuresOfInterest**: The features to select from the `fitMultipleTimeSeries` output
- **featureDataOfInterest**: featureData for the resulting MReperiment

Value

MReperiment that contains fitTimeSeries data, featureData, and phenoData

See Also

- `fitTimeSeries`
- `fitMultipleTimeSeries`

Examples

```
data(mouseData)
res = fitMultipleTimeSeries(obj=mouseData,lvl='phylum',class="status",
                          id="mouseID",time="relativeTime",B=1)
obj = ts2MReperiment(res)
obj
```
Table of features unique to a group

Description

Creates a table of features, their index, number of positive samples in a group, and the number of reads in a group. Can threshold features by a minimum no. of reads or no. of samples.

Usage

uniqueFeatures(obj, cl, nsamples = 0, nreads = 0)

Arguments

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>obj</td>
<td>Either a MRexperiment object or matrix.</td>
</tr>
<tr>
<td>cl</td>
<td>A vector representing assigning samples to a group.</td>
</tr>
<tr>
<td>nsamples</td>
<td>The minimum number of positive samples.</td>
</tr>
<tr>
<td>nreads</td>
<td>The minimum number of raw reads.</td>
</tr>
</tbody>
</table>

Value

Table of features unique to a group

Examples

```r
data(mouseData)
head(uniqueFeatures(mouseData[1:100,], cl=pData(mouseData)[,3]))
```

Computes normalization factors using wrench instead of cumNorm

Description

Calculates normalization factors using method published by M. Sentil Kumar et al. (2018) to compute normalization factors which considers compositional bias introduced by sequencers.

Usage

wrenchNorm(obj, condition)

Arguments

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>obj</td>
<td>an MRexperiment object</td>
</tr>
<tr>
<td>condition</td>
<td>case control label that wrench uses to calculate normalization factors</td>
</tr>
</tbody>
</table>
Value
an MRexperiment object with updated normalization factors. Accessible by normFactors.

See Also
cumNorm fitZig

Examples
data(mouseData)
mouseData <- wrenchNorm(mouseData, condition = mouseData$diet)
head(normFactors(mouseData))

zigControl Settings for the fitZig function

Description
Settings for the fitZig function

Usage
zigControl(
  tol = 1e-04,
  maxit = 10,
  verbose = TRUE,
  dfMethod = "modified",
  pvalMethod = "default"
)

Arguments
tol The tolerance for the difference in negative log likelihood estimates for a feature to remain active.
maxit The maximum number of iterations for the expectation-maximization algorithm.
verbose Whether to display iterative step summary statistics or not.
dfMethod Either 'default' or 'modified' (by responsibilities).
pvalMethod Either 'default' or 'bootstrap'.

Value
The value for the tolerance, maximum no. of iterations, and the verbose warning.

Note
fitZig makes use of zigControl.
See Also

fitZig cumNorm plotOTU

Examples

control = zigControl(tol=1e-10,maxit=10,verbose=FALSE)
