`.getWorkspaceTable` *Obtain the table of datasets from the Terra platform*

Description

The datasets include all TCGA datasets that do not come from the Genomic Data Commons Data Repository because those data use a different data model.

Usage

```
.getWorkspaceTable(project = "^TCGA", cancerCode = ".*")
```

Arguments

`project`	character(1) A prefix for the regex search across all public projects on the terra platform (default: ‘"^TCGA"‘). Usually, this does not change.
`cancerCode`	character(1) Corresponds to the TCGA cancer code (e.g, "ACC" for AdrenoCortical Carcinoma) of interest. The default value of (‘.*‘) provides all available cancer datasets.

Value

A ‘tibble‘ ‘data.frame‘ that match the project in put; by default, TCGA workspaces.

`terraTCGAworkspace` *Obtain or set the Terra Workspace Project Dataset*

Description

Terra allows access to about 71 open access TCGA datasets. A dataset workspace can be set using the `terraTCGAworkspace` function with a `projectName` input. Use the `selectTCGAworkspace` function to select a TCGA data workspace from an interactive table.

Usage

```
terraTCGAworkspace(projectName = getOption("terraTCGAdata.workspace", NULL))

selectTCGAworkspace(
  projectName = getOption("terraTCGAdata.workspace", NULL),
  verbose = FALSE,
  ...
)
```

Arguments

`projectName`	character(1) A project code usually in the form of `TCGA_CODE_OpenAccess_V1-0_DATA`. See `selectTCGAworkspace` to interactively select from a table of project codes.
`verbose`	logical(1) Whether to provide more informative messages when an the "terraTCGAdata.workspace" option is set.
`...`	further arguments passed down to lower level functions, not intended for the end user.

Details

Note that GDC workspaces are not supported and are excluded from the search results. GDC workspaces use a Terra workflow to download TCGA data rather than providing Google Bucket storage locations for easy data retrieval. To reset the `terraTCGAworkspace`, use `terraTCGAworkspace(NULL)` and you will be prompted to select from a list of TCGA workspaces. You may also check the current active workspace by running `terraTCGAworkspace()` without any inputs.

Value

A Terra TCGA Workspace name

Functions

- `selectTCGAworkspace()`: Function to interactively select from the available TCGA data workspaces in Terra. The ‘projectName‘ argument and ’terraTCGAdata.workspace’ option must be ‘NULL‘ to enable the interactive gadget.

Examples

```
if (
    AnVILGCP::gcloud_exists() &&
    identical(AnVILBase::avplatform_namespace(), "AnVILGCP") &&
    nzchar(AnVILGCP::avworkspace_name())
) {
  selectTCGAworkspace()
  terraTCGAworkspace()
}
```
