Package ‘AnVILPublish’

May 2, 2024

Title        Publish Packages and Other Resources to AnVIL Workspaces
Version      1.14.0
Description  Use this package to create or update AnVIL workspaces from
resources such as R / Bioconductor packages. The metadata about
the package (e.g., select information from the package DESCRIPTION
file and from vignette YAML headings) are used to populate the
‘DASHBOARD’. Vignettes are translated to python notebooks ready
for evaluation in AnVIL.
License      Artistic-2.0
Imports      AnVIL, BiocBaseUtils, BiocManager, httr, jsonlite, rmarkdown,
yaml, readr, whisker, tools, utils, stats
Suggests     knitr, BiocStyle, testthat (>= 3.0.0)
biocViews    Infrastructure, Software
Encoding     UTF-8
Roxygen      list(markdown = TRUE)
RoxygenNote  7.2.3
VignetteBuilder knitr
Config/testthat/edition  3
git_url      https://git.bioconductor.org/packages/AnVILPublish
git_branch  RELEASE_3_19
git_last_commit  5012b42
git_last_commit_date  2024-04-30
Repository   Bioconductor 3.19
Date/Publication  2024-05-02
Author       Marcel Ramos [aut, cre] (<https://orcid.org/0000-0002-3242-0582>),

add_access

Add Bioconductor_User group to workspace access

Description

add_access() adds the Bioconductor_User group to a workspace with READER permissions. Users gain access to the workspace (and others) by being added to the Bioconductor_User group.

Usage

add_access(namespace, name)

Arguments

namespace character(1) namespace (billing account) under which the workspace belongs.
name character(1) name of the workspace to add access credentials.

Value

add_access() returns TRUE, invisibly.

as_notebook

Render vignettes as .ipynb notebooks

Description

as_notebook() renders Rmarkdown (.Rmd) or Quarto (.Qmd) vignettes as Jupyter (.ipynb) notebooks. The vignettes and notebooks are updated in an AnVIL workspace.

Usage

as_notebook(
  rmd_paths,
  namespace,
  name,
  update = FALSE,
  type = c("ipynb", "rmd", "both"),
  quarto = c("render", "convert")
)
as_workspaces

Arguments

- **rmd_paths**: character() paths to Rmd or Qmd files.
- **namespace**: character(1) AnVIL namespace (billing project) to be used.
- **name**: character(1) AnVIL workspace name.
- **update**: logical(1) Update (over-write any similarly named notebooks) an existing workspace? The default (FALSE) creates notebooks locally, e.g., for previewing via jupyter notebook *ipynb.
- **type**: character(1) The type of notebook to be copied to the workspace. Must be one of ipynb, rmd, or both. ipynb copies only the Jupyter notebook. rmd copies Rmarkdown and Quarto vignettes. both copies both notebooks and vignettes.
- **quarto**: character(1) If the program Quarto is installed, this parameter indicates whether the .Rmd files will be rendered or converted. See vignette for more details.

Details

See the vignette "Publishing R / Bioconductor Packages To AnVIL Workspaces" for details on the conversion process; best results are obtained when Quarto software is available.

Value

as_notebook() returns the paths to the local (if update = FALSE) or the workspace notebooks.

as_workspaces

Render R packages as AnVIL workspaces

Description

as_workspaces() renders a package source tree (e.g., from a git checkout) as an AnVIL workspace.

Usage

as_workspaces(
    path,
    namespace,
    name = NULL,
    create = FALSE,
    update = FALSE,
    use_readme = FALSE,
    type = c("ipynb", "rmd", "both"),
    quarto = c("render", "convert")
)

Arguments

path character(1) path to the location of the package source code.
namespace character(1) AnVIL namespace (billing project) to be used.
name character(1) AnVIL workspace name.
create logical(1) Create a new project?
update logical(1) Update (over-write the existing DASHBOARD and any similarly named notebooks) an existing workspace? If neither create nor update is TRUE, the code to create a workspace is run but no output generated; this can be useful during debugging.
use_readme logical(1) Defaults to FALSE; if TRUE the content of README.md in package top-level folder is used with the package DESCRIPTION version and provenance metadata for rendering in the workspace 'DASHBOARD'.
type character(1) The type of notebook to be copied to the workspace. Must be one of ipynb, rmd, or both. ipynb copies only the Jupyter notebook. rmd copies Rmarkdown and Quarto vignettes. both copies both notebooks and vignettes.
quarto character(1) If the program Quarto is installed, this parameter indicates whether the .Rmd files will be rendered or converted. See vignette for more details.

Details

Information from the DESCRIPTION file and Rmd YAML are used to populate the 'DASHBOARD' tab. See ?as_notebook() for details on how vignettes are processed to notebooks.

Value

as_workspace() returns the URL of the updated workspace, invisibly.
