Package ‘Pviz’

May 3, 2024

Type Package
Title Peptide Annotation and Data Visualization using Gviz
Version 1.38.0
Author Renan Sauteraud, Mike Jiang, Raphael Gottardo
Maintainer Renan Sauteraud <rsautera@fhcrc.org>
Description Pviz adapts the Gviz package for protein sequences and data.
License Artistic-2.0
Depends R(>= 3.0.0), Gviz(>= 1.7.10)
Imports biovizBase, Biostrings, GenomicRanges, IRanges, data.table, methods
Suggests knitr, pepDat
biocViews Visualization, Proteomics, Microarray
VignetteBuilder knitr
git_url https://git.bioconductor.org/packages/Pviz
git_branch RELEASE_3_19
git_last_commit 66b3eba
git_last_commit_date 2024-04-30
Repository Bioconductor 3.19
Date/Publication 2024-05-02

Index 10
ATrack

**ATrack class**

**Description**

This class contains Gviz’s AnnotationTrack and adds default values to the genome and chromosome slot.

**Usage**

```r
ATrack(range = NULL, start = NULL, end = NULL, width = NULL, group, id, 
   stacking = "squish", name = "ATrack", fun, selectFun, ...)
```

**Arguments**

- `range`, `start`, `end`, `width`, `group`, `id`, `stacking`, `name`, `fun`, `selectFun`, ...
  - Arguments to be passed to `AnnotationTrack`.

**Author(s)**

Renan Sauteraud

**See Also**

`AnnotationTrack`, `GdObject`

**Examples**

```r
# Object construction
aTrack <- ATrack(start = c(20, 60), end = c(40, 100), name = "random.anno", 
id=c("small","big"))
# Stacking example
a2Track <- ATrack(start = c(20, 30), end = c(40, 100), name = "stacking=dense", 
id=c("small","big"), stacking = "dense", fill=c("black","orange"))
a3Track <- ATrack(start = c(20, 30), end = c(40, 100), name = "no stacking", 
id=c("small","big"), fill=c("black","orange"))
# Plotting
plotTracks(trackList = c(aTrack, a2Track, a3Track), showFeatureId = TRUE)
```
CladeTrack

Description

This track can be used to display the result of pepStat analysis for a single clade. It contains DTrack.

Usage

CladeTrack(restab, clade, name = clade, ...)

Arguments

restab  A data.frame. The result of a peptide microarray analysis, as returned by pepStat's restab function.
clade  A character. The clade to plot.
name  A character. The name of the track, used in the title panel when plotting. By default, the clade name.
...  Additional argument to be passed to DataTrack. They will be treated as display parameters.

Slots

clade  A character. The clade to display.

Author(s)

Renan Sauteraud

See Also

DTrack

Examples

if(require(pepDat)){
data(restab)
  ct <- CladeTrack(restab, clade = "M", type = "l", legend = TRUE)
  plotTracks(ct)
}
DTrack

Description
This class contains Gviz’s DataTrack and adds default values to the genome and chromosome slot.

Usage
DTrack(range = NULL, start = NULL, end = NULL, width = NULL, data,
name = "DTrack", ...)

Arguments
range, start, end, width, data, name, ...
Arguments to be passed to DataTrack.

Details
Refer to DataTrack for details regarding the constructor.

Author(s)
Renan Sauteraud

See Also
DataTrack, GdObject

Examples

dTrack <- DTrack(start=seq(1,1000, len=100), width=10, data=matrix(runif(400),
nrow=4), name="random data")

plot_clade

Description
Plot frequency of response for a single clade.

Usage
plot_clade(restab, clade, sequence = NULL, from = 0,
to = max(restab$position), ...)
plot_inter

Arguments

restab A data.frame. The result of a peptide microarray analysis, as returned by pepStat's restab function.
clade A character. The clade to plot.
sequence An optional character or AAString. The sequence of the ProteinSequenceTrack to plot. It should be the sequence of the reference genome used in the peptideSet that generated the restab.
from A numeric, the start coordinate of the plot.
to A numeric, the end coordinate of the plot.
... Additional arguments to be passed to plotTracks.

Author(s)

Renan Sauteraud

See Also

restab, plot_inter, plotTracks

Examples

if(require(pepDat)){
  data(restab)
  plot_clade(restab, clade = c("A", "M"))
}

plot_inter

Plot frequency of response for each group

Description

Plot an axis and the frequency of response of each group, averaged by peptides at each position.

Usage

plot_inter(restab, sequence = NULL, from = 0, to = max(restab$position),
...)

Arguments

restab A data.frame. The result of a peptide microarray analysis, as returned by pepStat's restab function.
sequence A character or an AAString. If not NULL, the sequence of the ProteinSequenceTrack to plot. It should be the sequence of the reference genome used in the peptideSet that generated the restab.
from A numeric, the start coordinate of the plot.
to A numeric, the end coordinate of the plot.
... Additional arguments to be passed to plotTracks.
Author(s)
Renan Sauteraud

See Also
restab, plot_clade, plotTracks

Examples
if(require(pepDat)){
  data(restab_aggregate)
  plot_inter(restab_aggregate)
}

Description
This track can be used to display the frequency of antibody binding for each probe on an array as predicted by pepStat's function makeCalls.

Usage
ProbeTrack(sequence, intensity, probeStart, restab = NULL, group = NULL,
  name = "ProbeTrack", ...)

Arguments
sequence A character vector. The sequence of peptides to display.
intensity A numeric vector. The frequency of binding or the baseline corrected intensity for the peptides.
probeStart A numeric vector. The start position of the peptides.
name A character. The name of the track used in the title panel when plotting
restab A data.frame containing all the above parameters, as outputted by pepStat's restab function.
group A character. The group to display on the ProbeTrack. This is only required when restab is not NULL. See details section for more information.
... Arguments to be passed to DataTrack.

Details
The vectors for the arguments sequence, freq and probeStart should be of the same length. If restab is provided, the three previous arguments will be ignored and group must be specified. group must be a valid column name in restab, data.frame.
ProteinAxisTrack

Slots

sequence  A character vector. The probes sequence.
probeStart  A numeric vector. The start position of the probes.
intensity  A numeric vector. The frequency of response of each probe. Or the baseline corrected intensity of the signal.

GdObject
restab

Examples

if(require(pepDat)){
data(restab)
pt <- ProbeTrack(sequence = restab$peptide,
                  intensity = restab$group2,
                  probeStart = restab$start)
plotTracks(pt)
plotTracks(pt, from = 460, to = 560, legend=TRUE)
}

ProteinAxisTrack

Description

A track to display an axis for protein or peptide sequences

Usage

ProteinAxisTrack(range = NULL, name = "Axis", addNC = FALSE, id = NULL,
                  ...

Arguments

range, name, id, ...
Arguments to be passed to GenomeAxisTrack.
addNC  A logical. If TRUE, display the Amino-terminal and Carboxyl-terminal ends on the axis.

Author(s)

Renan Sauteraud
ProteinSequenceTrack

See Also
GeneAxisTrack

Examples

```r
# Object construction
paxTrack <- ProteinAxisTrack()
pax2 <- ProteinAxisTrack(addNC=TRUE)
pax3 <- ProteinAxisTrack(littleTicks=TRUE)
# Plotting
plotTracks(c(paxTrack,pax2,pax3), from=1, to=100)
```

Description

A track to display peptides and protein sequences.

Usage

ProteinSequenceTrack(sequence = NULL, name = "Sequence", ...)

Arguments

- `sequence`: A character or AAString of length one. The sequence to display.
- `name`: A character. The name of the track used in the title panel when plotting.
- `...`: Additional items which will all be interpreted as display parameters.

SequenceTrack, DisplayPars

Examples

```r
if(require(pepDat)){
data(pep_hxb2)
hxb2_seq <- metadata(pep_hxb2)$sequence
st<-ProteinSequenceTrack(sequence=hxb2_seq, name="env")

# Plotting amino acids
plotTracks(st, to = 20)

# When the range becomes wider, only coloured squares are displayed
```
plotTracks(st, to = 100)

# When overplotting, a single line will mark the ProteinSequenceTrack
plotTracks(st)
}
