Package ‘graphite’

February 21, 2024

Version 1.48.0
Date 2023-10-11
Title GRAPH Interaction from pathway Topological Environment
Description Graph objects from pathway topology derived from KEGG, Panther, PathBank, PharmGKB, Reactome SMPDB and WikiPathways databases.
License AGPL-3

as.list.PathwayList

Converting PathwayLists into lists.

### Description

Converts a `PathwayList` into a list of `Pathways`.

### Usage

```r
## S3 method for class 'PathwayList'
as.list(x, ...)  
```

### Arguments

- `x`  
  A `PathwayList` object

- `...`  
  Extra arguments to `as.list`

### Value

A list of pathways.

### Author(s)

Gabriele Sales

### See Also

- `PathwayList`

### Examples

```r
as.list(pathways("hsapiens", "kegg"))
```
buildPathway

Build a Pathway object.

Description

This function creates a new object of type Pathway given a data frame describing its edges.

Usage

buildPathway(id, title, species, database, proteinEdges, metaboliteEdges = NULL, mixedEdges = NULL, timestamp = NULL)

Arguments

id the pathway identifier.
title the title of the pathway.
species the species the pathway belongs to.
database the name of the database the pathway derives from.
proteinEdges a data.frame of edges between proteins (or genes).
   Must have the following columns: src_type, src, dest_type, dest, direction and type.
   Direction must be one of the two strings: "directed" or "undirected".
metaboliteEdges interactions between metabolites.
   Can be NULL. Otherwise, it must have the same structure as proteinEdges.
mixedEdges interactions between metabolites and proteins.
   Can be NULL. Otherwise, it must have the same structure as proteinEdges.
timestamp when the pathway was annotated, by default the time buildPathway is called.

Value

A new Pathway instance.

Examples

edges <- data.frame(src_type = "ENTREZID", src="672",
   dest_type = "ENTREZID", dest="7157",
   direction="undirected", type="binding")
pathway <- buildPathway("#1", "example", "hsapiens", "database", edges)

# Example with metabolites:
edges <- data.frame(src_type = "ENTREZID", src="672",
   dest_type = "ENTREZID", dest="7157",
   direction="undirected", type="binding")
mixed <- data.frame(src_type = "CHEBI", src="77750", 
dest_type = "ENTREZID", dest="7157", 
direction="undirected", type="binding")
pathway <- buildPathway("#1", "example", "hsapiens", "database", 
edges, mixedEdges = mixed)

convertIdentifiers(convertIdentifiers, "example")

Description

Converts the node identifiers of pathways.

If the option Ncpus is set to a value larger than 1 and the package parallel is installed, the conversion procedure will automatically use multiple cores.

Usage

convertIdentifiers(x, to)

Arguments

x can be a list of pathways or a single pathway
to a string describing the type of the identifier. Can assume the values "entrez", "symbol" or the name of one of the columns provided by an Annotation package (for example, "UNIPROT").

Value

A Pathway object.

See Also

Pathway

Examples

r <- pathways("hsapiens", "reactome")
convertIdentifiers(r$mTORC1-mediated signalling", "symbol")
cytoscapePlot

Plot a pathway graph in Cytoscape

Description

Renders the topology of a pathway as a Cytoscape graph.

Usage

cytoscapePlot(pathway, ..., cy.ver = 3)

Arguments

pathway a Pathway object.
... optional arguments forwarded to pathwayGraph.
cy.ver select a Cytoscape version. Only version 3 is supported in this release.

Details

Requires the RCy3 package.

Value

An invisible list with two items:

graph the graphNEL object sent to Cytoscape.
suid the RCy3 network SUID.

See Also

Pathway
pathwayGraph

Examples

## Not run:
r <- pathways()
cytoscapePlot(convertIdentifiers(reactome$'Unwinding of DNA', "symbol"))

## End(Not run)
Pathway-class

Description

A biological pathway.

Variants

A Pathway instance actually stores multiple variants of the same biological data.

This is the list of included variants:

- proteins: includes only interactions among proteins;
- metabolites: includes only interactions among metabolites;
- mixed: includes all available interactions.

Methods

pathwayId(p): Returns the native ID of the pathway.
pathwayTitle(p): Returns the title of the pathway.
pathwayDatabase(p): Returns the name of the database the pathway was derived from.
pathwaySpecies(p): Returns the name of the species in which the pathway was annotated.
pathwayTimestamp(p): Returns the date of pathway data retrieval.
pathwayURL(p): Returns the URL of the pathway in its original database, if available.
convertIdentifiers(p, to): Returns a new pathway using a different type of node identifiers.
edges(p, which = c("proteins", "metabolites", "mixed"), stringsAsFactors = TRUE): Returns a data.frame describing the edges of this pathway.
    The option which selects the desired pathway variant (see section "Variants" above).
    If stringsAsFactors is TRUE, strings are converted to factors.
nodes(p, which = c("proteins", "metabolites", "mixed")): Returns the names of the nodes belonging to this pathway.
    The option which selects the desired pathway variant (see section "Variants" above).
plot(p): Shows the pathway topology in Cytoscape.
runClipper(p, expr, classes, method, ...): Runs a clipper analysis over the pathway.
runTopologyGSA(p, test, exp1, exp2, alpha, ...): Runs a topologyGSA analysis over the pathway.

pathways
Examples

```r
reactome <- pathways("hsapiens", "reactome")
pathway <- reactome[[1]]

pathwayTitle(pathway)
pathwaySpecies(pathway)
nodes(pathway)
edges(pathway)

pathwayDatabases()
```

---

pathwayDatabases

*List the available pathway databases.*

Description

Obtains the list of pathway databases available through graphite.

Usage

```r
pathwayDatabases()
```

Value

Returns a `data.frame` with two columns: `species` and `database`.

Author(s)

Gabriele Sales

See Also

`pathways`

Examples

```r
pathwayDatabases()
```
PathwayList-class

Description
A collection of pathways from a single database.

Extends
Class "Pathways", directly.

PathwayList-class

Class "PathwayList"

Description
A collection of pathways from a single database.

Extends
Class "Pathways", directly.

pathwayGraph

Graph representing the topology of a pathway

Description
Builds a graphNEL object representing the topology of a pathway.

Usage
pathwayGraph(pathway, which = "proteins", edge.types = NULL)

Arguments
pathway
a Pathway object.
which
the pathway variant you want.
See Pathway documentation for a list of the supported variants.
edge.types
keep only the edges matching the type names in this vector.

Value
A graphNEL object.

See Also
Pathway
graphNEL

Examples
r <- pathways("hsapiens", "reactome")
pathwayGraph(r$"mTORC1-mediated signalling", edge.types="Binding")
**Methods**

1[i] returns a selection of the pathways contained in the pathway list.
1[[i]] gives access to one of the pathways contained in the pathway list.
1$'title' loads a pathways by its title.
convertIdentifiers(l, to) returns a new list of pathways using a different type of node identifiers.
length(l) returns the number of pathways contained in the list.
names(l) returns the titles of the pathways contained in the list.
prepareSPIA(l, pathwaySetName, print.names=FALSE) prepares the pathways for a SPIA analysis.
runClipper(l, expr, classes, method, maxNodes=150, ...) runs a clipper analysis over all the pathways in the list.
runTopologyGSA(l, test, exp1, exp2, alpha, maxNodes=150, ...) runs a topologyGSA analysis over all the pathways in the list.

**Author(s)**

Gabriele Sales

**See Also**

pathways

---

**Description**

Retrieve a list of pathways from a database for a given species.

graphite currently supports the following databases:

- KEGG
- PANTHER
- PathBank
- PharmGKB
- Reactome
- SMPDB
- WikiPathways

Call the `pathwayDatabase` function for more details.

**Usage**

pathways(species, database)
Arguments

species       one of the supported species
database      the name of the pathway database

Value

A PathwayList object.

See Also

PathwayList, pathwayDatabases

Examples

pathways("hsapiens", "reactome")

Pathways-class       Class "Pathways"

Description

A virtual class acting as a common parent to all other classes representing pathway databases.

Objects from the Class

A virtual Class: No objects may be created from it.

Methods

No methods defined with class "Pathways" in the signature.

Author(s)

Gabriele Sales

PathwayList
prepareSPIA

Prepare pathway dataset needed by runSPIA.

Description

Prepare pathway dataset needed by runSPIA. See runSPIA and spia for more details.

Usage

```
prepareSPIA(db, pathwaySetName, print.names = FALSE)
```

Arguments

- **db**: a PathwayList object or a list of Pathways.
- **pathwaySetName**: name of the output pathway set.
- **print.names**: print pathway names as the conversion advances.

Value

This function has no return value.

References

See Also

- runSPIA
- spia
- PathwayList
runSPIA

Run SPIA analysis

Description

Run a topological analysis on an expression dataset using SPIA.

Usage

runSPIA(de, all, pathwaySetName, ...)

Arguments

de  A named vector containing log2 fold-changes of the differentially expressed genes. The names of this numeric vector are Entrez gene IDs.

all A vector with the Entrez IDs in the reference set. If the data was obtained from a microarray experiment, this set will contain all genes present on the specific array used for the experiment. This vector should contain all names of the 'de' argument.

pathwaySetName The name of a pathway set created with prepareSPIA.

... Additional options to pass to spia.

Details

The spia option "organism" is internally used. It is an error use it in the additional options.

Value

The same of spia, without KEGG links. A data frame containing the ranked pathways and various statistics: pSize is the number of genes on the pathway; NDE is the number of DE genes per pathway; tA is the observed total preturbation accumulation in the pathway; pNDE is the probability to observe at least NDE genes on the pathway using a hypergeometric model; pPERT is the probability to observe a total accumulation more extreme than tA only by chance; pG is the p-value obtained by combining pNDE and pPERT; gPDr and gFWER are the False Discovery Rate and respectively Bonferroni adjusted global p-values; and the Status gives the direction in which the pathway is perturbed (activated or inhibited).

References

**runTopologyGSA**

Run a topological analysis on an expression dataset using topologyGSA.

**Description**

Use graphical models to test the pathway components highlighting those involved in its deregulation.

If the option `Ncpus` is set to a value larger than 1 and the package `parallel` is installed, the conversion procedure will automatically use multiple cores.

**Usage**

```r
runTopologyGSA(x, test, exp1, exp2, alpha, ...)
```

**Arguments**

- `x`: a `PathwayList`, a list of `Pathways` or a single `Pathway` object.
- `test`: Either "var" and "mean". Determine the type of test used by `topologyGSA`.
- `exp1`: Experiment matrix of the first class, genes in columns.
- `exp2`: Experiment matrix of the second class, genes in columns.
- `alpha`: Significance level of the test.

**Examples**

```r
if (require(SPIA) && require(hgu133plus2.db)) {
  data(colorectalCancer)

  top$ENTREZ <- mapIds(hgu133plus2.db, top$ID, "ENTREZID", "PROBEID", multiVals = "first")
  top <- top[!is.na(top$ENTREZ) & !duplicated(top$ENTREZ),]
  top$ENTREZ <- paste("ENTREZID", top$ENTREZ, sep = ":")
  tg1 <- top[top$adj.P.Val < 0.05,]

  DE_Colorectal = tg1$logFC
  names(DE_Colorectal) <- tg1$ENTREZ
  ALL_Colorectal <- top$ENTREZ

  kegg <- pathways("hsapiens", "kegg")[1:20]
  kegg <- convertIdentifiers(kegg, "ENTREZID")
  prepareSPIA(kegg, "keggEx")
  runSPIA(de = DE_Colorectal, all = ALL_Colorectal, "keggEx")

  unlink("keggExSPIA.RData")
}
```
Additional parameters forwarded to topologyGSA. When invoked on a PathwayList, can use the named option "maxNodes" to limit the analysis to those pathways having up to this given number of nodes.

**Details**

This function produces a warning and returns NULL when the number of genes in common between the expression matrices and the pathway is less than 3.

**Value**

See documentation of `pathway.var.test` and `pathway.mean.test`.

Massa MS, Chiogna M, Romualdi C. Gene set analysis exploiting the topology of a pathway. BMC System Biol. 2010 Sep 1;4:121.

**Examples**

```r
if (require(topologyGSA)) {
  data(examples)
  colnames(y1) <- paste("SYMBOL", colnames(y1), sep = ":")
  colnames(y2) <- paste("SYMBOL", colnames(y2), sep = ":")

  k <- pathways("hsapiens", "kegg")
  p <- convertIdentifiers(k["Fc epsilon RI signaling pathway"], "SYMBOL")
  runTopologyGSA(p, "var", y1, y2, 0.05)
}
```
