Package ‘keggorthology’

March 27, 2024

Title  graph support for KO, KEGG Orthology
Version  2.54.0
Author  VJ Carey <stvjc@channing.harvard.edu>
Description  graphical representation of the Feb 2010 KEGG Orthology.
             The KEGG orthology is a set of pathway IDs that are not to be
             confused with the KEGG ortholog IDs.
Depends  R (>= 2.5.0), stats, graph, hgu95av2.db
Imports  AnnotationDbi, graph, DBI, graph, grDevices, methods, stats,
             tools, utils
Suggests  RBGL, ALL
Maintainer  VJ Carey <stvjc@channing.harvard.edu>
License  Artistic-2.0
biocViews  Pathways, GraphAndNetwork, Visualization, KEGG

git_branch  RELEASE_3_18

git_last_commit  86332c3

git_last_commit_date  2023-10-24
Repository  Bioconductor 3.18
Date/Publication  2024-03-27

R topics documented:

getKOProbes  ................................................................. 2
indRender  ................................................................. 3
keggDF2graph  ............................................................. 4

Index  5
getKOprobes

obtain probe set IDs associated with a KO term

Description

obtain probe set IDs associated with a KO term

Usage

getKOprobes(str, useAcc=TRUE, plat="hgu95av2", na.action=na.omit)

Arguments

str string giving a KEGG orthology term
useAcc logical – use all accessible terms?
plat platform corresponding to a bioconductor annotation package, e.g., hgu95av2.db
na.action function for dealing with NA

Details

Based on keggorthology read of KEGG orthology, March 2 2010. Specifically, we run wget on ftp://ftp.genome.jp/pub/kegg/brite/ko/ko00001.keg and use parsing and modeling code given in inst/keggHTML to generate a data frame respecting the hierarchy, and then keggDF2graph to construct the graph.

Looks up the requested term and gives back the unique probe set ids on the platform.

Value

character vector, typically processed by na.omit

Author(s)

Vince Carey <stvjc@channing.harvard.edu>

Examples

getKOtags("insulin")
es = acc(KOgraph, "Endocrine System")
nm = names(es[[1]])
nm
esp = lapply(nm, getKOprobes)
names(esp) = nm
sapply(esp, length)
indRender

indented textual rendering of nodes of a hierarchical graph

Description

indented textual rendering of nodes of a hierarchical graph

Usage

indRender(klike, from=nodes(klike)[1], indent=" ")

Arguments

klike a graph, with tree structure similar to KOgraph
from a node name from which the rendering should proceed to all leaves
indent token to use for indentation – will be replicated to depth of node to be rendered to its left

Details

Based on keggorthology read of KEGG orthology, March 2 2010. Specifically, we run wget on ftp://ftp.genome.jp/pub/kegg/brite/ko/ko00001.keg and use parsing and modeling code given in inst/keggHTML to generate a data frame respecting the hierarchy, and then keggDF2graph to construct the graph.

Value

NULL

Author(s)

Vince Carey <stvj@channing.harvard.edu>

Examples

data(KOgraph)
indRender(KOgraph, "Human Diseases")
keggDF2graph

create a graph from a specific data frame format for KEGG orthology

Description

create a graph from a specific data frame format for KEGG orthology

Usage

keggDF2graph(df, root="KO.June07root")
data(KOgraph)

Arguments

df the data frame

root a name for root node

Details

the obvious directed graph structure from root to leaf nodes (pathway names) is instantiated for
the orthology, nodeData attribute tag is loaded with the numerical tag for the term in KEGG, and
nodeData attribute depth is loaded with depth from root

Based on keggorthology read of KEGG orthology, March 2 2010. Specifically, we run wget on
given in inst/keggHTML to generate a data frame respecting the hierarchy, and then keggDF2graph
to construct the graph.

Value

a graphNEL-class instance

Note

This is only a support function. The graph is serialized in the package data directory.
