Package ‘sangeranalyseR’

May 3, 2024

Type Package

Title sangeranalyseR: a suite of functions for the analysis of Sanger sequence data in R

Version 1.14.0

Date 2024-04-24

Author Rob Lanfear <rob.lanfear@gmail.com>, Kuan-Hao Chao <ntueeb05howard@gmail.com>

Maintainer Kuan-Hao Chao <ntueeb05howard@gmail.com>

biocViews Genetics, Alignment, Sequencing, SangerSeq, Preprocessing, QualityControl, Visualization, GUI

Description This package builds on sangerseqR to allow users to create contigs from collections of Sanger sequencing reads. It provides a wide range of options for a number of commonly-performed actions including read trimming, detecting secondary peaks, and detecting indels using a reference sequence. All parameters can be adjusted interactively either in R or in the associated Shiny applications. There is extensive online documentation, and the package can outputs detailed HTML reports, including chromatograms.

ChromatogramParam-class

ChromatogramParam

Description
An S4 class storing chromatogram related inputs in a SangerRead S4 object.

Slots

baseNumPerRow It defines maximum base pairs in each row. The default value is 100.

heightPerRow It defines the height of each row in chromatogram. The default value is 200.

signalRatioCutoff The ratio of the height of a secondary peak to a primary peak. Secondary peaks higher than this ratio are annotated. Those below the ratio are excluded. The default value is 0.33.

showTrimmed The logical value storing whether to show trimmed base pairs in chromatogram. The default value is TRUE.

Author(s)
Kuan-Hao Chao

Examples

Chromatogram <- new("ChromatogramParam",
baseNumPerRow = 100,
heightPerRow = 200,
signalRatioCutoff = 0.33,
showTrimmed = TRUE)
generateReport

Method generateReport

Description
A method which generates final reports of the SangerRead, SangerContig, and SangerAlignment instance.

Usage

```r
generateReport(
  object,
  outputDir = NULL,
  includeSangerContig = TRUE,
  includeSangerRead = TRUE,
  colors = "default",
  ...
)
```

Arguments

- **object**: A SangerRead, SangerContig, or SangerAlignment S4 instance.
- **outputDir**: The output directory of the generated HTML report.
- **includeSangerContig**: The parameter that decides whether to include SangerContig level report. The value is `TRUE` or `FALSE` and the default is `TRUE`.
- **includeSangerRead**: The parameter that decides whether to include SangerRead level report. The value is `TRUE` or `FALSE` and the default is `TRUE`.
- **colors**: A vector for users to set the colors of (A, T, C, G, else). There are three options for users to choose from. 1. "default": (green, blue, black, red, purple). 2. "cb_friendly": ((0, 0, 0), (199, 199, 199), (0, 114, 178), (213, 94, 0), (204, 121, 167)). 3. Users can set their own colors with a vector with five elements.

Value
A SangerRead, SangerContig, or SangerAlignment object.

Author(s)
Kuan-Hao Chao
generateReportSA

Examples

data(sangerReadFData)
data(sangerContigData)
data(sangerAlignmentData)
## Not run:
generateReport(sangerReadFData)
generateReport(sangerReadFData, colors="cb_friendly")
generateReport(sangerContigData)
generateReport(sangerContigData, colors="cb_friendly")
generateReport(sangerAlignmentData)
generateReport(sangerAlignmentData, colors="cb_friendly")
## End(Not run)

generateReportSA  Method generateReportSA

Description

Method generateReportSA

Usage

generateReportSA(
  object,
  outputDir = NULL,
  includeSangerContig = TRUE,
  includeSangerRead = TRUE,
  colors = "default",
  ...
)

Arguments

object  A SangerAlignment S4 instance.
outputDir  The output directory of the generated HTML report.
includeSangerContig  The parameter that decides whether to include SangerContig level report. The value is TRUE or FALSE and the default is TRUE.
includeSangerRead  The parameter that decides whether to include SangerRead level report. The value is TRUE or FALSE and the default is TRUE.
colors  A vector for users to set the colors of (A, T, C, G, else). There are three options for users to choose from. 1. "default": (green, blue, black, red, purple). 2. "cb_friendly": ((0, 0, 0), (199, 199, 199), (0, 114, 178), (213, 94, 0), (204, 121, 167)). 3. Users can set their own colors with a vector with five elements.
...  Further generateReportSA-related parameters.
generateReportSC

Value

The output absolute path to the SangerAlignment’s HTML file.

Examples

data(sangerAlignmentData)
## Not run:
generateReportSA(sangerAlignmentData)
## End(Not run)

generateReportSC  Method generateReportSC

Description

Method generateReportSC

Usage

generateReportSC(
  object,
  outputDir = NULL,
  includeSangerRead = TRUE,
  colors = "default",
  ...
)

Arguments

object  A SangerContig S4 instance.
outputDir  The output directory of the generated HTML report.
includeSangerRead  The parameter that decides whether to include SangerRead level report. The value is TRUE or FALSE and the default is TRUE.
colors  A vector for users to set the colors of (A, T, C, G, else). There are three options for users to choose from. 1. "default": (green, blue, black, red, purple). 2. "cb_friendly": ((0, 0, 0), (199, 199, 199), (0, 114, 178), (213, 94, 0), (204, 121, 167)). 3. Users can set their own colors with a vector with five elements.
...

Value

The output absolute path to the SangerContig’s HTML file.
Method `generateReportSR`

**Usage**

```r
generateReportSR(object, outputDir = NULL, colors = "default", ...)
```

**Arguments**

- `object`: A SangerRead S4 instance.
- `outputDir`: The output directory of the generated HTML report.
- `colors`: A vector for users to set the colors of (A, T, C, G, else). There are three options for users to choose from. 1. "default": (green, blue, black, red, purple). 2. "cb_friendly": ((0, 0, 0), (199, 199, 199), (0, 114, 178), (213, 94, 0), (204, 121, 167)). 3. Users can set their own colors with a vector with five elements.
- `...`: Further `generateReportSR`-related parameters.

**Value**

The output absolute path to the SangerRead's HTML file.

**Examples**

```r
data(sangerContigData)
## Not run:
generateReportSC(sangerContigData)
## End(Not run)
```

```r
data(sangerReadFData)
## Not run:
generateReportSR(sangerReadFData)
## End(Not run)
```
Method launchApp

Description

A method which launches Shiny application of the SangerContig and SangerAlignment instance.

Usage

launchApp(object, outputDir = NULL, colors = "default")

Arguments

- **object**: A SangerContig or SangerAlignment S4 instance.
- **outputDir**: The output directory of the saved new SangerContig or SangerAlignment S4 instance.
- **colors**: A vector for users to set the colors of (A, T, C, G, else). There are three options for users to choose from. 1. "default": (green, blue, black, red, purple). 2. "cb_friendly": ((0, 0, 0), (199, 199, 199), (0, 114, 178), (213, 94, 0), (204, 121, 167)). 3. Users can set their own colors with a vector with five elements.

Value

A SangerContig or SangerAlignment object.

Author(s)

Kuan-Hao Chao

Examples

data(sangerContigData)
data(sangerAlignmentData)
## Not run:
launchApp(sangerContigData)
launchApp(sangerContigData, colors="cb_friendly")
launchApp(sangerAlignmentData)
launchApp(sangerAlignmentData, colors="cb_friendly")
## End(Not run)
Method `launchAppSA`

**Description**

Method `launchAppSA`

**Usage**

```r
launchAppSA(object, outputDir = NULL, colors = "default")
```

**Arguments**

- `object`: A `SangerAlignment` S4 instance.
- `outputDir`: The output directory of the saved new `SangerAlignment` S4 instance.
- `colors`: A vector for users to set the colors of (A, T, C, G, else). There are three options for users to choose from. 1. "default": (green, blue, black, red, purple). 2. "cb_friendly": ((0, 0, 0), (199, 199, 199), (0, 114, 178), (213, 94, 0), (204, 121, 167)). 3. Users can set their own colors with a vector with five elements.

**Value**

A `shiny.appobj` object.

**Examples**

```r
data(sangerAlignmentData)
## Not run:
launchAppSA(sangerAlignmentData)
## End(Not run)
```

Method `launchAppSC`

**Description**

Method `launchAppSC`

**Usage**

```r
launchAppSC(object, outputDir = NULL, colors = "default")
```
Arguments

object A SangerContig S4 instance.
outputDir The output directory of the saved new SangerContig S4 instance.
colors A vector for users to set the colors of (A, T, C, G, else). There are three options for users to choose from. 1. "default": (green, blue, black, red, purple). 2. "cb_friendly": ((0, 0, 0), (199, 199, 199), (0, 114, 178), (213, 94, 0), (204, 121, 167)). 3. Users can set their own colors with a vector with five elements.

Value
A shiny.appobj object.

Examples

data(sangerContigData)
## Not run:
launchAppSC(sangerContigData)
## End(Not run)

MakeBaseCalls

Method MakeBaseCalls

Description
Method MakeBaseCalls

Usage
MakeBaseCalls(object, signalRatioCutoff = 0.33)

Arguments

object A SangerRead S4 instance.
signalRatioCutoff The ratio of the height of a secondary peak to a primary peak. Secondary peaks higher than this ratio are annotated. Those below the ratio are excluded. The default value is 0.33.

Value
A SangerRead instance.

Examples

data(sangerReadFData)
MakeBaseCalls(sangerReadFData, signalRatioCutoff = 0.22)
ObjectResults-class

**ObjectResults**

**Description**

An S4 class storing results related inputs in a SangerRead, SangerContig, and SangerAlignment S4 object.

**Slots**

- printLevel

**Author(s)**

Kuan-Hao Chao

**Examples**

```r
objectResults <- new("ObjectResults",
                  creationResult = TRUE,
                  errorMessages = character(0),
                  errorTypes = character(0),
                  warningMessages = character(0),
                  warningTypes = character(0),
                  readResultTable = data.frame(),
                  printLevel = "SangerRead")
```

**qualityBasePlot**

**Method qualityBasePlot**

**Description**

Method qualityBasePlot

**Usage**

```r
qualityBasePlot(object)
```

**Arguments**

- `object` A QualityReport or SangerRead S4 instance

**Value**

A quality plot.
QualityReport-class

Examples

```r
data(qualityReportData)
data(sangerReadFData)
qualityBasePlot(qualityReportData)
qualityBasePlot(sangerReadFData)
```

QualityReport-class  QualityReport

Description

An S4 class storing quality related inputs and results in a SangerRead S4 object.

Slots

- **TrimmingMethod** The read trimming method for this SangerRead. The value must be "M1" (the default) or "M2".
- **M1TrimmingCutoff** The trimming cutoff for the Method 1. If `TrimmingMethod` is "M1", then the default value is 0.0001. Otherwise, the value must be NULL.
- **M2CutoffQualityScore** The trimming cutoff quality score for the Method 2. If `TrimmingMethod` is "M2", then the default value is 20. Otherwise, the value must be NULL. It works with `M2SlidingWindowSize`.
- **M2SlidingWindowSize** The trimming sliding window size for the Method 2. If `TrimmingMethod` is "M2", then the default value is 10. Otherwise, the value must be NULL. It works with `M2CutoffQualityScore`.
- **qualityPhredScores** The Phred quality scores of each base pairs after base calling.
- **qualityBaseScores** The probability of incorrect base call of each base pairs. They are calculated from `qualityPhredScores`.
- **rawSeqLength** The number of nucleotides of raw primary DNA sequence.
- **trimmedSeqLength** The number of nucleotides of trimmed primary DNA sequence.
- **trimmedStartPos** The base pair index of trimming start point from 5' end of the sequence.
- **trimmedFinishPos** The base pair index of trimming finish point from 3' end of the sequence.
- **rawMeanQualityScore** The mean quality score of the primary sequence after base calling. In other words, it is the mean of `qualityPhredScores`.
- **trimmedMeanQualityScore** The mean quality score of the trimmed primary sequence after base calling.
- **rawMinQualityScore** The minimum quality score of the primary sequence after base calling.
- **trimmedMinQualityScore** The minimum quality score of the trimmed primary sequence after base calling.
- **remainingRatio** The remaining sequence length ratio after trimming.

Author(s)

Kuan-Hao Chao
Examples

```
inputFilesPath <- system.file("extdata/", package = "sangeranalyseR")
A_chloroticaFFN <- file.path(inputFilesPath,
    "Allolobophora_chlorotica",
    "ACHLO",
    "Achl_ACHLO006-09_1_F.ab1")
sangerReadF <- new("SangerRead",
    inputSource = "ABIF",
    readFeature = "Forward Read",
    readFileName = A_chloroticaFFN,
    geneticCode = GENETIC_CODE,
    TrimmingMethod = "M1",
    M1TrimmingCutoff = 0.0001,
    M2CutoffQualityScore = NULL,
    M2SlidingWindowSize = NULL,
    baseNumPerRow = 100,
    heightPerRow = 200,
    signalRatioCutoff = 0.33,
    showTrimmed = TRUE)
"@"(sangerReadF, QualityReport)
```

Description

A QualityReport method which creates quality base interactive plot.

Usage

```
## S4 method for signature 'QualityReport'
qualityBasePlot(object)
```

Arguments

```
object      A QualityReport S4 instance.
```

Value

A quality plot.

Examples

```
data("qualityReportData")
## Not run:
qualityBasePlot(qualityReportData)
## End(Not run)
```
### Description

A QualityReport method which updates quality base interactive plot.

### Usage

```r
## S4 method for signature 'QualityReport'
updateQualityParam(
  object,
  TrimmingMethod = "M1",
  M1TrimmingCutoff = 1e-04,
  M2CutoffQualityScore = NULL,
  M2SlidingWindowSize = NULL
)
```

### Arguments

- `object`: A QualityReport S4 instance.
- `TrimmingMethod`: The read trimming method for this SangerRead. The value must be "M1" (the default) or 'M2'.
- `M1TrimmingCutoff`: The trimming cutoff for the Method 1. If `TrimmingMethod` is "M1", then the default value is 0.0001. Otherwise, the value must be NULL.
- `M2CutoffQualityScore`: The trimming cutoff quality score for the Method 2. If `TrimmingMethod` is 'M2', then the default value is 20. Otherwise, the value must be NULL. It works with `M2SlidingWindowSize`.
- `M2SlidingWindowSize`: The trimming sliding window size for the Method 2. If `TrimmingMethod` is 'M2', then the default value is 10. Otherwise, the value must be NULL. It works with `M2CutoffQualityScore`.

### Value

A QualityReport instance.

### Examples

```r
data("qualityReportData")
updateQualityParam(qualityReportData,
  TrimmingMethod = "M2",
  M1TrimmingCutoff = NULL,
  M2CutoffQualityScore = 30,
  M2SlidingWindowSize = 15)
```
qualityReportData

| qualityReportData | QualityReport instance |

**Description**

QualityReport instance

**Usage**

```r
data(qualityReportData)
```

**Author(s)**

Kuan-Hao Chao

---

readTable

| readTable | Method readTable |

**Description**

Method readTable

**Usage**

```r
readTable(object, indentation = 0, ...)
```

**Arguments**

- `object` A SangerRead, SangerContig, or SangerAlignment S4 instance.
- `indentation` The indentation for different level printing
- `...` Further generateReportSR-related parameters.

**Value**

None.

**Examples**

```r
data(sangerReadFData)
data(sangerContigData)
data(sangerAlignmentData)
## Not run:
readTable(sangerReadFData)
readTable(sangerContigData)
readTable(sangerAlignmentData)
## End(Not run)
```
Description

the wrapper function for SangerAlignment

Usage

SangerAlignment(
  printLevel = \"SangerAlignment\",
  inputSource = \"ABIF\",
  processMethod = \"REGEX\",
  ABIF_Directory = NULL,
  FASTA_File = NULL,
  REGEX_SuffixForward = NULL,
  REGEX_SuffixReverse = NULL,
  CSV_NamesConversion = NULL,
  geneticCode = GENETIC_CODE,
  TrimmingMethod = \"M1\",
  M1TrimmingCutoff = 1e-04,
  M2CutoffQualityScore = NULL,
  M2SlidingWindowSize = NULL,
  baseNumPerRow = 100,
  heightPerRow = 200,
  signalRatioCutoff = 0.33,
  showTrimmed = TRUE,
  refAminoAcidSeq = \"\",
  minReadsNum = 2,
  minReadLength = 20,
  minFractionCall = 0.5,
  maxFractionLost = 0.5,
  acceptStopCodons = TRUE,
  readingFrame = 1,
  processorsNum = 1
)

Arguments

inputSource  The input source of the raw file. It must be "ABIF" or "FASTA". The default value is "ABIF".

ABIF_Directory The parent directory of all of the reads contained in ABIF format you wish to analyse. In SangerAlignment, all reads in subdirectories will be scanned recursively.

FASTA_File If inputSource is "FASTA", then this value has to be the name of the FASTA file; if inputSource is "ABIF", then this value is "" by default.
SangerAlignment

REGEX_SuffixForward
The suffix of the filenames for forward reads in regular expression, i.e. reads that do not need to be reverse-complemented. For forward reads, it should be ".F.ab1".

REGEX_SuffixReverse
The suffix of the filenames for reverse reads in regular expression, i.e. reads that need to be reverse-complemented. For reverse reads, it should be ".R.ab1".

CSV_NamesConversion
The file path to the CSV file that provides read names that follow the naming regulation. If inputSource is "FASTA", then users need to prepare the csv file or make sure the original names inside FASTA file are valid; if inputSource is "ABIF", then this value is NULL by default.

geneticCode
Named character vector in the same format as GENETIC_CODE (the default), which represents the standard genetic code. This is the code with which the function will attempt to translate your DNA sequences. You can get an appropriate vector with the getGeneticCode() function. The default is the standard code.

TrimmingMethod
TrimmingMethod The read trimming method for this SangerRead. The value must be "M1" (the default) or 'M2'.

M1TrimmingCutoff
The trimming cutoff for the Method 1. If TrimmingMethod is "M1", then the default value is 0.0001. Otherwise, the value must be NULL.

M2CutoffQualityScore
The trimming cutoff quality score for the Method 2. If TrimmingMethod is 'M2', then the default value is 20. Otherwise, the value must be NULL. It works with M2SlidingWindowSize.

M2SlidingWindowSize
The trimming sliding window size for the Method 2. If TrimmingMethod is 'M2', then the default value is 10. Otherwise, the value must be NULL. It works with M2CutoffQualityScore.

baseNumPerRow
It defines maximum base pairs in each row. The default value is 100.

heightPerRow
It defines the height of each row in chromatogram. The default value is 200.

signalRatioCutoff
The ratio of the height of a secondary peak to a primary peak. Secondary peaks higher than this ratio are annotated. Those below the ratio are excluded. The default value is 0.33.

showTrimmed
The logical value storing whether to show trimmed base pairs in chromatogram. The default value is TRUE.

refAminoAcidSeq
An amino acid reference sequence supplied as a string or an AAString object. If your sequences are protein-coding DNA sequences, and you want to have frameshifts automatically detected and corrected, supply a reference amino acid sequence via this argument. If this argument is supplied, the sequences are then kept in frame for the alignment step. Fwd sequences are assumed to come from the sense (i.e. coding, or "+") strand. The default value is "".
minReadsNum  The minimum number of reads required to make a consensus sequence, must be 2 or more. The default value is 2.

minReadLength  Reads shorter than this will not be included in the readset. The default 20 means that all reads with length of 20 or more will be included. Note that this is the length of a read after it has been trimmed.

minFractionCall  Minimum fraction of the sequences required to call a consensus sequence for SangerContig at any given position (see the ConsensusSequence() function from DECIPHER for more information). Defaults to 0.75 implying that 3/4 of all reads must be present in order to call a consensus.

maxFractionLost  Numeric giving the maximum fraction of sequence information that can be lost in the consensus sequence for SangerContig (see the ConsensusSequence() function from DECIPHER for more information). Defaults to 0.5, implying that each consensus base can ignore at most 50 percent of the information at a given position.

acceptStopCodons  The logical value TRUE or FALSE. TRUE (the default): keep all reads, regardless of whether they have stop codons; FALSE: reject reads with stop codons. If FALSE is selected, then the number of stop codons is calculated after attempting to correct frameshift mutations (if applicable).

readingFrame  1, 2, or 3. Only used if accept.stop.codons == FALSE. This specifies the reading frame that is used to determine stop codons. If you use a refAminoAcidSeq, then the frame should always be 1, since all reads will be shifted to frame 1 during frameshift correction. Otherwise, you should select the appropriate reading frame.

processorsNum  The number of processors to use, or NULL (the default) for all available processors.

minFractionCallSA  Minimum fraction of the sequences required to call a consensus sequence for SangerAlignment at any given position (see the ConsensusSequence() function from DECIPHER for more information). Defaults to 0.75 implying that 3/4 of all reads must be present in order to call a consensus.

maxFractionLostSA  Numeric giving the maximum fraction of sequence information that can be lost in the consensus sequence for SangerAlignment (see the ConsensusSequence() function from DECIPHER for more information). Defaults to 0.5, implying that each consensus base can ignore at most 50 percent of the information at a given position.

Value  A SangerAlignment instance.

Author(s)  Kuan-Hao Chao
Examples

```r
rawDataDir <- system.file("extdata", package = "sangeranalyseR")
parentDir <- file.path(rawDataDir, "Allolobophora_chlorotica", "RBNII")
REGEX_SuffixForward <- "_[0-9]*_F.ab1$"
REGEX_SuffixReverse <- "_[0-9]*_R.ab1$"
sangerAlignment <- SangerAlignment(
  inputSource = "ABIF",
  ABIF_Directory = parentDir,
  REGEX_SuffixForward = REGEX_SuffixForward,
  REGEX_SuffixReverse = REGEX_SuffixReverse,
  refAminoAcidSeq = "IHWYPLFTGLTLNNKWLKSHFIIMFIGVNLTFFPQHFLGLAGMPRRYSDYPDAYTTWNIVSTIGSTISLLGILFFFFIIWESLVSQRQVIYPIQLNSSIEWYQNTPPAEHSYSELPLLTN",
  TrimmingMethod = "M1",
  M1TrimmingCutoff = 0.0001,
  M2CutoffQualityScore = NULL,
  M2SlidingWindowSize = NULL,
  baseNumPerRow = 100,
  heightPerRow = 200,
  signalRatioCutoff = 0.33,
  showTrimmed = TRUE,
  processorsNum = 2)
```

Description

An S4 class containing SangerContigs lists and contigs alignment results which corresponds to a final alignment in Sanger sequencing.

Slots

- `objectResults` This is the object that stores all information of the creation result.
- `inputSource` The input source of the raw file. It must be "ABIF" or "FASTA". The default value is "ABIF".
- `processMethod` The method to create a contig from reads. The value is "REGEX" or "CSV". The default value is "REGEX".
- `ABIF_Directory` If `inputSource` is "ABIF", then this value is the path of a parent directory storing all reads in ABIF format you want to analyse. If `inputSource` is "FASTA", then this value has to be NULL by default.
- `FASTA_File` If `inputSource` is "FASTA", then this value has to be the path to a valid FASTA file; if `inputSource` is "ABIF", then this value has to be NULL by default.
- `REGEX_SuffixForward` The suffix of the filenames for forward reads in regular expression, i.e. reads that do not need to be reverse-complemented. For forward reads, it should be "_.F.ab1".
- `REGEX_SuffixReverse` The suffix of the filenames for reverse reads in regular expression, i.e. reads that need to be reverse-complemented. For reverse reads, it should be "_.R.ab1".
CSV_NamesConversion  The file path to the CSV file that provides read names, directions, and their contig groups. If `processMethod` is "CSV", then this value has to be the path to a valid CSV file; if `processMethod` is "REGEX", then this value has to be NULL by default.

geneticCode  Named character vector in the same format as GENETIC_CODE (the default), which represents the standard genetic code. This is the code with which the function will attempt to translate your DNA sequences. You can get an appropriate vector with the getGeneticCode() function. The default is the standard code.

refAminoAcidSeq  An amino acid reference sequence supplied as a string or an AAString object. If your sequences are protein-coding DNA sequences, and you want to have frameshifts automatically detected and corrected, supply a reference amino acid sequence via this argument. If this argument is supplied, the sequences are then kept in frame for the alignment step. Fwd sequences are assumed to come from the sense (i.e. coding, or "+") strand. The default value is "."

ccontigList  A list storing all SangerContigs S4 instances.

ccontigsConsensus  The consensus read of all SangerContig S4 instances in DNAString object.

ccontigsAlignment  The alignment of all SangerContig S4 instances with the called consensus sequence in DNAStringSet object. Users can use BrowseSeqs() to view the alignment.

ccontigsTree  A phylo instance returned by bionj function in ape package. It can be used to draw the tree.

### Description

A SangerAlignment method which generates final reports of the SangerContig instance.

### Usage

```r
## S4 method for signature 'SangerAlignment'
genenerateReportSA(
  object, outputDir,
  includeSangerContig = TRUE,
  includeSangerRead = TRUE,
  colors
)
```

### Arguments

- **object** A SangerAlignment S4 instance.
- **outputDir** The output directory of the generated HTML report.
- **includeSangerContig** The parameter that decides whether to include SangerContig level report. The value is TRUE or FALSE and the default is TRUE.
- **includeSangerRead** The parameter that decides whether to include SangerRead level report. The value is TRUE or FALSE and the default is TRUE.
colors

A vector for users to set the colors of (A, T, C, G, else). There are three options for users to choose from. 1. "default": (green, blue, black, red, purple). 2. "cb_friendly": ((0, 0, 0), (199, 199, 199), (0, 114, 178), (213, 94, 0), (204, 121, 167)). 3. Users can set their own colors with a vector with five elements.

Value

The output absolute path to the SangerAlignment's HTML file.

Examples

data("sangerAlignmentData")
## Not run:
genenerateReportSA(sangerAlignmentData)
genenerateReportSA(sangerAlignmentData, colors="cb_friendly")
## End(Not run)

## S4 method for signature 'SangerAlignment'
launchAppSA(object, outputDir = NULL, colors = "default")

Arguments

- object: A SangerAlignment S4 instance.
- outputDir: The output directory of the saved new SangerContig S4 instance.
- colors: A vector for users to set the colors of (A, T, C, G, else). There are three options for users to choose from. 1. "default": (green, blue, black, red, purple). 2. "cb_friendly": ((0, 0, 0), (199, 199, 199), (0, 114, 178), (213, 94, 0), (204, 121, 167)). 3. Users can set their own colors with a vector with five elements.

Value

A shiny.appobj object.

Examples

data("sangerAlignmentData")
RShinySA <- launchAppSA(sangerAlignmentData)
RShinySA <- launchAppSA(sangerAlignmentData, colors="cb_friendly")
SangerAlignment-class-updateQualityParam

updateQualityParam

Description

A SangerAlignment method which updates QualityReport parameter for each the SangerRead instance inside SangerAlignment.

Usage

## S4 method for signature 'SangerAlignment'
updateQualityParam(
  object,
  TrimmingMethod = "M1",
  M1TrimmingCutoff = 1e-04,
  M2CutoffQualityScore = NULL,
  M2SlidingWindowSize = NULL,
  processorsNum = NULL
)

Arguments

- **object**: A SangerAlignment S4 instance.
- **TrimmingMethod**: The read trimming method for this SangerRead. The value must be "M1" (the default) or 'M2'.
- **M1TrimmingCutoff**: The trimming cutoff for the Method 1. If TrimmingMethod is "M1", then the default value is 0.0001. Otherwise, the value must be NULL.
- **M2CutoffQualityScore**: The trimming cutoff quality score for the Method 2. If TrimmingMethod is 'M2', then the default value is 20. Otherwise, the value must be NULL. It works with M2SlidingWindowSize.
- **M2SlidingWindowSize**: The trimming sliding window size for the Method 2. If TrimmingMethod is 'M2', then the default value is 10. Otherwise, the value must be NULL. It works with M2CutoffQualityScore.
- **processorsNum**: The number of processors to use, or NULL (the default) for all available processors.

Value

A SangerAlignment instance.
Examples

```r
data("sangerAlignmentData")
## Not run:
updateQualityParam(sangerAlignmentData,
  TrimmingMethod = "M2",
  M1TrimmingCutoff = NULL,
  M2CutoffQualityScore = 40,
  M2SlidingWindowSize = 15)
## End(Not run)
```

Description

A SangerAlignment method which writes sequences into Fasta files.

Usage

```r
## S4 method for signature 'SangerAlignment'
writeFastaSA(
  object,
  outputDir = NULL,
  compress = FALSE,
  compression_level = NA,
  selection = "all"
)
```

Arguments

- **object**: A SangerAlignment S4 instance.
- **outputDir**: The output directory of generated FASTA files.
- **compress**: Like for the `save` function in base R, must be TRUE or FALSE (the default), or a single string specifying whether writing to the file is to use compression. The only type of compression supported at the moment is "gzip". This parameter will be passed to `writeXStringSet` function in Biostrings package.
- **compression_level**: This parameter will be passed to `writeXStringSet` function in Biostrings package.
- **selection**: This value can be all, contigs_alignment, contigs_unalignment or all_reads. It generates reads and contigs FASTA files.

Value

The output directory of FASTA files.
Examples

```r
data("sangerAlignmentData")
writeFastaSA(sangerAlignmentData)
```

---

**sangerAlignmentData**

---

**Description**

*sangeranalyseR-package*

---

**SangerContig**  
*SangerContig*

---

**Description**

the wrapper function for SangerContig
Usage

SangerContig(
  printLevel = "SangerContig",
  inputSource = "ABIF",
  processMethod = "REGEX",
  ABIF_Directory = NULL,
  FASTA_File = NULL,
  REGEX_SuffixForward = NULL,
  REGEX_SuffixReverse = NULL,
  CSV_NamesConversion = NULL,
  contigName = NULL,
  geneticCode = GENETIC_CODE,
  TrimmingMethod = "M1",
  M1TrimmingCutoff = 1e-04,
  M2CutoffQualityScore = NULL,
  M2SlidingWindowSize = NULL,
  baseNumPerRow = 100,
  heightPerRow = 200,
  signalRatioCutoff = 0.33,
  showTrimmed = TRUE,
  refAminoAcidSeq = "",
  minReadsNum = 2,
  minReadLength = 20,
  minFractionCall = 0.5,
  maxFractionLost = 0.5,
  acceptStopCodons = TRUE,
  readingFrame = 1,
  processorsNum = 1
)

Arguments

inputSource The input source of the raw file. It must be "ABIF" or "FASTA". The default value is "ABIF".
ABIF_Directory The parent directory of all of the reads contained in ABIF format you wish to analyse. In SangerContig, all reads must be in the first layer in this directory.
FASTA_File If inputSource is "FASTA", then this value has to be the name of the FASTA file; if inputSource is "ABIF", then this value is "" by default.
REGEX_SuffixForward The suffix of the filenames for forward reads in regular expression, i.e. reads that do not need to be reverse-complemented. For forward reads, it should be ".F.ab1".
REGEX_SuffixReverse The suffix of the filenames for reverse reads in regular expression, i.e. reads that need to be reverse-complemented. For reverse reads, it should be ".R.ab1".
CSV_NamesConversion The file path to the CSV file that provides read names that follow the naming regulation. If inputSource is "FASTA", then users need to prepare the csv file
or make sure the original names inside FASTA file are valid; if inputSource is "ABIF", then this value is NULL by default.

contigName
The contig name of all the reads in ABIF_Directory.

geneticCode
Named character vector in the same format as GENETIC_CODE (the default), which represents the standard genetic code. This is the code with which the function will attempt to translate your DNA sequences. You can get an appropriate vector with the getGeneticCode() function. The default is the standard code.

TrimmingMethod
TrimmingMethod The read trimming method for this SangerRead. The value must be "M1" (the default) or 'M2'.

M1TrimmingCutoff
The trimming cutoff for the Method 1. IfTrimmingMethod is "M1", then the default value is 0.0001. Otherwise, the value must be NULL.

M2CutoffQualityScore
The trimming cutoff quality score for the Method 2. IfTrimmingMethod is 'M2', then the default value is 20. Otherwise, the value must be NULL. It works with M2SlidingWindowSize.

M2SlidingWindowSize
The trimming sliding window size for the Method 2. IfTrimmingMethod is 'M2', then the default value is 10. Otherwise, the value must be NULL. It works with M2CutoffQualityScore.

baseNumPerRow
It defines maximum base pairs in each row. The default value is 100.

heightPerRow
It defines the height of each row in chromatogram. The default value is 200.

signalRatioCutoff
The ratio of the height of a secondary peak to a primary peak. Secondary peaks higher than this ratio are annotated. Those below the ratio are excluded. The default value is 0.33.

showTrimmed
The logical value storing whether to show trimmed base pairs in chromatogram. The default value is TRUE.

refAminoAcidSeq
An amino acid reference sequence supplied as a string or an AAString object. If your sequences are protein-coding DNA sequences, and you want to have frameshifts automatically detected and corrected, supply a reference amino acid sequence via this argument. If this argument is supplied, the sequences are then kept in frame for the alignment step. Fwd sequences are assumed to come from the sense (i.e. coding, or "+") strand. The default value is "".

minReadsNum
The minimum number of reads required to make a consensus sequence, must be 2 or more. The default value is 2.

minReadLength
Reads shorter than this will not be included in the readset. The default 20 means that all reads with length of 20 or more will be included. Note that this is the length of a read after it has been trimmed.

minFractionCall
Minimum fraction of the sequences required to call a consensus sequence for SangerContig at any given position (see the ConsensusSequence() function from DECIPHER for more information). Defaults to 0.75 implying that 3/4 of all reads must be present in order to call a consensus.
maxFractionLost
Numeric giving the maximum fraction of sequence information that can be lost in the consensus sequence for SangerContig (see the ConsensusSequence() function from DECIPHER for more information). Defaults to 0.5, implying that each consensus base can ignore at most 50 percent of the information at a given position.

acceptStopCodons
The logical value TRUE or FALSE. TRUE (the default): keep all reads, regardless of whether they have stop codons; FALSE: reject reads with stop codons. If FALSE is selected, then the number of stop codons is calculated after attempting to correct frameshift mutations (if applicable).

readingFrame 1, 2, or 3. Only used if accept.stop.codons == FALSE. This specifies the reading frame that is used to determine stop codons. If you use a refAminoAcidSeq, then the frame should always be 1, since all reads will be shifted to frame 1 during frameshift correction. Otherwise, you should select the appropriate reading frame.

processorsNum
The number of processors to use, or NULL (the default) for all available processors.

Value
A SangerContig instance.

Author(s)
Kuan-Hao Chao

Examples
```r
rawDataDir <- system.file("extdata", package = "sangeranalyseR")
parentDir <- file.path(rawDataDir, "Allolobophora_chlorotica", "ACHLO")
contigName <- "Achl_ACHLO006-09"
REGEX_SuffixForward <- ".F.ab1"
REGEX_SuffixReverse <- ".R.ab1"
sangerContig <- SangerContig(
  inputSource = "ABIF",
  ABIF_Directory = parentDir,
  contigName = contigName,
  REGEX_SuffixForward = REGEX_SuffixForward,
  REGEX_SuffixReverse = REGEX_SuffixReverse,
  refAminoAcidSeq = "SRQWLSTNHKDGTLYFIFGAWMGVGTLS1LIRAELGHPGALIGDDQIYNTVTAHAFIMIFFMVMPIMIGGFNG",
  TrimmingMethod = "M2",
  M1TrimmingCutoff = NULL,
  M2CutoffQualityScore = 20,
  M2SlidingWindowSize = 10,
  baseNumPerRow = 100,
  heightPerRow = 200,
  signalRatioCutoff = 0.33,
  showTrimmed = TRUE,
  processorsNum = 2)
```
Description

An S4 class containing forward and reverse SangerRead lists and alignment, consensus read results which corresponds to a contig in Sanger sequencing.

Slots

- **objectResults**: This is the object that stores all information of the creation result.
- **inputSource**: The input source of the raw file. It must be "ABIF" or "FASTA". The default value is "ABIF".
- **processMethod**: The method to create a contig from reads. The value is "REGEX" or "CSV". The default value is "REGEX".
- **ABIF_Directory**: If inputSource is "ABIF", then this value is the path of a parent directory storing all reads in ABIF format you want to analyse. If inputSource is "FASTA", then this value has to be NULL by default.
- **FASTA_File**: If inputSource is "FASTA", then this value has to be the path to a valid FASTA file; if inputSource is "ABIF", then this value has to be NULL by default.
- **REGEX_SuffixForward**: The suffix of the filenames for forward reads in regular expression, i.e. reads that do not need to be reverse-complemented.
- **REGEX_SuffixReverse**: The suffix of the filenames for reverse reads in regular expression, i.e. reads that need to be reverse-complemented.
- **CSV_NamesConversion**: The file path to the CSV file that provides read names, directions, and their contig groups. If processMethod is "CSV", then this value has to be the path to a valid CSV file; if processMethod is "REGEX", then this value has to be NULL by default.
- **contigName**: The contig name of all the reads in ABIF_Directory.
- **geneticCode**: Named character vector in the same format as GENETIC_CODE (the default), which represents the standard genetic code. This is the code with which the function will attempt to translate your DNA sequences. You can get an appropriate vector with the getGeneticCode() function. The default is the standard code.
- **forwardReadList**: The list of SangerRead S4 instances which are all forward reads.
- **reverseReadList**: The list of SangerRead S4 instances which are all reverse reads.
- **minReadsNum**: The minimum number of reads required to make a consensus sequence, must be 2 or more. The default value is 2.
- **minReadLength**: Reads shorter than this will not be included in the readset. The default 20 means that all reads with length of 20 or more will be included. Note that this is the length of a read after it has been trimmed.
- **refAminoAcidSeq**: An amino acid reference sequence supplied as a string or an AAString object. If your sequences are protein-coding DNA sequences, and you want to have frameshifts automatically detected and corrected, supply a reference amino acid sequence via this argument.
If this argument is supplied, the sequences are then kept in frame for the alignment step. Fwd sequences are assumed to come from the sense (i.e. coding, or "+") strand. The default value is ".

minFractionCall Minimum fraction of the sequences required to call a consensus sequence for SangerContig at any given position (see the ConsensusSequence() function from DECIPHER for more information). Defaults to 0.75 implying that 3/4 of all reads must be present in order to call a consensus.

maxFractionLost Numeric giving the maximum fraction of sequence information that can be lost in the consensus sequence for SangerContig (see the ConsensusSequence() function from DECIPHER for more information). Defaults to 0.5, implying that each consensus base can ignore at most 50 percent of the information at a given position.

acceptStopCodons The logical value TRUE or FALSE. TRUE (the default): keep all reads, regardless of whether they have stop codons; FALSE: reject reads with stop codons. If FALSE is selected, then the number of stop codons is calculated after attempting to correct frameshift mutations (if applicable).

readingFrame 1, 2, or 3. Only used if accept.stop.codons == FALSE. This specifies the reading frame that is used to determine stop codons. If you use a refAminoAcidSeq, then the frame should always be 1, since all reads will be shifted to frame 1 during frameshift correction. Otherwise, you should select the appropriate reading frame.

contigSeq The consensus read of all SangerRead S4 instances in DNAString object.

alignment The alignment of all SangerRead S4 instances with the called consensus sequence in DNAStringSet object. Users can use BrowseSeqs() to view the alignment.

differencesDF A data frame of the number of pairwise differences between each read and the consensus sequence, as well as the number of bases in each input read that did not contribute to the consensus sequence. It can assist in detecting incorrect reads, or reads with a lot of errors.

distanceMatrix A distance matrix of genetic distances (corrected with the JC model) between all of the input reads.

dendrogram A list storing cluster groups in a data frame and a dendrogram object depicting the distance.matrix. Users can use plot() to see the dendrogram.

indelsDF If users specified a reference sequence via refAminoAcidSeq, then this will be a data frame describing the number of indels and deletions that were made to each of the input reads in order to correct frameshift mutations.

stopCodonsDF If users specified a reference sequence via refAminoAcidSeq, then this will be a data frame describing the number of stop codons in each read.

secondaryPeakDF A data frame with one row for each column in the alignment that contained more than one secondary peak. The data frame has three columns: the column number of the alignment; the number of secondary peaks in that column; and the bases (with IUPAC ambiguity codes representing secondary peak calls) in that column represented as a string.

```

# S4 method for signature 'SangerContig'

```r
generateReportSC(
  object, outputDir,)
```
includeSangerRead = TRUE,
colors,
navigationAlignmentFN = NULL
)

Arguments

object          A SangerContig S4 instance.
outputDir       The output directory of the generated HTML report.
includeSangerRead
The parameter that decides whether to include SangerRead level report. The
value is TRUE or FALSE and the default is TRUE.

colors          A vector for users to set the colors of (A, T, C, G, else). There are three options
for users to choose from. 1. "default": (green, blue, black, red, purple). 2.
"cb_friendly": ((0, 0, 0), (199, 199, 199), (0, 114, 178), (213, 94, 0), (204, 121,
167)). 3. Users can set their own colors with a vector with five elements.

navigationAlignmentFN
The internal parameter passed to HTML report. Users should not modify this
parameter on their own.

Value

The output absolute path to the SangerContig’s HTML file.

Examples

data("sangerContigData")
## Not run:
generateReportSC(sangerContigData)
generateReportSC(sangerContigData, colors="cb_friendly")
## End(Not run)

Description

A SangerContig method which launches Shiny app for SangerContig instance.

Usage

## S4 method for signature 'SangerContig'
launchAppSC(object, outputDir = NULL, colors = "default")
Arguments

- **object**: A SangerContig S4 instance.
- **outputDir**: The output directory of the saved new SangerContig S4 instance.
- **colors**: A vector for users to set the colors of (A, T, C, G, else). There are three options for users to choose from. 1. "default": (green, blue, black, red, purple). 2. "cb_friendly": ((0, 0, 0), (199, 199, 199), (0, 114, 178), (213, 94, 0), (204, 121, 167)). 3. Users can set their own colors with a vector with five elements.

Value

A shiny.appobj object.

Examples

data("sangerContigData")
RShinySC <- launchAppSC(sangerContigData)
RShinySC <- launchAppSC(sangerContigData, colors="cb_friendly")

Description

A SangerContig method which generates summary table for SangerContig instance

Usage

```r
## S4 method for signature 'SangerContig'
readTable(object, indentation = 0)
```

Arguments

- **object**: A SangerContig S4 instance.
- **indentation**: The indentation for different level printing.

Value

None
Examples

```r
data(sangerReadFData)
data(sangerContigData)
data(sangerAlignmentData)
## Not run:
readTable(sangerReadFData)
readTable(sangerContigData)
readTable(sangerAlignmentData)

## End(Not run)
```

---

### Description

A `SangerContig` method which updates `QualityReport` parameter for each the `SangerRead` instance inside `SangerContig`.

### Usage

```r
## S4 method for signature 'SangerContig'
updateQualityParam(
  object,
  TrimmingMethod = "M1",
  M1TrimmingCutoff = 1e-04,
  M2CutoffQualityScore = NULL,
  M2SlidingWindowSize = NULL,
  processorsNum = NULL
)
```

### Arguments

- `object` A `SangerContig` S4 instance.
- `TrimmingMethod` The read trimming method for this `SangerRead`. The value must be "M1" (the default) or 'M2'.
- `M1TrimmingCutoff` The trimming cutoff for the Method 1. If `TrimmingMethod` is "M1", then the default value is 0.0001. Otherwise, the value must be `NULL`.
- `M2CutoffQualityScore` The trimming cutoff quality score for the Method 2. If `TrimmingMethod` is 'M2', then the default value is 20. Otherwise, the value must be `NULL`. It works with `M2SlidingWindowSize`. 
- `M2SlidingWindowSize`
Trimming sliding window size for the Method 2. If `TrimmingMethod` is 'M2', then the default value is 10. Otherwise, the value must be NULL. It works with `M2CutoffQualityScore`.

The number of processors to use, or NULL (the default) for all available processors.

Value

A SangerContig instance.

Examples

data("sangerContigData")
## Not run:
updateQualityParam(sangerContigData,
    TrimmingMethod = "M2",
    M1TrimmingCutoff = NULL,
    M2CutoffQualityScore = 40,
    M2SlidingWindowSize = 15)
## End(Not run)

Description

A SangerContig method which writes sequences into Fasta files.

Usage

## S4 method for signature 'SangerContig'
writeFastaSC(
    object,
    outputDir = NULL,
    compress = FALSE,
    compression_level = NA,
    selection = "all"
)

Arguments

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>object</td>
<td>A SangerContig S4 instance.</td>
</tr>
<tr>
<td>outputDir</td>
<td>The output directory of generated FASTA files.</td>
</tr>
<tr>
<td>compress</td>
<td>Like for the save function in base R, must be TRUE or FALSE (the default),</td>
</tr>
<tr>
<td></td>
<td>or a single string specifying whether writing to the file is to use</td>
</tr>
<tr>
<td></td>
<td>compression. The only type of compression supported at the moment is &quot;gzip&quot;.</td>
</tr>
<tr>
<td></td>
<td>This parameter will be passed to writeXStringSet function in Biostrings</td>
</tr>
<tr>
<td></td>
<td>package.</td>
</tr>
</tbody>
</table>
compression_level
This parameter will be passed to writeXStringSet function in Biostrings package.

selection
This value can be all, reads_alignment, reads_unalignment or contig. It generates reads and the contig FASTA files.

Value
The output directory of FASTA files.

Examples

data("sangerContigData")
writeFastaSC(sangerContigData)

sangerContigData  SangerContig instance

Description
SangerContig instance

Usage

data(sangerContigData)

Author(s)
Kuan-Hao Chao

SangerRead  SangerRead

Description
the wrapper function for SangerRead
Usage

SangerRead(
    printLevel = "SangerRead",
    inputSource = "ABIF",
    readFeature = "",
    readFileName = "",
    fastaReadName = NULL,
    geneticCode = GENETIC_CODE,
    TrimmingMethod = "M1",
    M1TrimmingCutoff = 1e-04,
    M2CutoffQualityScore = NULL,
    M2SlidingWindowSize = NULL,
    baseNumPerRow = 100,
    heightPerRow = 200,
    signalRatioCutoff = 0.33,
    showTrimmed = TRUE
)

Arguments

inputSource  The input source of the raw file. It must be "ABIF" or "FASTA". The default value is "ABIF".
readFeature  The direction of the Sanger read. The value must be "Forward Read" or "Reverse Read".
readFileName The filename of the target ABIF file.
fastaReadName If inputSource is "FASTA", then this value has to be the name of the read inside the FASTA file; if inputSource is "ABIF", then this value is "" by default.
geneticCode  Named character vector in the same format as GENETIC_CODE (the default), which represents the standard genetic code. This is the code with which the function will attempt to translate your DNA sequences. You can get an appropriate vector with the getGeneticCode() function. The default is the standard code.
TrimmingMethod  The read trimming method for this SangerRead. The value must be "M1" (the default) or "M2". M1 is the modified Mott’s trimming algorithm that can also be found in Phred/Phrap and Biopython. M2 is like trimomatic’s sliding window method.
M1TrimmingCutoff The trimming cutoff for the Method 1. If TrimmingMethod is "M1", then the default value is 0.0001. Otherwise, the value must be NULL.
M2CutoffQualityScore The trimming cutoff quality score for the Method 2. If TrimmingMethod is 'M2', then the default value is 20. Otherwise, the value must be NULL. It works with M2SlidingWindowSize.
M2SlidingWindowSize The trimming sliding window size for the Method 2. If TrimmingMethod is 'M2', then the default value is 10. Otherwise, the value must be NULL. It works with M2CutoffQualityScore.
SangerRead-class

baseNumPerRow  It defines maximum base pairs in each row. The default value is 100.
heightPerRow  It defines the height of each row in chromatogram. The default value is 200.
signalRatioCutoff  The ratio of the height of a secondary peak to a primary peak. Secondary peaks higher than this ratio are annotated. Those below the ratio are excluded. The default value is 0.33.
showTrimmed  The logical value storing whether to show trimmed base pairs in chromatogram. The default value is TRUE.

Value

A SangerRead instance.

Author(s)

Kuan-Hao Chao

Examples

inputFilesPath <- system.file("extdata/", package = "sangeranalyseR")
A_chloroticaFdFN <- file.path(inputFilesPath,
  "Allolobophora_chlorotica",
  "ACHLO",
  "Ach1_ACHLO0006-09_1_F.ab1")
sangerRead <- SangerRead(
  printLevel = "SangerRead",
  inputSource = "ABIF",
  readFeature = "Forward Read",
  readFileName = A_chloroticaFdFN,
  geneticCode = GENETIC_CODE,
  TrimmingMethod = "M1",
  M1TrimmingCutoff = 0.0001,
  M2CutoffQualityScore = NULL,
  M2SlidingWindowSize = NULL,
  baseNumPerRow = 100,
  heightPerRow = 200,
  signalRatioCutoff = 0.33,
  showTrimmed = TRUE)

SangerRead-class  SangerRead

Description

An S4 class extending sangerseq S4 class which corresponds to a single ABIF file in Sanger sequencing.
Slots

objectResults This is the object that stores all information of the creation result.

inputSource The input source of the raw file. It must be "ABIF" or "FASTA". The default value is "ABIF".

readFeature The direction of the Sanger read. The value must be "Forward Read" or "Reverse Read".

readFileName The filename of the target input file.

fastaReadName If inputSource is "FASTA", then this value has to be the name of the read inside the FASTA file; if inputSource is "ABIF", then this value is NULL by default.

geneticCode Named character vector in the same format as GENETIC_CODE (the default), which represents the standard genetic code. This is the code with which the function will attempt to translate your DNA sequences. You can get an appropriate vector with the getGeneticCode() function. The default is the standard code.

abifRawData An S4 class containing all fields in the ABIF file. It is the abif class defined in sangerseqR package.

QualityReport A S4 class containing quality trimming related inputs and trimming results.

ChromatogramParam A S4 class containing chromatogram inputs.

primaryAASeqS1 A polypeptide translated from primary DNA sequence starting from the first nucleic acid.

primaryAASeqS2 A polypeptide translated from primary DNA sequence starting from the second nucleic acid.

primaryAASeqS3 A polypeptide translated from primary DNA sequence starting from the third nucleic acid.

primarySeqRaw The raw primary sequence from sangerseq class in sangerseqR package before base calling.

secondarySeqRaw The raw secondary sequence from sangerseq class in sangerseqR package before base calling.

peakPosMatrixRaw The raw peak position matrix from sangerseq class in sangerseqR package before base calling.

peakAmpMatrixRaw The raw peak amplitude matrix from sangerseq class in sangerseqR package before base calling.

Author(s)

Kuan-Hao Chao

Examples

## Simple example

```r
inputFilesPath <- system.file("extdata/", package = "sangeranalyseR")
A_chloroticaFFN <- file.path(inputFilesPath,
  "Allolobophora_chlorotica",
  "ACHLO",
  "Ach1_ACHLO006-09_1_F.ab1")
```
sangerReadF <- new("SangerRead",
    readFeature = "Forward Read",
    readFileName = A_chloroticaFFN)

## Input From ABIF file format
# Forward Read
A_chloroticaFFN <- file.path(inputFilesPath,
    "Allolobophora_chlorotica",
    "ACHLO",
    "Achl_ACHLO006-09_1_F.ab1")

sangerReadF <- new("SangerRead",
    printLevel = "SangerRead",
    inputSource = "ABIF",
    readFeature = "Forward Read",
    readFileName = A_chloroticaFFN,
    fastaReadName = NULL,
    geneticCode = GENETIC_CODE,
   TrimmingMethod = "M1",
    M1TrimmingCutoff = 0.0001,
    M2CutoffQualityScore = NULL,
    M2SlidingWindowSize = NULL,
    baseNumPerRow = 100,
    heightPerRow = 200,
    signalRatioCutoff = 0.33,
    showTrimmed = TRUE)

# Reverse Read
A_chloroticaRFN <- file.path(inputFilesPath,
    "Allolobophora_chlorotica",
    "ACHLO",
    "Achl_ACHLO006-09_2_R.ab1")

sangerReadR <- new("SangerRead",
    inputSource = "ABIF",
    readFeature = "Reverse Read",
    readFileName = A_chloroticaRFN,
    geneticCode = GENETIC_CODE,
    TrimmingMethod = "M1",
    M1TrimmingCutoff = 0.0001,
    M2CutoffQualityScore = NULL,
    M2SlidingWindowSize = NULL,
    baseNumPerRow = 100,
    heightPerRow = 200,
    signalRatioCutoff = 0.33,
    showTrimmed = TRUE)

## Input From FASTA file format
# Forward Read
inputFilesPath <- system.file("extdata/", package = "sangeranalyseR")
A_chloroticaFFNfa <- file.path(inputFilesPath,
    "fasta",
    "SangerRead",
    "Achl_ACHLO006-09_1_F.fa")
readNameFfa <- "Achl_ACHLO0006-09_1_F"
sangerReadFfa <- new("SangerRead",
    inputSource = "FASTA",
    readFeature = "Forward Read",
    readFileName = A_chloroticaFFNfa,
    fastaReadName = readNameFfa,
    geneticCode = GENETIC_CODE)

# Reverse Read
A_chloroticaRFNfa <- file.path(inputFilesPath,
    "fasta",
    "SangerRead",
    "Achl_ACHLO0006-09_2_R.fa")
readNameRfa <- "Achl_ACHLO0006-09_2_R"
sangerReadRfa <- new("SangerRead",
    inputSource = "FASTA",
    readFeature = "Reverse Read",
    readFileName = A_chloroticaRFNfa,
    fastaReadName = readNameRfa,
    geneticCode = GENETIC_CODE)

---

### Description

A SangerRead method which generates final reports of the SangerRead instance.

#### Usage

```r
## S4 method for signature 'SangerRead'
genenerateReportSR(
    object,            # A SangerRead S4 instance.
    outputDir,         # The output directory of the generated HTML report.
    colors,            # A vector for users to set the colors of (A, T, C, G, else). There are three options for users to choose from. 1. "default": (green, blue, black, red, purple). 2. "cb_friendly": ((0, 0, 0), (199, 199, 199), (0, 114, 178), (213, 94, 0), (204, 121, 167)). 3. Users can set their own colors with a vector with five elements.
)```
navigationContigFN

The internal parameter passed to HTML report. Users should not modify this parameter on their own.

navigationAlignmentFN

The internal parameter passed to HTML report. Users should not modify this parameter on their own.

Value

The output absolute path to the SangerRead’s HTML file.

Examples

data("sangerReadFData")
## Not run:
generateReportSR(sangerReadFData, "/Documents")
generateReportSR(sangerReadFData, colors="cb_friendly")
## End(Not run)

SangerRead-class-MakeBaseCalls

MakeBaseCalls

Description

A SangerRead method which does base calling on SangerRead instance

Usage

## S4 method for signature 'SangerRead'
MakeBaseCalls(object, signalRatioCutoff = 0.33)

Arguments

object

A SangerRead S4 instance.

signalRatioCutoff

The ratio of the height of a secondary peak to a primary peak. Secondary peaks higher than this ratio are annotated. Those below the ratio are excluded. The default value is 0.33.

Value

A SangerRead instance.

Examples

data("sangerReadFData")
newSangerReadFData <- MakeBaseCalls(sangerReadFData, signalRatioCutoff = 0.22)
Description

A SangerRead method which creates quality base interactive plot.

Usage

```r
## S4 method for signature 'SangerRead'
qualityBasePlot(object)
```

Arguments

- `object` A SangerRead S4 instance.

Value

A quality plot.

Examples

```r
data("sangerReadFData")
## Not run:
qualityBasePlot(sangerReadFData)
## End(Not run)
```

Description

A SangerRead method which generates summary table for SangerRead instance.

Usage

```r
## S4 method for signature 'SangerRead'
readTable(object, indentation = 0)
```

Arguments

- `object` A SangerRead S4 instance.
- `indentation` The indentation for different level printing.
Value
None

Examples

data(sangerReadFData)
data(sangerContigData)
data(sangerAlignmentData)
## Not run:
readTable(sangerReadFData)
readTable(sangerContigData)
readTable(sangerAlignmentData)
## End(Not run)

Description
A SangerRead method which updates QualityReport parameter inside the SangerRead.

Usage

## S4 method for signature 'SangerRead'
updateQualityParam(
  object,
  TrimmingMethod = "M1",
  M1TrimmingCutoff = 1e-04,
  M2CutoffQualityScore = NULL,
  M2SlidingWindowSize = NULL
)

Arguments

object A SangerRead S4 instance.
TrimmingMethod The read trimming method for this SangerRead. The value must be "M1" (the default) or 'M2'.
M1TrimmingCutoff The trimming cutoff for the Method 1. If TrimmingMethod is "M1", then the default value is 0.0001. Otherwise, the value must be NULL.
M2CutoffQualityScore The trimming cutoff quality score for the Method 2. If TrimmingMethod is 'M2', then the default value is 20. Otherwise, the value must be NULL. It works with M2SlidingWindowSize.
M2SlidingWindowSize
The trimming sliding window size for the Method 2. If TrimmingMethod is 'M2', then the default value is 10. Otherwise, the value must be NULL. It works with M2CutoffQualityScore.

Value
A SangerRead instance.

Examples
```r
data("sangerReadFData")
updateQualityParam(sangerReadFData, 
  TrimmingMethod = "M2", 
  M1TrimmingCutoff = NULL, 
  M2CutoffQualityScore = 40, 
  M2SlidingWindowSize = 15)
```

Description
A SangerRead method which writes the sequence into Fasta files.

Usage
```r
## S4 method for signature 'SangerRead'
writeFastaSR(
  object, 
  outputDir = NULL, 
  compress = FALSE, 
  compression_level = NA
)
```

Arguments
- **object**: A SangerRead S4 instance.
- **outputDir**: The output directory of the generated FASTA file.
- **compress**: Like for the save function in base R, must be TRUE or FALSE (the default), or a single string specifying whether writing to the file is to use compression. The only type of compression supported at the moment is "gzip". This parameter will be passed to writeXStringSet function in Biostrings package.
- **compression_level**: This parameter will be passed to writeXStringSet function in Biostrings package.
Value

The output absolute path to the FASTA file.

Examples

data("sangerReadFData")
writeFastaSR(sangerReadFData)

Description

SangerRead instance

Usage

data(sangerReadFData)

Author(s)

Kuan-Hao Chao

updateQualityParam

Method updateQualityParam

Description

Method updateQualityParam

Usage

updateQualityParam(
    object,
    TrimmingMethod = "M1",
    M1TrimmingCutoff = 1e-04,
    M2CutoffQualityScore = NULL,
    M2SlidingWindowSize = NULL,
    ...
)

Arguments

object A QualityReport, SangerRead, SangerContig, or SangerAlignment S4 instance.

TrimmingMethod The read trimming method for this SangerRead. The value must be "M1" (the default) or 'M2'.

M1TrimmingCutoff The trimming cutoff for the Method 1. If TrimmingMethod is 'M1', then the default value is 0.0001. Otherwise, the value must be NULL.

M2CutoffQualityScore The trimming cutoff quality score for the Method 2. If TrimmingMethod is 'M2', then the default value is 20. Otherwise, the value must be NULL. It works with M2SlidingWindowSize.

M2SlidingWindowSize The trimming sliding window size for the Method 2. If TrimmingMethod is 'M2', then the default value is 10. Otherwise, the value must be NULL. It works with M2CutoffQualityScore.

... Further updateQualityParam-related parameters.

Value

A QualityReport, SangerRead, SangerContig, or SangerAlignment instance.

Examples

data(qualityReportData)
data(sangerReadFData)
data(sangerContigData)
data(sangerAlignmentData)
## Not run:
updateQualityParam(qualityReportData, 
   TrimmingMethod = "M2", 
   M1TrimmingCutoff = NULL, 
   M2CutoffQualityScore = 40, 
   M2SlidingWindowSize = 15)
updateQualityParam(sangerReadFData, 
   TrimmingMethod = "M2", 
   M1TrimmingCutoff = NULL, 
   M2CutoffQualityScore = 40, 
   M2SlidingWindowSize = 15)
updateQualityParam(sangerContigData, 
   TrimmingMethod = "M2", 
   M1TrimmingCutoff = NULL, 
   M2CutoffQualityScore = 40, 
   M2SlidingWindowSize = 15)
updateQualityParam(sangerAlignmentData, 
   TrimmingMethod = "M2", 
   M1TrimmingCutoff = NULL, 
   M2CutoffQualityScore = 40, 
   M2SlidingWindowSize = 15)
## End(Not run)
Method writeFasta

Description

A method which writes FASTA files of the SangerRead, SangerContig, and SangerAlignment instance.

Usage

writeFasta(
  object,
  outputDir = NULL,
  compress = FALSE,
  compression_level = NA,
  selection = "all"
)

Arguments

object A SangerRead, SangerContig, or SangerAlignment S4 instance.
outputDir The output directory of generated FASTA files.
compress Like for the save function in base R, must be TRUE or FALSE (the default), or a single string specifying whether writing to the file is to use compression. The only type of compression supported at the moment is "gzip". This parameter will be passed to writeXStringSet function in Biostrings package.
compression_level This parameter will be passed to writeXStringSet function in Biostrings package.
selection This parameter will be passed to writeFastaSC or writeFastaSA.

Value

A SangerRead, SangerContig, or SangerAlignment object.

Author(s)

Kuan-Hao Chao

Examples

data(sangerReadFData)
data(sangerContigData)
data(sangerAlignmentData)
## Not run:
writeFasta(sangerReadFData)
writeFasta(sangerContigData)
writeFastaSA

writeFasta(sangerAlignmentData)
## End(Not run)

---

**Method writeFastaSA**

**Description**

Method writeFastaSA

**Usage**

```r
writeFastaSA(
  object,
  outputDir = NULL,
  compress = FALSE,
  compression_level = NA,
  selection = "all"
)
```

**Arguments**

- `object` A SangerAlignment S4 instance.
- `outputDir` The output directory of generated FASTA files.
- `compress` Like for the save function in base R, must be TRUE or FALSE (the default), or a single string specifying whether writing to the file is to use compression. The only type of compression supported at the moment is "gzip". This parameter will be passed to writeXStringSet function in Biostrings package.
- `compression_level` This parameter will be passed to writeXStringSet function in Biostrings package.
- `selection` This value can be all, contigs_alignment, contigs_unalignment or all_reads. It generates reads and contigs FASTA files.

**Value**

The output directory of FASTA files.

**Examples**

```r
data(sangerAlignmentData)
writeFastaSA(sangerAlignmentData)
```
Method writeFastaSC

Description
Method writeFastaSC

Usage
writeFastaSC(
  object,
  outputDir = NULL,
  compress = FALSE,
  compression_level = NA,
  selection = "all"
)

Arguments

object
A SangerContig S4 instance.

outputDir
The output directory of generated FASTA files.

compress
Like for the save function in base R, must be TRUE or FALSE (the default), or a single string specifying whether writing to the file is to use compression. The only type of compression supported at the moment is "gzip". This parameter will be passed to writeXStringSet function in Biostrings package.

compression_level
This parameter will be passed to writeXStringSet function in Biostrings package.

selection
This value can be all, reads_alignment, reads_unalignment or contig. It generates reads and the contig FASTA files.

Value
The output directory of FASTA files.

Examples

data(sangerContigData)
writeFastaSC(sangerContigData)
Method writeFastaSR

Usage

writeFastaSR(
  object,
  outputDir = NULL,
  compress = FALSE,
  compression_level = NA
)

Arguments

- **object**: A SangerRead S4 instance.
- **outputDir**: The output directory of the generated FASTA file.
- **compress**: Like for the `save` function in base R, must be TRUE or FALSE (the default), or a single string specifying whether writing to the file is to use compression. The only type of compression supported at the moment is "gzip". This parameter will be passed to `writeXStringSet` function in Biostrings package.
- **compression_level**: This parameter will be passed to `writeXStringSet` function in Biostrings package.

Value

The output absolute path to the FASTA file.

Examples

```r
data(sangerReadFData)
writeFastaSR(sangerReadFData)
```
