

# Package ‘curatedTCGAData’

February 6, 2025

**Type** Package

**Title** Curated Data from The Cancer Genome Atlas (TCGA) as  
MultiAssayExperiment Objects

**Version** 1.28.1

**Description** This package provides publicly available data from The Cancer Genome Atlas (TCGA) as MultiAssayExperiment objects. MultiAssayExperiment integrates multiple assays (e.g., RNA-seq, copy number, mutation, microRNA, protein, and others) with clinical / pathological data. It also links assay barcodes with patient identifiers, enabling harmonized subsetting of rows (features) and columns (patients / samples) across the entire multi-omics experiment.

**License** Artistic-2.0

**BugReports** <https://github.com/waldronlab/curatedTCGAData/issues>

**Depends** R (>= 4.4.0), MultiAssayExperiment

**Imports** AnnotationHub, ExperimentHub, HDF5Array, methods, S4Vectors,  
stats, SummarizedExperiment, utils

**Suggests** BiocStyle, knitr, RaggedExperiment, readr, rmarkdown,  
TCGAutils, testthat

**VignetteBuilder** knitr

**biocViews** Homo\_sapiens\_Data, ReproducibleResearch, CancerData,  
ExperimentHub

**Encoding** UTF-8

**RoxygenNote** 7.3.1

**Date** 2024-10-17

**git\_url** <https://git.bioconductor.org/packages/curatedTCGAData>

**git\_branch** RELEASE\_3\_20

**git\_last\_commit** 4db112a

**git\_last\_commit\_date** 2024-11-13

**Repository** Bioconductor 3.20

**Date/Publication** 2025-02-06

**Author** Marcel Ramos [aut, cre] (<<https://orcid.org/0000-0002-3242-0582>>),  
 Levi Waldron [ctb],  
 Lucas Schiffer [ctb],  
 Ludwig Geistlinger [ctb],  
 Valerie Obenchain [ctb],

curatedTCGAData-package

*curatedTCGAData-package*

---

## Description

The curatedTCGAData package provides a convenient and user-friendly interface for The Cancer Genome Atlas data from the Firehose GDAC Pipeline. Please note that *\_most\_* of the data from the GDAC Firehose pipeline uses the ‘hg19’ reference genome (except for a few cancers; refer to <https://confluence.broadinstitute.org/display/GDAC/FAQ>).

It is highly recommended to use the ‘TCGAutils’ companion package. It provides convenience functions for manipulating curatedTCGAData objects. See package for more details (<http://bioconductor.org/packages/TCGAutils>).

## diseaseCodes

The following are the TCGA disease codes and full names as posted on the official website (<https://gdc.cancer.gov/resources-tcga-users/tcga-code-tables/tcga-study-abbreviations>).

Study Abbreviation	Study Name
1 ACC	Adrenocortical Carcinoma
2 BLCA	Bladder Urothelial Carcinoma
3 BRCA	Breast Invasive Carcinoma
4 CESC	Cervical Squamous Cell Carcinoma And Endocervical Adenocarcinoma
5 CHOL	Cholangiocarcinoma
6 CNTL	Controls
7 COAD	Colon Adenocarcinoma
8 DLBC	Lymphoid Neoplasm Diffuse Large B-cell Lymphoma
9 ESCA	Esophageal Carcinoma
10 GBM	Glioblastoma Multiforme
11 HNSC	Head And Neck Squamous Cell Carcinoma
12 KICH	Kidney Chromophobe
13 KIRC	Kidney Renal Clear Cell Carcinoma
14 KIRP	Kidney Renal Papillary Cell Carcinoma
15 LAML	Acute Myeloid Leukemia
16 LGG	Brain Lower Grade Glioma

17	LIHC	Liver Hepatocellular Carcinoma
18	LUAD	Lung Adenocarcinoma
19	LUSC	Lung Squamous Cell Carcinoma
20	MESO	Mesothelioma
21	OV	Ovarian Serous Cystadenocarcinoma
22	PAAD	Pancreatic Adenocarcinoma
23	PCPG	Pheochromocytoma And Paraganglioma
24	PRAD	Prostate Adenocarcinoma
25	READ	Rectum Adenocarcinoma
26	SARC	Sarcoma
27	SKCM	Skin Cutaneous Melanoma
28	STAD	Stomach Adenocarcinoma
29	TGCT	Testicular Germ Cell Tumors
30	THCA	Thyroid Carcinoma
31	THYM	Thymoma
32	UCEC	Uterine Corpus Endometrial Carcinoma
33	UCS	Uterine Carcinosarcoma
34	UVM	Uveal Melanoma

curatedTCGAData

*Create a MultiAssayExperiment from specific assays and cohorts*

---

## Description

curatedTCGAData assembles data on-the-fly from ExperimentHub to provide cohesive [MultiAssayExperiment](#) container objects. All the user has to do is to provide TCGA disease code(s) and assay types. It is highly recommended to use the companion package TCGAutils, developed to work with TCGA data specifically from curatedTCGAData and some flat files.

## Usage

```
curatedTCGAData(
  diseaseCode = "*",
  assays = "*",
  version,
  dry.run = TRUE,
  verbose = TRUE,
```

```
    ...
  )
```

### Arguments

diseaseCode	character()	A vector of TCGA cancer cohort codes (e.g., COAD)
assays	character()	A vector of TCGA assays, glob matches allowed; see below for more details
version	character(1)	One of 1.1.38, 2.0.1, 2.1.0, or 2.1.1 indicating the data version to obtain from ExperimentHub. Version 2.1.1 includes various improvements as well as the addition of the RNASeq2Gene assay and subtype updates. See version section details.
dry.run	logical(1)	Whether to return the dataset names before actual download (default TRUE)
verbose	logical(1)	Whether to show the dataset currently being (down)loaded (default TRUE)
...		Additional arguments passed on to the <a href="#">ExperimentHub</a> constructor

### Details

This function will check against available resources in ExperimentHub. Only the latest runDate ("2016-01-28") is supported. Use the `dry.run = FALSE` to download remote datasets and build an integrative [MultiAssayExperiment](#) object. For a list of 'diseaseCodes', see the [curatedTCGAData-package](#) help page.

### Value

a [MultiAssayExperiment](#) of the specified assays and cancer codes or informative data.frame of resources when `dry.run` is TRUE

### Available Assays

Below is a list of partial ExperimentList assay names and their respective description. These assays can be entered as part of the assays argument in the main function. Partial glob matches are allowed such as: 'CN\*' for "CNASeq", "CNASNP", "CNVSNP" assays. Credit: Ludwig G.

ExperimentList data types	Description
SummarizedExperiment*	
RNASeqGene	Gene expression values
RNASeq2Gene	RSEM TPM gene expression values
RNASeq2GeneNorm	Upper quartile log2 normalized RSEM TPM gene expression values
miRNAArray	Probe-level miRNA expression values
miRNASeqGene	Gene-level log2 RPM miRNA expression values
mRNAArray	Unified gene-level mRNA expression values
mRNAArray_huex	Gene-level mRNA expression values from Affymetrix Human Exon Array
mRNAArray_TX_g4502a	Gene-level mRNA expression values from Agilent 244K Array
mRNAArray_TX_ht_hg_u133a	Gene-level mRNA expression values from Affymetrix

	Human Genome U133 Array
GISTIC_AllByGene	Gene-level GISTIC2 copy number values
GISTIC_ThresholdedByGene	Gene-level GISTIC2 thresholded discrete copy number values
RPPAArray	Reverse Phase Protein Array normalized protein expression values
RangedSummarizedExperiment	
GISTIC_Peaks	GISTIC2 thresholded discrete copy number values in recurrent peak regions
SummarizedExperiment with HDF5Array DelayedMatrix	
Methylation_methyl27	Probe-level methylation beta values from Illumina HumanMethylation 27K BeadChip
Methylation_methyl450	Probe-level methylation beta values from Infinium HumanMethylation 450K BeadChip
RaggedExperiment	
CNASNP	Segmented somatic Copy Number Alteration calls from SNP array
CNVSNP	Segmented germline Copy Number Variant calls from SNP Array
CNASeq	Segmented somatic Copy Number Alteration calls from low pass DNA Sequencing
Mutation*	Somatic mutations calls
CNACGH_CGH_hg_244a	Segmented somatic Copy Number Alteration calls from CGH Agilent Microarray 244A
CNACGH_CGH_hg_415k_g4124a	Segmented somatic Copy Number Alteration calls from CGH Agilent Microarray 415K

\* All can be converted to RangedSummarizedExperiment (except RPPAArray) with TCGAutils

## version

Version 2.1.1 provides a couple of corrections to the colData for ovarian cancer (OV) and skin cancer (SKCM). In these new data, the cancer subtype variables are fully available. One get obtain the mapping of columns to subtypes in the colData with the getSubtypeMap function in TCGAutils.

Version 2.1.0 provides gene-level log<sub>2</sub> RPM miRNA expression values for miRNASeqGene data log<sub>2</sub> normalized RSEM for RNASeq2GeneNorm assays. Previously, the data provided were read counts and normalized counts, respectively. See issue [#53 on GitHub](#) for additional details.

The new version 2.0.1 includes various improvements including an additional assay that provides RNASeq2Gene data as RSEM TPM gene expression values (issue #38). Additional changes include genomic information for RaggedExperiment type data objects where '37' is now 'GRCh37' as reported in issue #40. Datasets (e.g., OV, GBM) that contain multiple assays that could be merged are now provided as merged assays (issue #27). We corrected an issue where mRNAArray assays were returning DataFrames instead of matrix type data (issue #31). Version 1.1.38 provides the original run of curatedTCGAData and is provided due to legacy reasons.

## Description

A document describing the TCGA cancer code

## Details

```

> experiments( LIHC )
ExperimentList class object of length 12:
 [1] LIHC_CNASNP-20160128: RaggedExperiment with 363628 rows and 760 columns
 [2] LIHC_CNVSNP-20160128: RaggedExperiment with 93328 rows and 760 columns
 [3] LIHC_GISTIC_AllByGene-20160128: SummarizedExperiment with 24776 rows and 370 columns
 [4] LIHC_GISTIC_Peaks-20160128: RangedSummarizedExperiment with 59 rows and 370 columns
 [5] LIHC_GISTIC_ThresholdedByGene-20160128: SummarizedExperiment with 24776 rows and 370 columns
 [6] LIHC_Mutation-20160128: RaggedExperiment with 27892 rows and 198 columns
 [7] LIHC_RNASeq2Gene-20160128: SummarizedExperiment with 20501 rows and 423 columns
 [8] LIHC_RNASeqGene-20160128: SummarizedExperiment with 20502 rows and 26 columns
 [9] LIHC_RPPAArray-20160128: SummarizedExperiment with 219 rows and 184 columns
[10] LIHC_miRNASeqGene-20160128: SummarizedExperiment with 1046 rows and 424 columns
[11] LIHC_RNASeq2GeneNorm-20160128: SummarizedExperiment with 17690 rows and 423 columns
[12] LIHC_Methylation-20160128: SummarizedExperiment with 485577 rows and 429 columns
